PROJECT: Miami Beach Historic District Resiliency and Adaption Guidelines
RECIPIENT: City of Miami Beach
FRCP FUNDS: $75,000

SUMMARY: The City of Miami Beach (City) is vulnerable to the impacts of sea level rise, coastal flooding, erosion, and ecosystem changes. The City’s iconic art deco buildings are representative of designated historic districts and are a draw for international tourism. Historic properties are at greater risk than buildings constructed under today’s stricter building codes. To protect invaluable historic buildings and create innovative solutions that can be applied state-wide, the City will conduct a planning process that will produce resilience guidelines. The guidelines will present options for each type of construction, providing property owners with step-by-step actions and adaptation choices.
