Purpose

In response to the objectives of “encouraging and promoting reuse of reclaimed water” established in sections 373.250 and 403.064, Florida Statutes (F.S.), the Florida Department of Environmental Protection (DEP) has developed a comprehensive water reuse program. Water reuse involves taking domestic wastewater, providing a high degree of treatment, and then using the resulting high-quality reclaimed water for a new beneficial purpose(s). Extensive treatment and disinfection ensure public health and environmental quality are protected. DEP has created extensive rules for water reuse, which are contained in Chapter 62-610, Florida Administrative Code (F.A.C.).

Section 403.0645, F.S., requires all state agencies, state universities and water management districts (WMDs) to use reclaimed water at their facilities to the greatest extent practicable. Furthermore, section 403.0645, F.S., requires all state agencies, state universities and WMDs to submit Annual Agency Reuse Reports to the Secretary of DEP by February 1 each year.

This report was prepared in response to this statutory directive.

Use of Reclaimed Water at DEP Offices and Facilities

It is DEP’s intent to use reclaimed water in its offices and facilities where practicable. DEP works diligently to maximize opportunities using existing sanitary infrastructure provided by local communities to promote reuse objectives. Many facilities were constructed prior to DEP’s occupancy and have limited capital improvements that support water reuse (e.g., landscape irrigation and toilet flushing). Therefore, reuse statistics reported annually do not change significantly from year to year. Regardless, DEP will take advantage of reuse opportunities at its facilities as opportunities become available in communities that engage in water reuse modifications.

In addition to its office space in Tallahassee, DEP operates six regulatory district offices, two branch offices, a lab complex and 11 coastal facilities and aquatic preserves. An inventory of the DEP offices and their potential use of reclaimed water are presented in this report’s Appendix. None of the regulatory district or branch offices currently have reclaimed water available for reuse. DEP’s South District and Central District offices are within the City of Fort Myers’s and the City of Orlando’s general reclaimed water service areas, respectively. These utilities have reclaimed water distribution systems, but reclaimed water service is not currently available at these two district offices. Once reclaimed water is available at these office locations, DEP is committed to working with the property managers to encourage the use of reclaimed water for landscape irrigation, toilet flushing, equipment washing and other allowable uses. None of the DEP regulatory offices have on-site wastewater treatment facilities. Hence, all DEP offices are dependent on other utilities for future reclaimed water service.

DEP's Office of Resilience and Coastal Protection operates 11 facilities across Florida. As shown in the Appendix, two facilities in Franklin County utilize reclaimed water for toilet flushing and hose bibb connections. The remaining nine facilities do not have reclaimed water available, nor do they currently operate domestic wastewater treatment facilities that allow for use of reclaimed water. Potential use of reclaimed water at these sites is limited at this time.

Use of Reclaimed Water at State Parks

The first four-time winner of the gold medal honoring the nation's best state park system¹, DEP's Florida Parks Service is one of the largest in the country with 175 state parks, trails and historical sites. Due primarily to the remote locations of the state parks, reclaimed water service from local utilities is not available in most parks. Reclaimed water is used for maintenance washing of equipment and toilet flushing at the park shop and assistant manager residence of Lignumvitae Key Botanical State Park.

DEP will strive to identify opportunities to use reclaimed water to the extent practicable within the state park system and continue to evaluate the potential for water reuse at other state parks for toilet flushing, fire protection and other activities allowed by Chapter 62-610, F.A.C.

Promoting Water Resue in Florida

Sections 403.064, and 373.250, F.S., encourage and promote water conservation and reuse as state objectives. In response to these reuse objectives, DEP has implemented a comprehensive Water Reuse Program in association with the state's five WMDs and other state agencies. This program includes mandatory considerations for reuse, detailed reuse regulations, public education materials and information and agency coordination.

Before the mid-1980s, Florida had limited reuse activity and very little institutional framework related to reclaimed water. Wastewater management in Florida was dominated by effluent disposal practices – surface water discharges, ocean outfalls and deep well injection disposal. The rules governing reuse were limited to those that dealt primarily with slow-rate land application systems (spray fields) and rapid-rate land application systems (percolation ponds). As water quality constraints began to make it difficult to find suitable locations for new or expanded surface water discharges, some utilities began to look at various land application methods as a means of managing domestic wastewater. Historically, the lack of comprehensive rules governing reuse posed significant hurdles for early reuse projects.

