PLANNING AS OF JULY 1

Fire-Type (FT) Acres:

Includes all natural communities where fire is an ecological process and any other zones being managed with fire.

FT Acres in Rotation:

Fire-type acres that do not exceed maximum Fire Return Interval. That is, acres that are not backlogged. Formula: Fire-Type Acres less Backlog Acres.

FT Target Acres:

Range of fire-type acres that need to be burned to remain in rotation. Formula: Sum of Acres by zone divided by maximum / minimum fire return interval.

FT Acres Planned:

Fire-type acres in the fiscal year plan for burning. Formula: Sum of Annual Planned Acres.

ACCOMPLISHMENTS - ACRES BURNED (RX / WILDFIRE)

Total:

Acres burned during the fiscal year, showing both prescribed and wildfire.

Quarterly:

Acres burned during each fiscal quarter, showing both prescribed and wildfire.

Burn Count:

Number of prescribed fires and wildfires during the fiscal year. Each entry with a FFS Authorization counts as a single prescribed burn. Each entry with 'Day of 1st Report' for wildfire counts as a single wildfire burn.

EVALUATION (Figures are performance indicators during the year and statistically valid on June 30.)

FT Acres in Rotation:

Acres that would be considered in rotation if no further burning for the fiscal year is done. Formula: Acres in Rotation (as of July 1) less acres that would become backlogged on June 30, plus acres burned during the fiscal year.

% of Plan Met:

Percent of planned acres that were treated with fire. Formula: Annual Acres Treated Total divided by Acres Planned with a maximum value of 100%

Florida Park Service Prescribed Burning Report

Florida Park Service Prescribed Burning History 1981 – 2021

Notes About This Graph

1981: FPS began systematically tracking fire program accomplishments

2005: Fire-type acres under management increased with the addition Office of Coastal and Aquatic Managed Areas properties

2005: Apparent increase in "Acres Planned" resulted from re-defining the plan to reflect ecological need rather than the operational plans

2007: Number of fire-type acres dropped significantly with the transfer of Tosohatchee State Reserve to FWC

2009: Began tracking fire management accomplishments with new, more accurate database; resumed tracking operational plans

2014: Greenways and Trails data were incorporated into the fire database adding nearly 30,000 acres of fire-type community

2020: Apparent decrease in "Acres Burned" due to COVID-19 travel restrictions and park closures during the burning season

Florida Park Service Annual Fire Report

Fiscal Year 2020 – 2021

Burned, Planned, Minimum Ecological Target Acres by District

The graph below shows the number of acres each district burned compared to the number planned and the minimum target. Acres burned are from both wildfire and prescribed fire. Minimum target represents the number of acres that must be burned to prevent additional backlog from accumulating and maintain appropriate fire return intervals for each fire-type community.

Florida Park Service Annual Fire Report

Fiscal Years 2016 – 2021

The graph below compares the percentage of acres that were burned (either by prescribed fire or wildfire) during each quarter of the last five fiscal years.

* The Governor of Florida issued a statewide fire ban that lasted 60 days, April 11, 2017 – June 3, 2017.

Florida Park Service Mechanical Treatment Report

Fiscal Year 2020 – 2021

FPS began tracking mechanical treatment acres in fiscal year 2003 to document efforts and to improve fire-type habitats. The figures below represent the number of acres mechanically treated (mowing, roller-chopping, fire line construction/maintenance, or hand clearing) for natural community improvement or maintenance, or for fuel hazard reduction prior to conducting prescribed burns. These figures do not include timber harvests.

SUMMARY OF CURRENT CONDITIONS/PLANNING

Total Park Acres:	The sum of the Management Zone acreages. This acreage may differ from the Division Jurisdiction Report.
Acres in Maintenance Condition:	A field-based determination which should consider several factors. Generally, infestations in Maintenance Condition should: be manageable with existing staff and resources, not be expanding in size or percent cover, not contain large numbers of mature reproducing individuals, and not pose an imminent threat to imperiled plants, animals or natural communities. Additionally, any infestation that hasn't been surveyed within 24 months will fall out of maintenance condition.
Gross Area (acres):	The general area occupied by one or more invasive exotic species. The area is estimated by imagining a line around the general perimeter of the infestation. The Gross Area may contain significant parcels of land that are not occupied by invasive exotic plants. Also interpreted as the total area that has to be worked to ensure complete treatment of the infestation.
Infested Area (acres):	The approximate area of land covered by the invasive plants within a Gross Area if the invasive plants were accumulated into one area. Infested Area = Gross Area X midpoint of the Cover Class.
Treatment Goals (Inf. Area):	The proposed area to treat (measured as Infested Area) established by the Park Manager as an achievable annual goal with the existing park resources or probable grants for the fiscal year.

ACCOMPLISHMENTS / INFESTED AREA TREATED

Infested Area Treated:	Infested Area Treated (in acres) within each fiscal quarter (acres are not cumulative).	Total Treated:	Sums, to date, the individual fiscal quarters for Infested Area Treated (in acres).
% of Goal Met:	The percentage of the Treatment Goals accomplished at the time the report was generated.	Gross Area Worked:	A running total of the Gross Area (in acres) that have been worked or traversed to treat the Infested Area.
