Exotic Plant Removal	Page 23
Exotic and Nuisance Animal Removal	Page 39
Marine Turtle Nesting	Page 75

2012 – 2013 Resource Management Annual Report Executive Summary

Prescribed Burning and Wildfires

- FPS burned 56,881 acres – 6,417 acres fewer than the minimum ecological target and 83% of the acres planned
- The number fire-type acres in rotation (not backlogged) increased by 3%
- FPS conducted 374 prescribed burns, 57 more than the previous year
- Prescribed burns were conducted on 200 days during the fiscal year, well above the 10-year average of 140
- 35 wildfires accounted for 1,505 acres (2.6%) of the total acres burned
- 88% of parks with acres planned conducted at least one prescribed burn, 11% more than the previous year
- 38 parks exceeded the minimum ecological target, five more than the previous year
- Two districts achieved 100% of their planned goals, with District Two reaching an all-time high of 6,202 acres
- 1,159 acres were mechanically treated in 33 parks for habitat improvement or fuel reduction

The division was fully prepared for a strike team request from The Florida Forest Service but received no requests as heavy rains eliminated much of the early spring drought. However, one of the strike teams was deployed by DRP in May to assist with mop-up of fires at St. Sebastian River and Paynes Prairie to ensure that no smoke impacted Interstate 95 or Interstate 75/US Hwy 441. The same team also traveled to Kissimmee Prairie and assisted with burning critical dry prairie to benefit the federally endangered Florida grasshopper sparrow. Strike teams deployments continue to provide excellent opportunities for fire staff to gain experience and hone their skills in unique and often complicated fire-management situations.

Exotic Plant Removal

- Development and expansion of the Invasive Exotic Plant Database has allowed for the mapping of exotic plant data through FDEP's MapDirect tool, adding a special component and providing another helpful tool for database users.
- Staff logged 2,922 additional infestations into the database during FY 12-13, indicating a firm commitment by field staff to the mapping effort which began in FY 09-10 and which serves as the foundation of the database. The magnitude of the task is tremendous given that there are more than 150 exotic species occupying more than 340,000 infested acres.
- While the number of infested acres treated (5,982) was slightly fewer than the previous year, slightly *more* (22,974) gross acres were "worked," reflecting an increased amount of effort required to treat the infested acres.
- A total of 141 parks reported treating exotics.
- During FY 12-13, the number of acres considered to be in "maintenance" dropped by only about 1.5%, a substantial improvement over last fiscal year's 10% decrease in maintenance condition and represents a positive step towards the ultimate goal of *increasing* the number of acres in maintenance condition.
- Staff prepared and submitted 36 proposals to their local invasive plant working groups for review and ranking along with other public lands projects. Twenty-seven FPS projects, valued at more than \$900,000, were chosen for funding.

Exotic and Nuisance Animal Removal

- 5,130 feral hogs were removed in FY 12-13, only five fewer than the highest year on record
- District Four removed the most hogs for FY 2012-2013 with a near-record-high of 2,427, continuing to maintain the highest average in hog removal statewide (more than 1,400 per year for the past 21 years).
- When analyzed by vertebrate class, herpetofaunal (amphibians and reptiles) species consistently represent the greatest variety of species, while mammals make up the greatest number of individuals removed.

In FY 2012-13, the division began experimenting with a new type of feral hog trap controlled by a remote camera. The new technology sends a live picture to an employee's phone allowing them to then remotely trigger and close the trap door. It is hoped that the use of this technology will enable managers to spend less time checking empty traps and improve the capture of entire feral hog groups thereby leaving no trap-shy animals behind. The upcoming fiscal year will see an expansion of this pilot project. Increasing trapping success while reducing staff time and wear and tear of park vehicles would represent two program improvements.

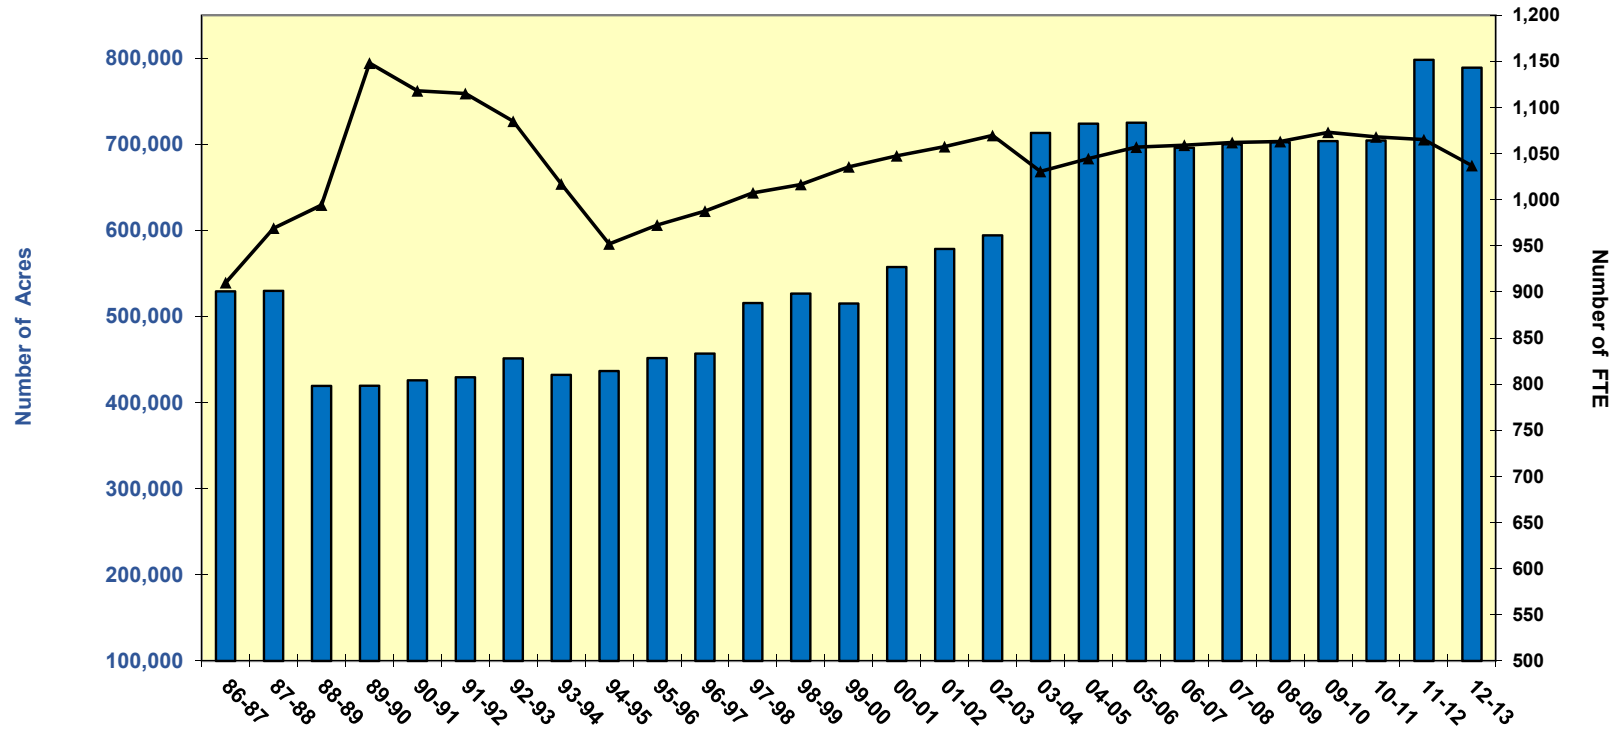

Marine Turtle Nesting

- 6,531 total nests were reported, the highest number on record for the second year in a row
- An all-time high number of Green turtle nests were recorded (2,172), more than double 2007's previous all-time high
- Roughly 104 miles of state park beaches were surveyed in 39 parks
- Only 178 nests were damaged by erosion from tropical weather systems, the fewest since 2010
- Nest depredation decreased from 9% in 2012 to 7% for 2013

