SUMMARY: The contractor will create a Stormwater Master Plan to provide the Town of Lake Park with a stormwater management planning tool that will allow for the rehabilitation of the existing drainage system over 20 years and provide the Town with a forward-looking approach and a framework through which sustainable redevelopment practices can be deployed as the Town progresses through its natural growth and redevelopment cycle. To do so, the contractor will examine existing data, analyze the performance of the stormwater and drainage swale infrastructure, conceptualize alternatives, make recommendations for rehabilitation and development a capital improvement program for project implementation.