The presence of a coyote on Little Talbot Island was documented for the first time via tracks and photographs. Park staff will be moving quickly to remove this dangerous nest predator prior to the next nesting season. For the fourth year in a row, the Sea Turtle Conservancy generously funded predator control work in two state parks. Educational 'turtle walks' continue to be conducted on many state parks nesting beaches and, although tightly regulated by FWC, provide unique opportunities for park visitors to observe nesting marine turtles. At Sebastian Inlet alone, more than 800 visitors participated, with turtles spotted 73% of the time.

Comparison of Staff to Acres Managed

The chart below show the changes over time in the number of full-time staff compared to the number of acres under the jurisdiction of the Division of Recreation and Parks.

Acres = Upland and submerged.

PLANNING AS OF JULY 1

- Fire-Type (FT) Acres:** Includes all natural communities where fire is an ecological process and any other zones being managed with fire.
- FT Acres in Rotation:** Fire-type acres that do not exceed maximum Fire Return Interval. That is, acres that are not backlogged. Formula: Fire-Type Acres less Backlog Acres.
- FT Target Acres:** Range of fire-type acres that need to be burned to remain in rotation. Formula: Sum of Acres by zone divided by maximum / minimum fire return interval.
- FT Acres Planned:** Fire-type acres in the fiscal year plan for burning. Formula: Sum of Annual Planned Acres.

ACCOMPLISHMENTS - ACRES BURNED (RX / WILDFIRE)

- Total:** Acres burned during the fiscal year, showing both prescribed and wildfire.
- Quarterly:** Acreage burned during each fiscal quarter, showing both prescribed and wildfire.
- Burn Count:** Number of prescribed fires and wildfires during the fiscal year. Each entry with a FFS Authorization counts as a single prescribed burn.
Each entry with 'Day of 1st Report' for wildfire counts as a single wildfire burn.

EVALUATION (Figures are performance indicators during the year and statistically valid on June 30.)

- FT Acres in Rotation:** Acreage that would be considered in rotation if no further burning for the fiscal year is done. Formula: Acres in Rotation (as of July 1) less acres that would become backlogged on June 30, plus acres burned during the fiscal year.
- % of Plan Met:** Percent of planned acres that were treated with fire. Formula: Annual Acres Treated Total divided by Acres Planned with a maximum value of 100%

Florida Park Service Prescribed Burning History 1981-2013

Notes About This Graph

1981: FPS began systematically tracking fire program accomplishments

2005: Fire-type acres under management increased with the addition Office of Coastal and Aquatic Managed Areas properties

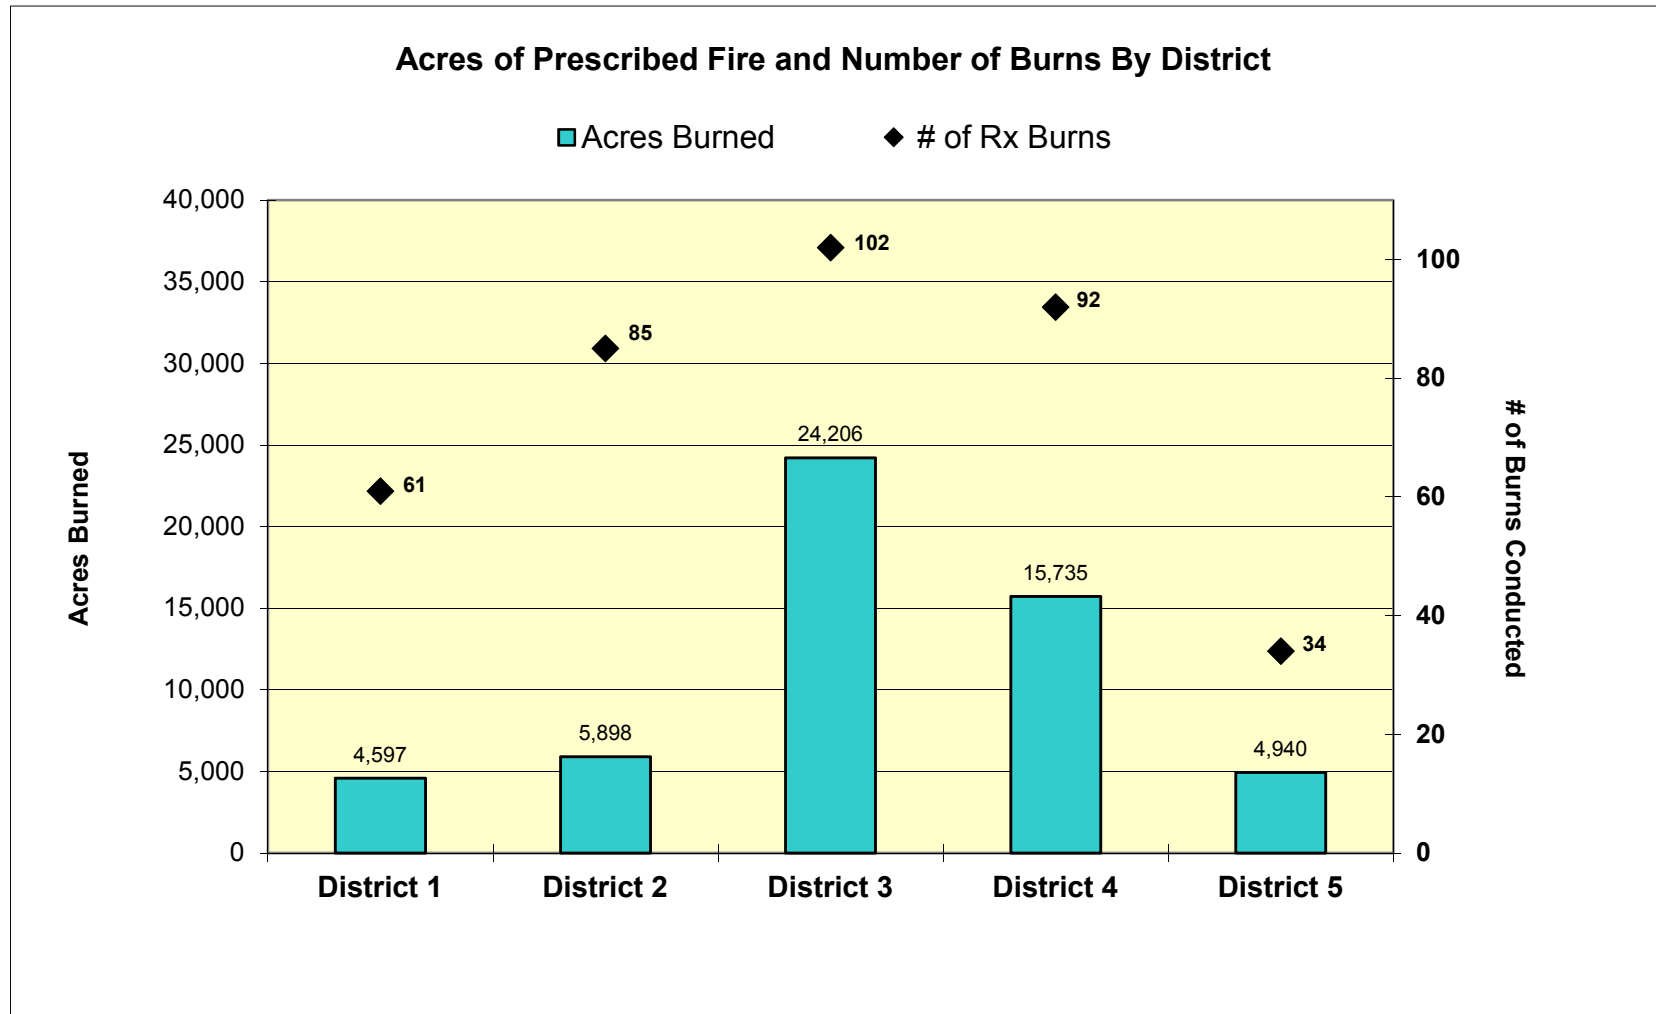

2005: Apparent increase in "Acres Planned" resulted from re-defining the plan to reflect ecological need rather than the operational plans

2007: Number of fire-type acres dropped significantly with the transfer of Tosohatchee State Reserve to FWC

2009: Began tracking fire management accomplishments with new, more accurate database; resumed tracking operational plans rather than ecological objective

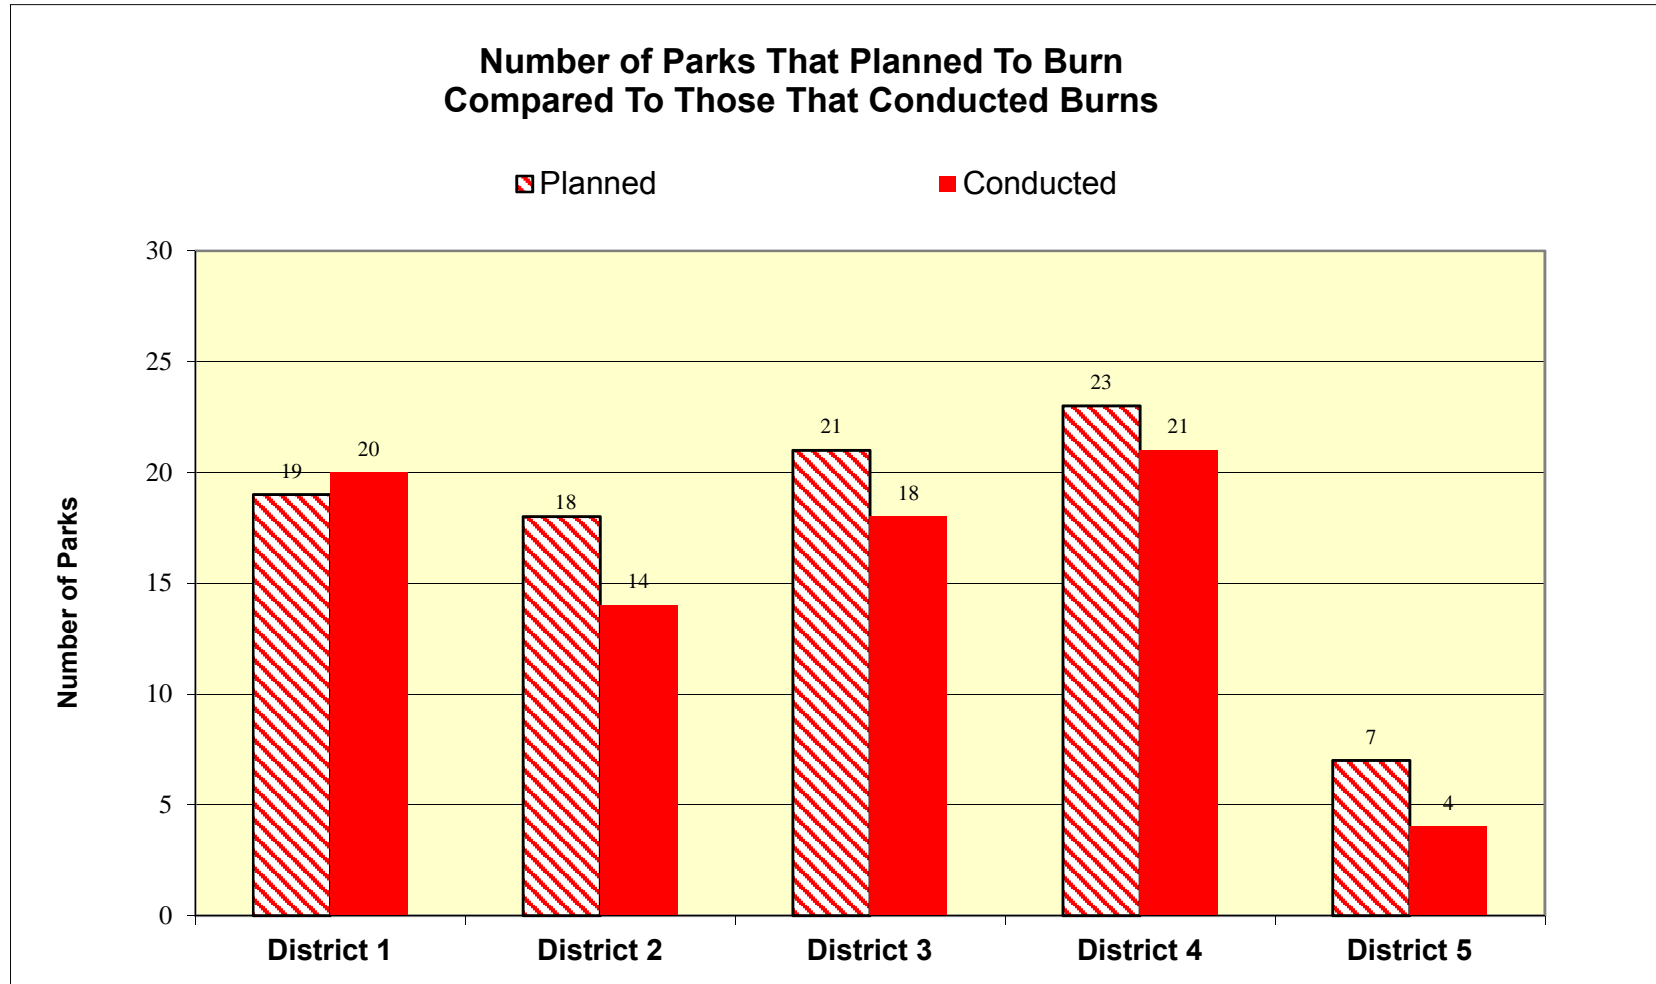

Florida Park Service
Annual Fire Report
Fiscal Year 2012-2013

The graph below represents the total number of acres managed with prescribed fire (excludes wildfires) and the number of prescribed burns conducted in each district during the fiscal year.

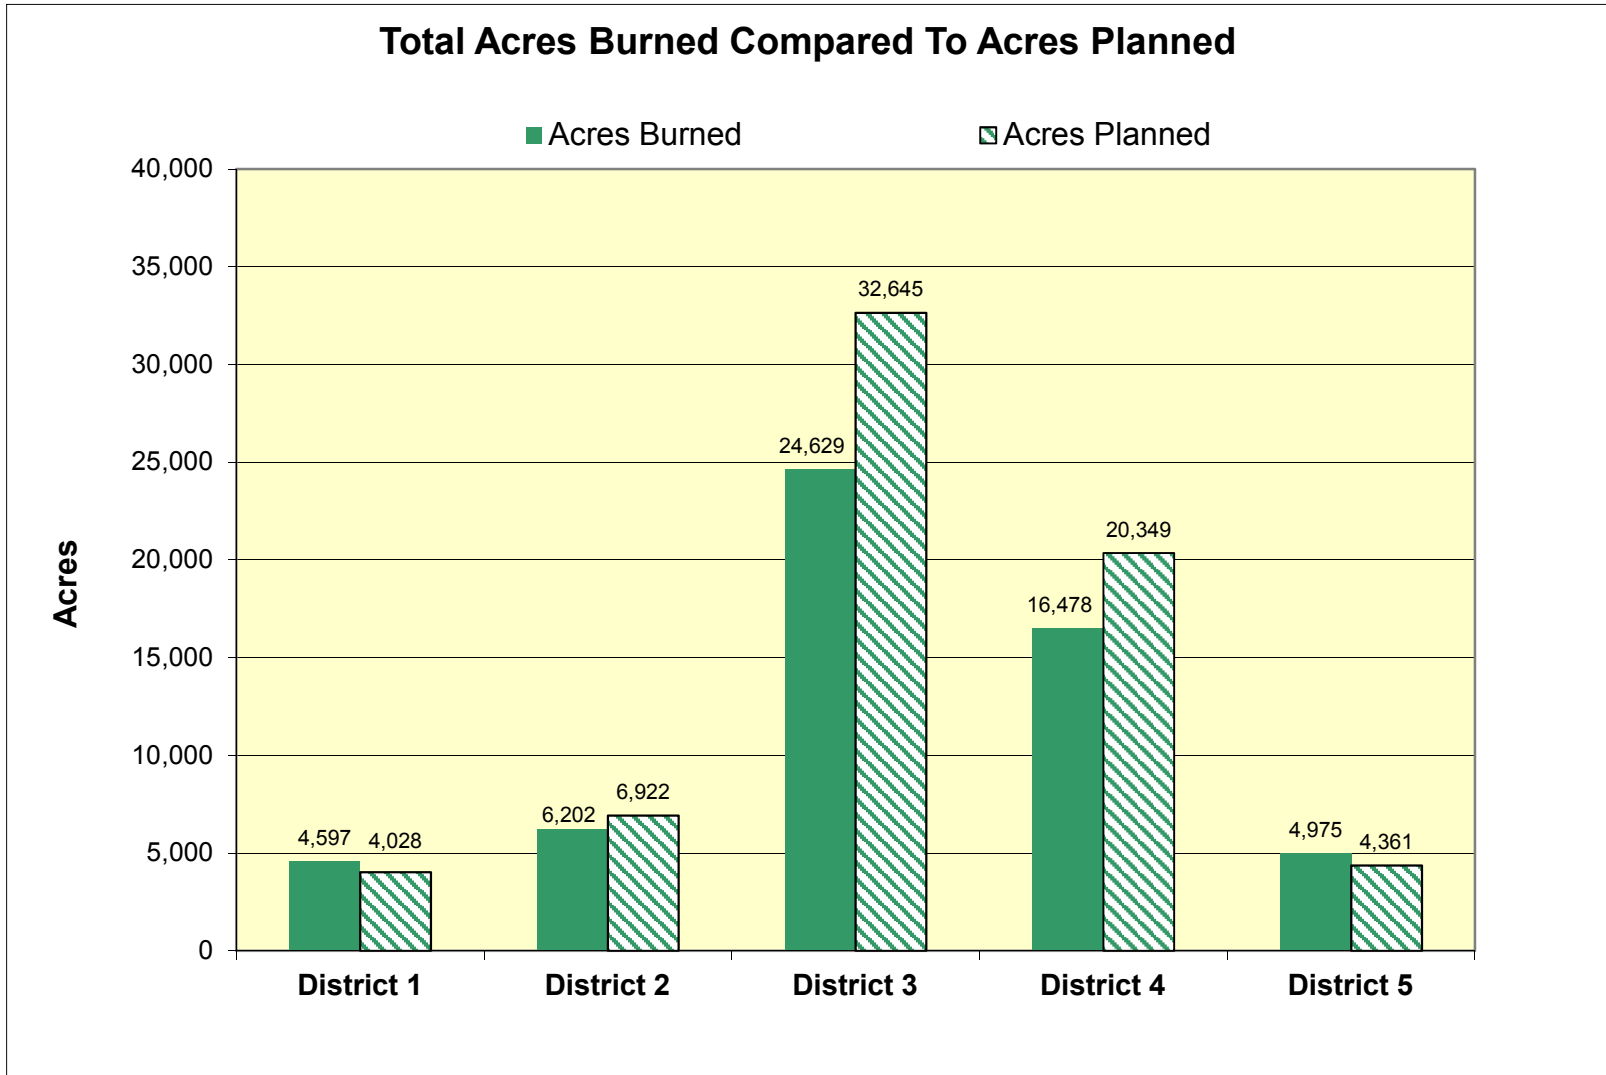

Florida Park Service
Annual Fire Report
Fiscal Year 2012-13

The graph below compares number of parks that planned to burn with the number that successfully conducted at least one prescribed burn during the fiscal year.

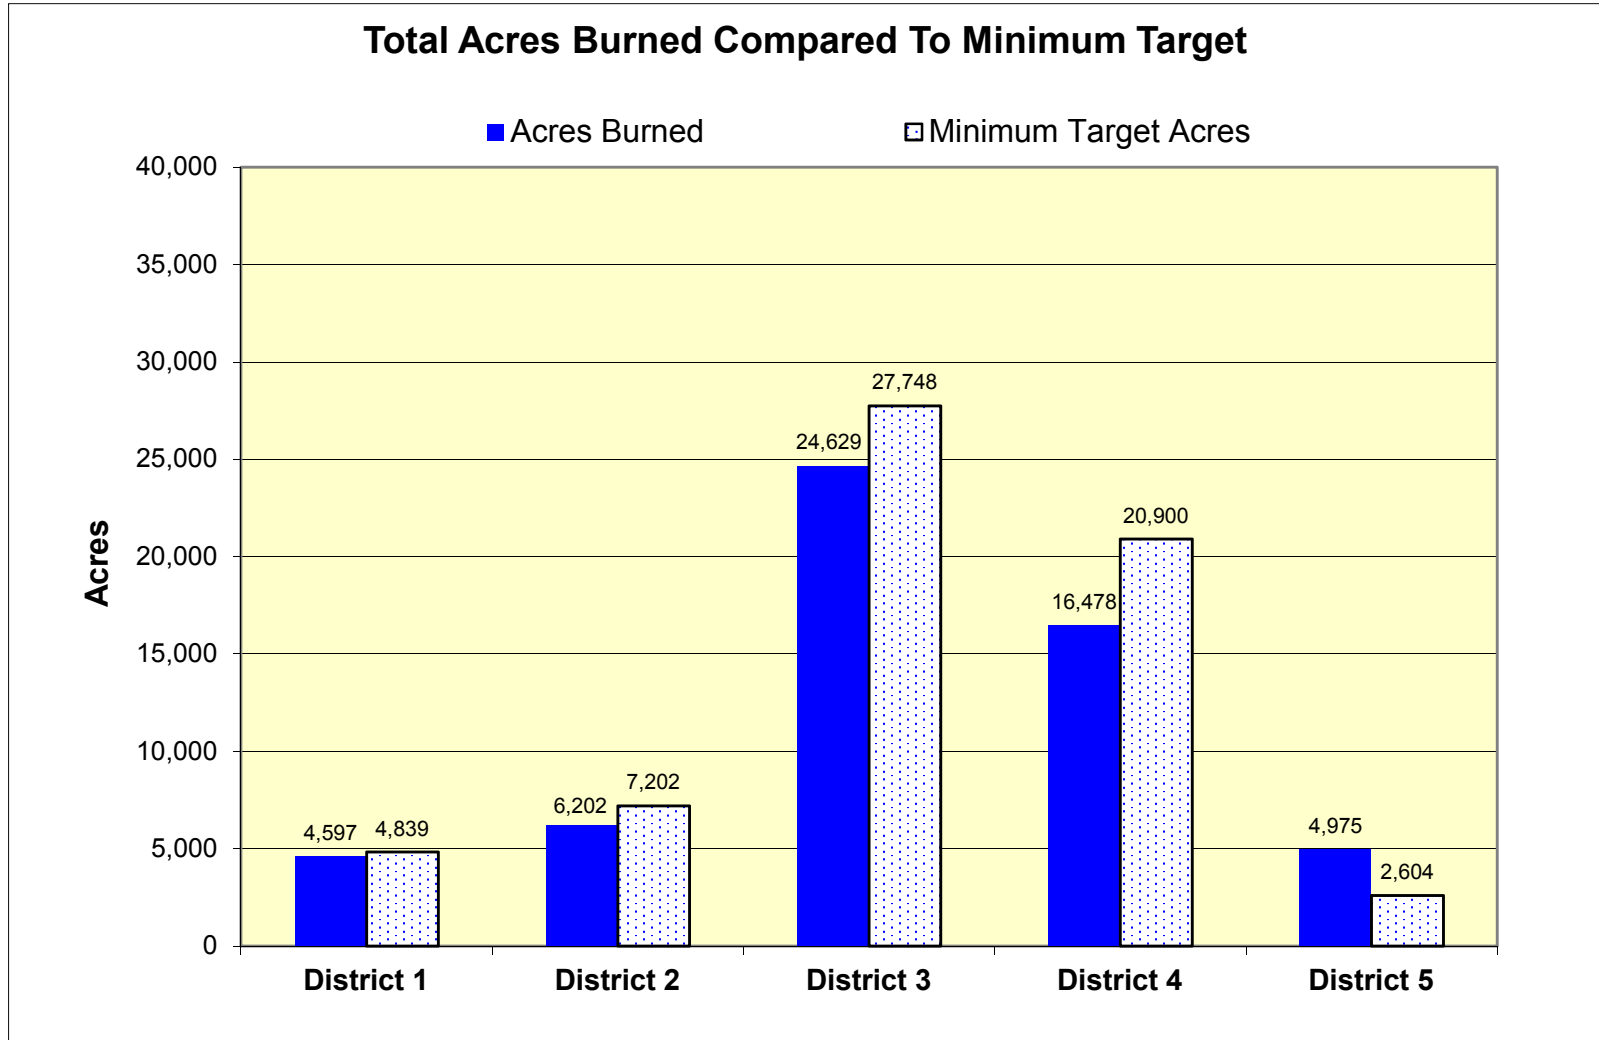

Florida Park Service
Annual Fire Report
Fiscal Year 2012-2013

The graph below shows the number of acres each district planned to burn compared to what was actually accomplished. Acres burned are from both wildfire and prescribed fire.

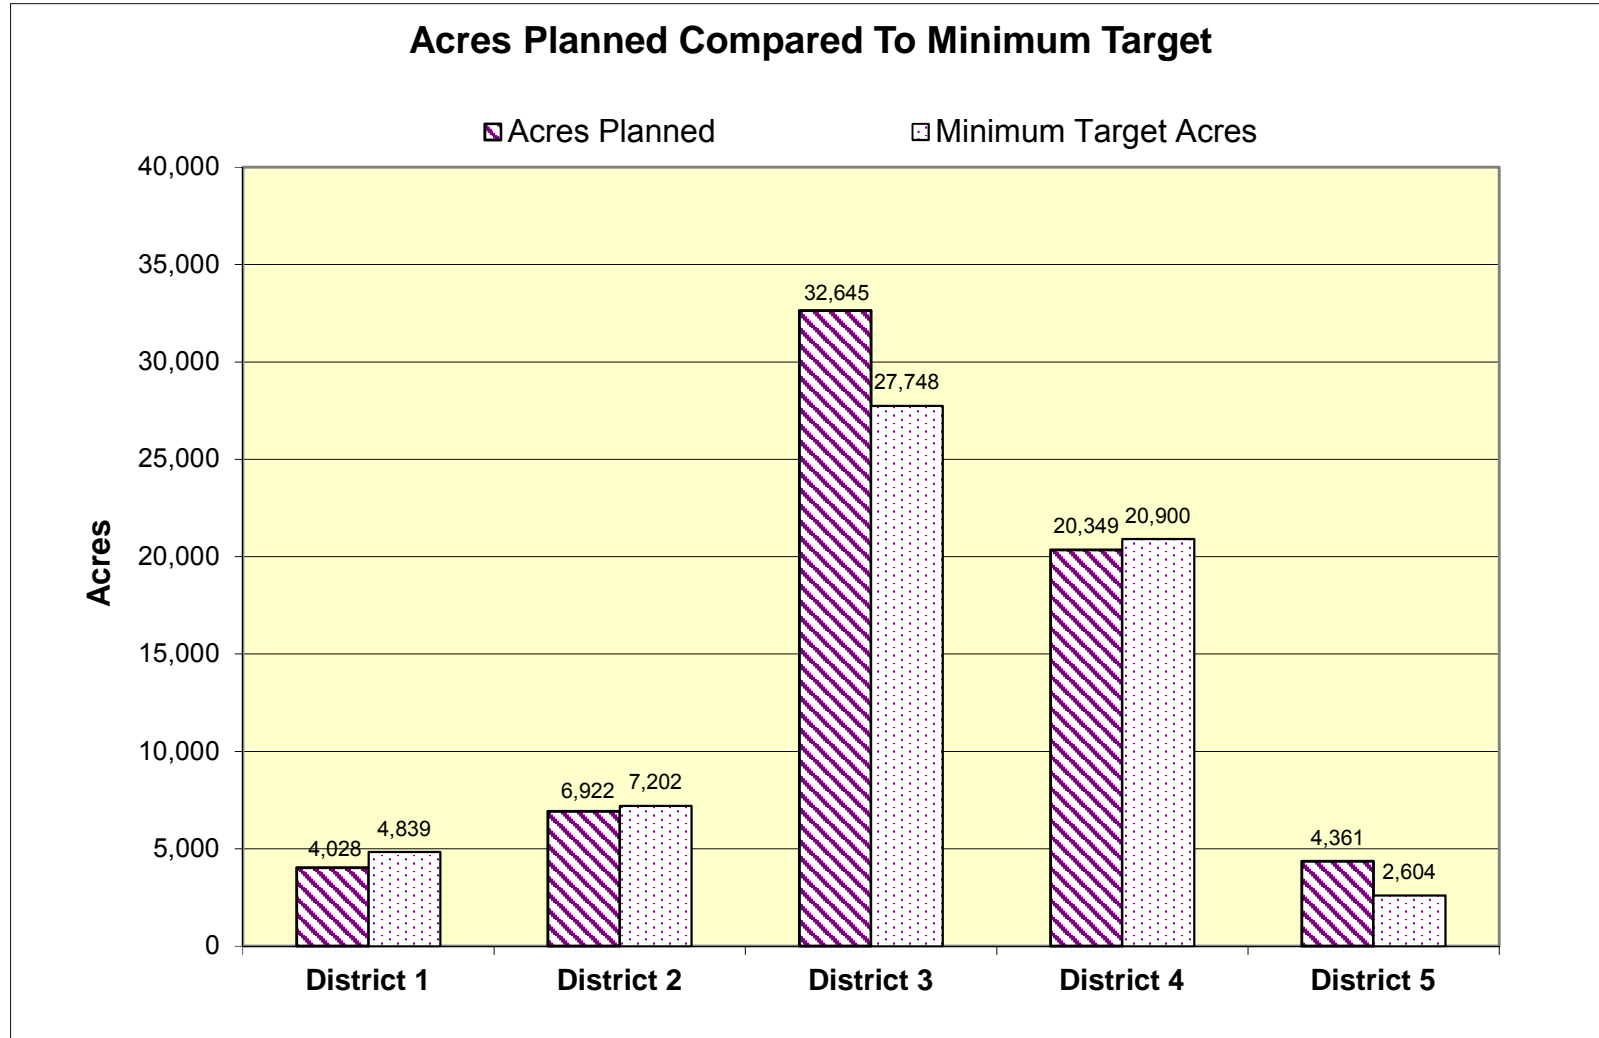

Florida Park Service
Annual Fire Report
Fiscal Year 2012-2013

The graph below shows the minimum target acres for each district and the number of acres burned during the fiscal year, either by prescribed fire or wildfire. The minimum target is the number of acres that must be burned during the fiscal year to remain within the acceptable fire-return interval.

Florida Park Service
Annual Fire Report
Fiscal Year 2012-2013

The graph below shows the minimum target acres for each district compared to the number of acres planned for burning burned during the fiscal year. The minimum target is the number of acres that must be burned during the fiscal year to remain within their acceptable fire-return interval. The number of acres planned is the accomplishment expectation taking into account staff, funding, and other operational factors.

Florida Park Service
Mechanical Treatment
 Fiscal Year 2012-2013

FPS began tracking mechanical treatment acres in fiscal year 2003 to document efforts to improve fire-type habitats. The figures below represent the number of fire-type acres mechanically treated (mowing, roller-chopping, etc.) for fuel hazard reduction prior to conducting prescribed burns. These figures do not include fireline construction or maintenance; mechanical exotic plant removal or timber harvests.

District One	
Deer Lake	18.0
St. George Island	2.0
Eden Gardens	10.0
Rocky Bayou	1.0
St. Joseph Peninsula	0.5
Total	31.5

District Two

Florida Park Service
Mechanical Treatment Report
Fiscal Year 2012-2013

Photos: Pumpkin Hill Creek Preserve State Park

Mechanical treatments such as mulching, roller-chopping, and mowing can be very effective for reducing dense understory prior to reestablishment of natural fire regimes. While recognized as a useful and important tool, this resource management method can also be quite expensive and is therefore highly dependent upon budget allocations each fiscal year.

Invasive Exotic Plant Report Statewide Summary

Fiscal Year 2012-2013

	Total Acres Treated	Acres in Maintenance	# of Parks Treating Exotics
District One	270	51,553	24
District Two	546	100,712	35
District Three	1,345	138,538	27
District Four	2,024	84,879	33
District Five	1,797	79,690	22
Totals	5,982	455,372	141

Cogon grass and Brazilian pepper retained the top two spots as the species most frequently being treated in state parks. Notably absent this year is Australian pine, which dropped off the list due to the appearance of Natal grass and Guinea grass - two species never before ranked in the Top Ten.

Number of Parks Treating Each of the Top 10 Most Commonly Removed Species						
Species	District 1	District 2	District 3	District 4	District 5	Total
cogon grass	14	9	18	22	3	66
Brazilian pepper	0	5	10	27	21	63
air-potato	4	9	14	17	9	53
lantana	9	8	14	10	5	46
Chinese tallow tree	15	12	11	5	2	45
Japanese climbing fern	15	14	7	8	0	44
Caesar's weed	0	2	15	14	4	35
Guinea grass	0	0	11	11	10	32
rosary pea	0	0	6	18	7	31
Natal grass	2	2	14	8	4	30

SUMMARY OF CURRENT CONDITIONS/PLANNING

- Total Park Acres:** The sum of the Management Zone acreages. This acreage may differ from the Division Jurisdiction Report.
- Acres in Maintenance Condition:** A field-based determination which should consider several factors. Generally, infestations in Maintenance Condition should: be manageable with existing staff and resources, not be expanding in size or percent cover, not contain large numbers of mature reproducing individuals, and not pose an imminent threat to imperiled plants, animals or natural communities. Additionally, any infestation that hasn't been surveyed within 24 months will fall out of maintenance condition.
- Gross Area (acres):** The general area occupied by one or more invasive exotic species. The area is estimated by imagining a line around the general perimeter of the infestation. The Gross Area may contain significant parcels of land that are not occupied by invasive exotic plants. Also interpreted as the total area that has to be worked to ensure complete treatment of the infestation.
- Infested Area (acres):** The approximate area of land covered by the invasive plants within a Gross Area if the invasive plants were accumulated into one area. Infested Area = Gross Area X midpoint of the Cover Class.
- Treatment Goals (Inf. Area):** The proposed area to treat (measured as Infested Area) established by the Park Manager as an achievable annual goal with the existing park resources or probable grants for the fiscal year.

ACCOMPLISHMENTS / INFESTED AREA TREATED

- Infested Area Treated:** Infested Area Treated (in acres) within each fiscal quarter (acres are not cumulative).
- Total Treated:** Sums, to date, the individual fiscal quarters for Infested Area Treated (in acres).
- % of Goal Met:** The percentage of the Treatment Goals accomplished at the time the report was generated.
- Gross Area Worked:** A running total of the Gross Area (in acres) that have been worked or traversed to treat the Infested Area.

Florida Park Service
Invasive Exotic Plant Report
 Fiscal Year 2012-2013

The graph below compares the percentage of treatments that occur during each quarter of the fiscal year.

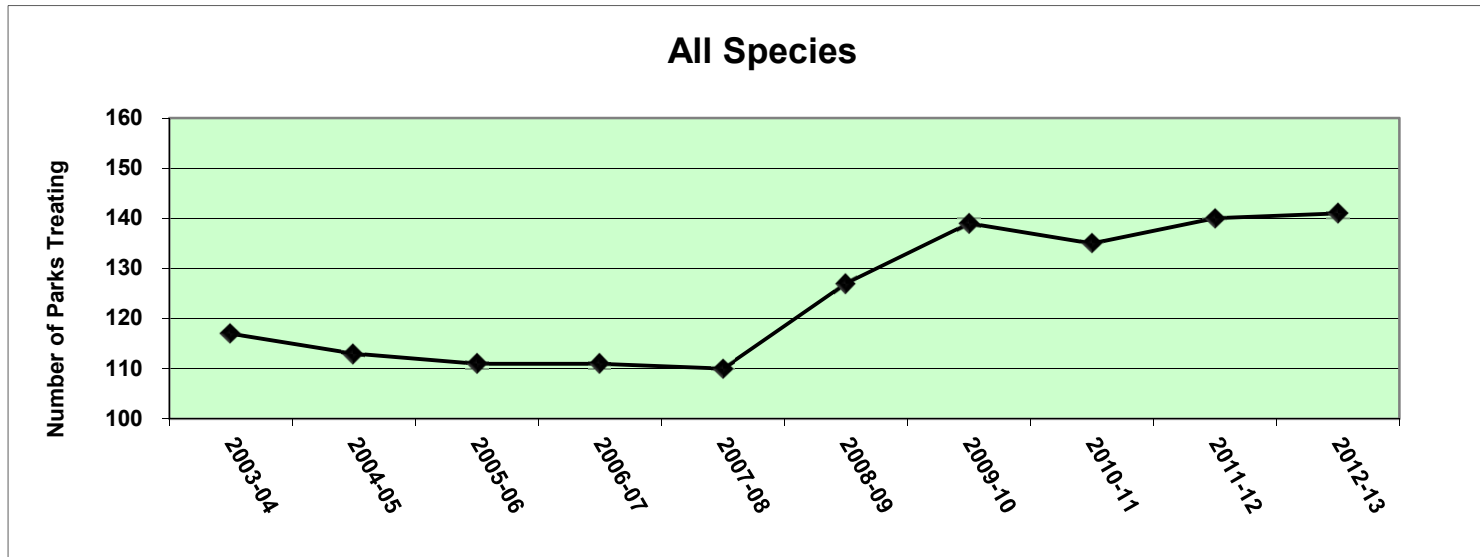

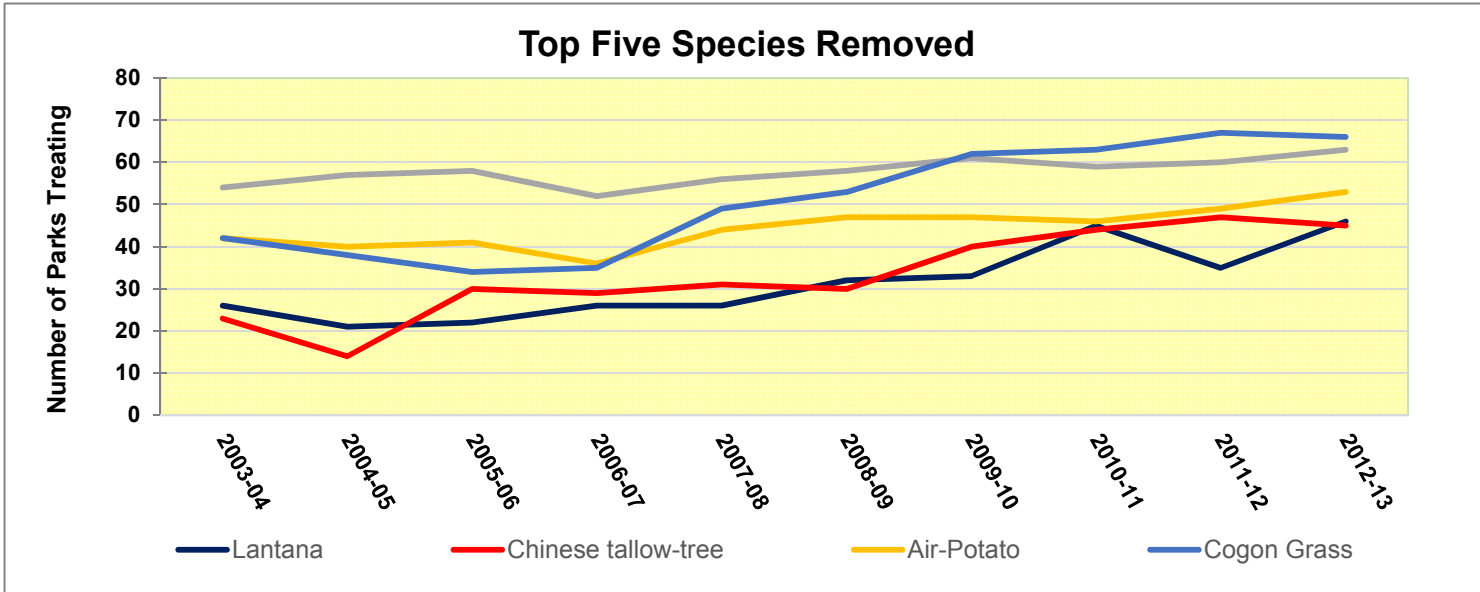

Florida Park Service
Invasive Exotic Plant Report
Fiscal Year 2012-2013

"Gross Area" is the general area occupied by one or more species and may contain significant areas not occupied by invasives. However, in order to treat the invasives, the entire gross area must be traversed. By comparing the two figures, we see a more complete picture of the amount of effort required to treat invasive plants on state park lands.

Exotic and Nuisance Animal Removal Ten-Year Trends

Animals Removed, 2004-2013

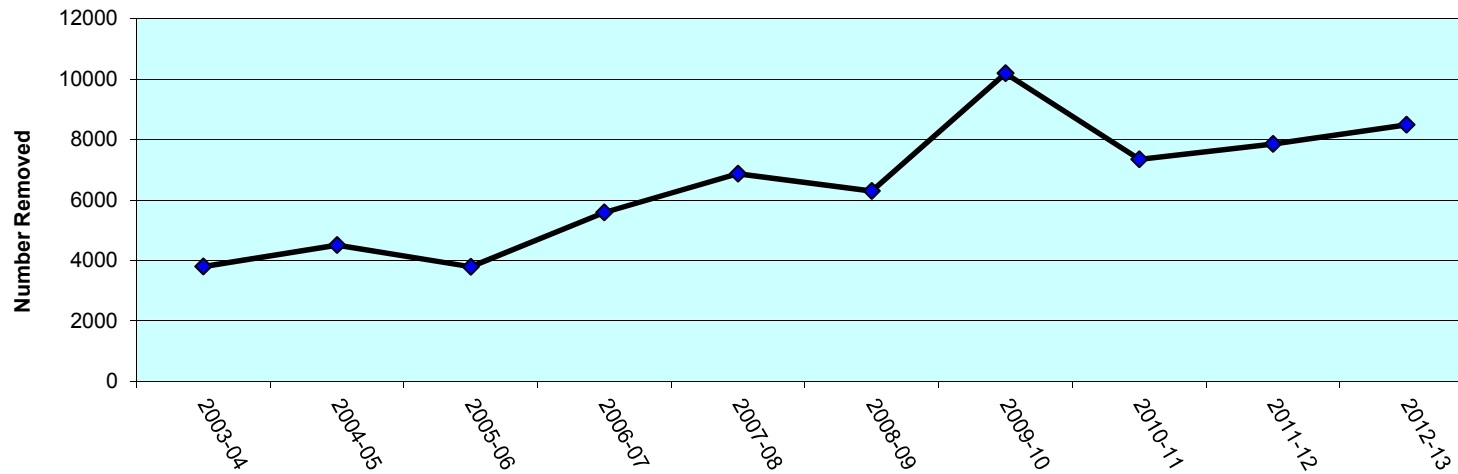

--Feral hogs continue to be the species removed from the most parks and in the largest numbers. The number of hogs removed (5,130) remained roughly equal to last fiscal year's all-time high, but the number of parks removing them increased by nearly 7%.

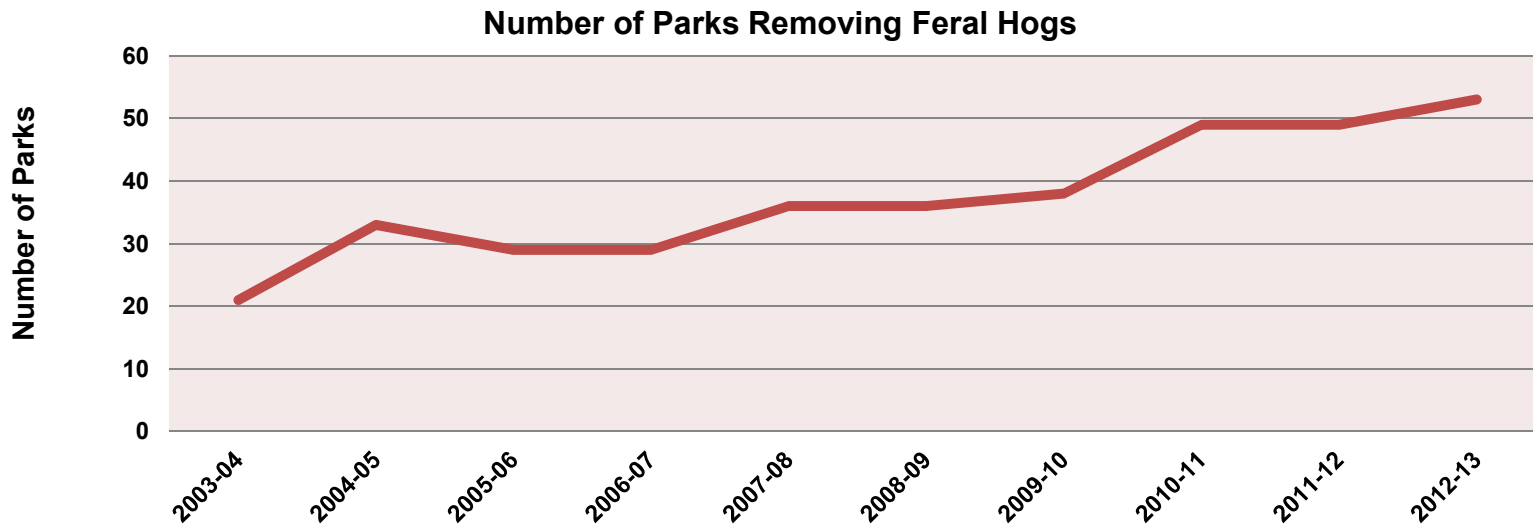

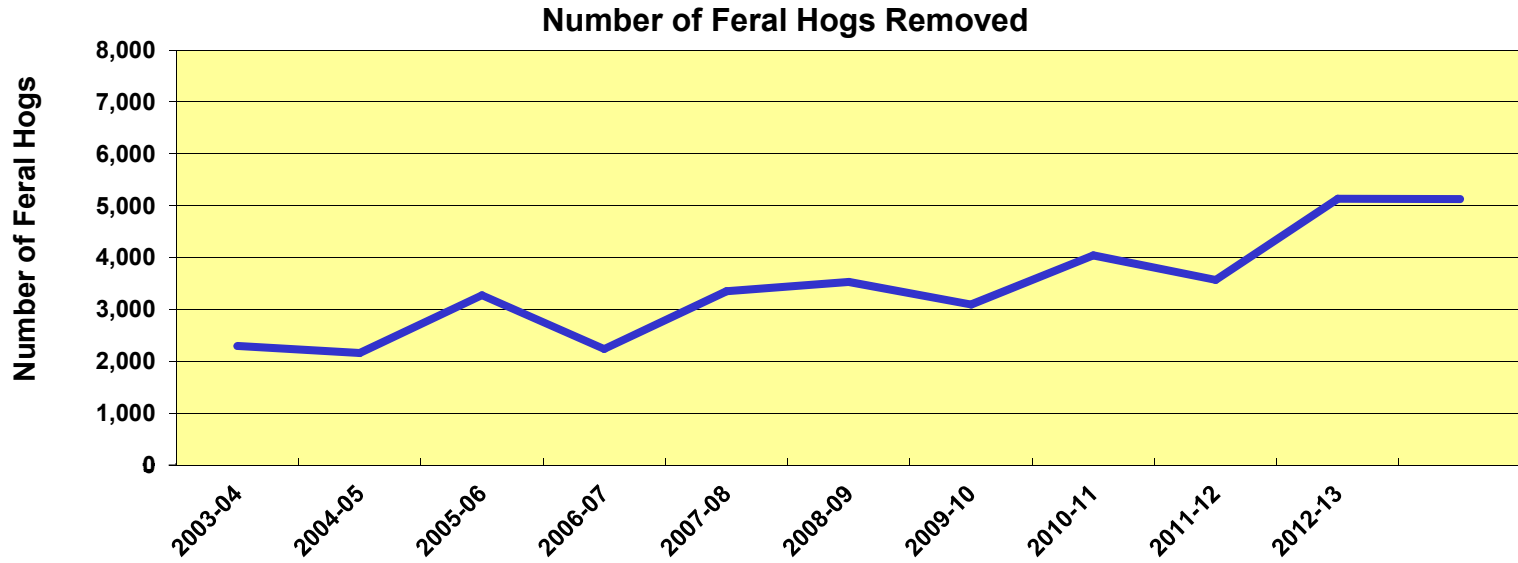

--Exotic fish such as armored catfish, tilapia, and carp are a problem in several springs parks, while the red lionfish has become a troublesome species along the east coast of Florida, particularly in Districts Three and Five.

--Park staff continue to humanely trap and remove feral cats. While they remain a small proportion of animals removed overall, feral cats pose a threat to birds, amphibians, reptiles, and small mammals.