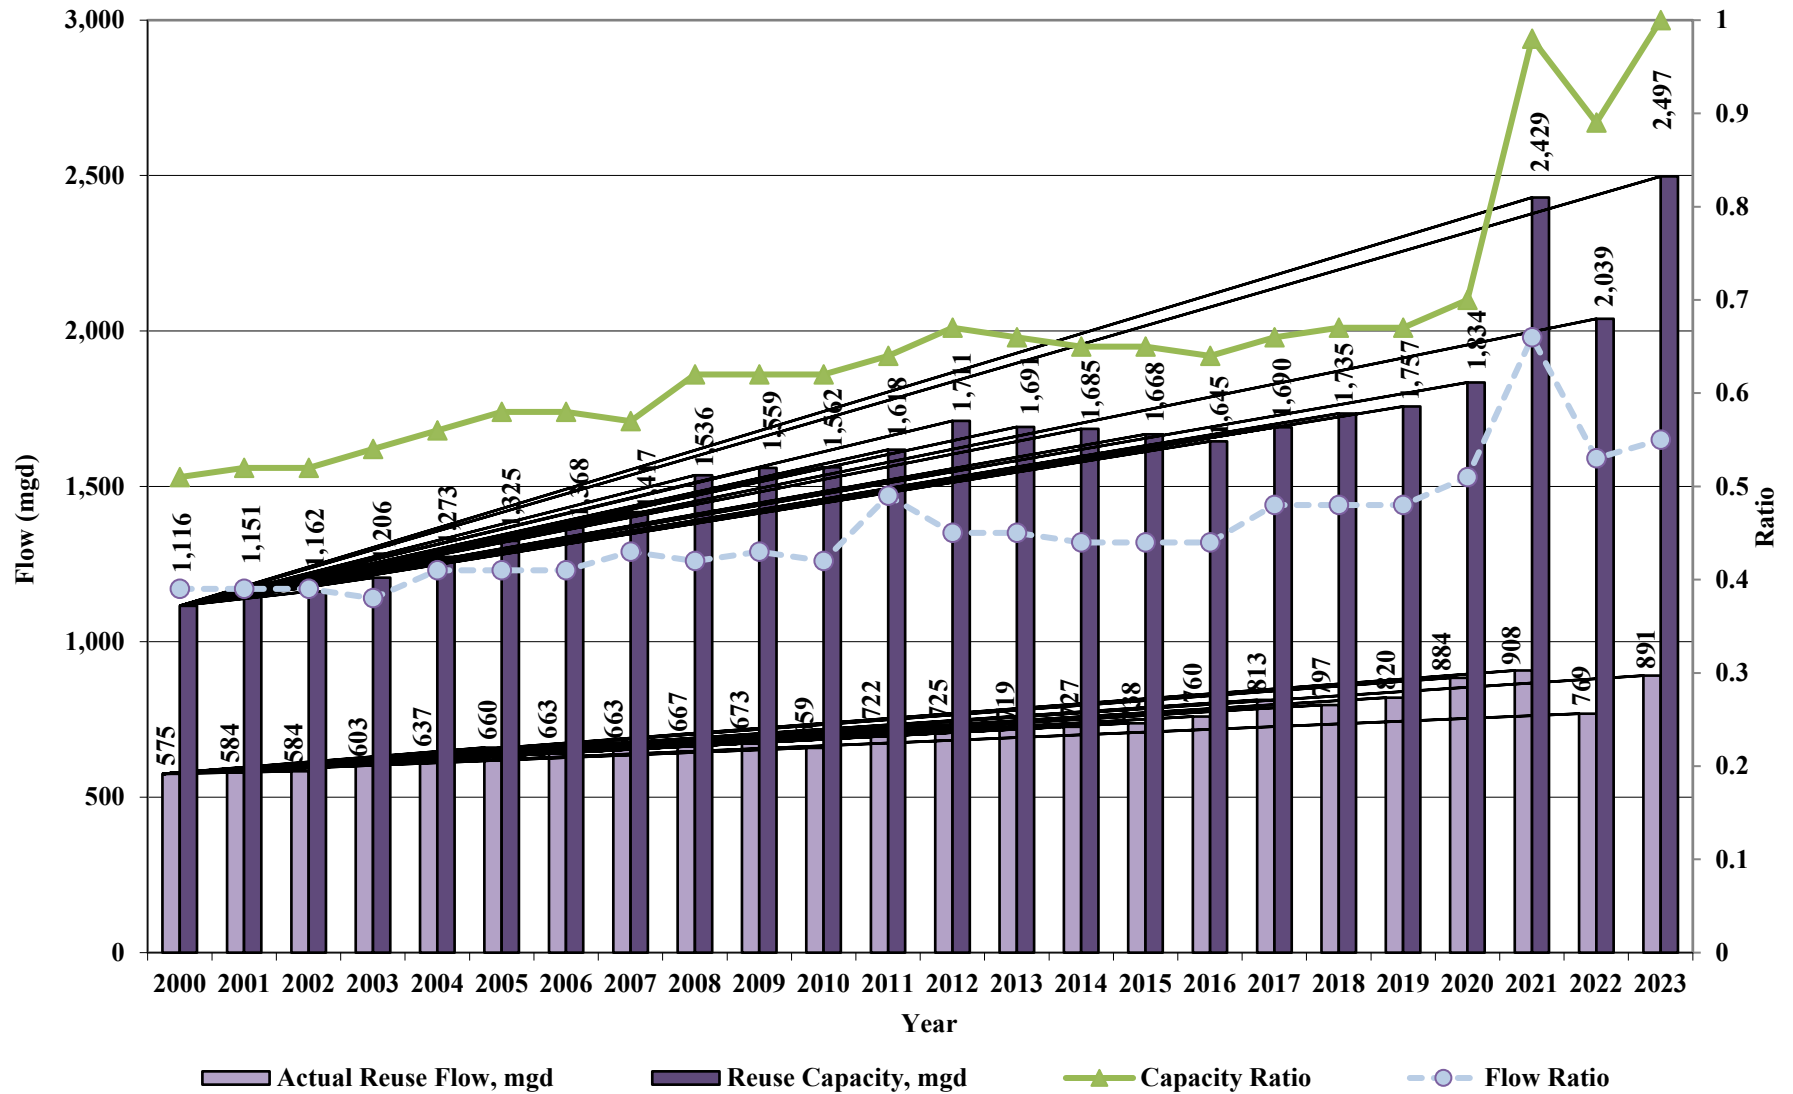

¹ Florida Department of Environmental Protection. 2019 National Gold Medal Winner.
<https://www.floridastateparks.org/learn/2019-national-gold-medal-winner>.

Mandatory consideration of reuse became a part of the wastewater regulatory program in the late 1980s, when Chapter 403, F.S., established the encouragement and promotion of reuse as formal state objectives. Rules were adopted to require the WMDs to designate water resource caution areas (WRCAs), which are areas facing critical water supply problems during the next 20 years, and to establish a mandatory reuse program by directing the WMDs to require a reasonable level of reuse within designated WRCAs through their consumptive use permitting process.

Additionally, comprehensive rules governing reuse were established for beneficial reuse activities, including watering lawns and landscapes; irrigation of golf courses, parks and highway medians; agricultural uses; industrial uses; washing cars; flushing toilets; supplying water to wetlands; recharging groundwater; and augmenting potable water supplies, among other uses. As a result, Florida began to experience rapid growth in use of reclaimed water, and the state is currently a national leader in water reuse. In 2023, reuse capacity in Florida totaled approximately 2,497 million gallons per day (mgd), and approximately 891 mgd of reclaimed water were used for beneficial purposes, which accounted for 55% of the total wastewater flow in Florida.² As seen in Figure 1 below, the 2,497 mgd of reuse capacity represents approximately 100% of the total domestic wastewater treatment capacity.

² Florida Department of Environmental Protection. *2023 Reuse Inventory*. Tallahassee: Florida Department of Environmental Protection.

Figure 1. Florida's Reuse Growth.

In 2020, the Florida Legislature passed Senate Bill 712, also known as the Clean Waterways Act, now Chapter 2020-150, Laws of Florida. As part of this act, the legislature has established reclaimed water as a source of drinking water for public water supply systems. Furthermore, the act directs DEP to use the Potable Reuse Commission's January 2020 report, *Advancing Potable Reuse in Florida: Framework for the Implementation of Potable Reuse in Florida*, as a basis for developing rules that encourage and advance potable reuse as an alternative water supply option. With the passing of the Clean Waterways Act, and based on the recommendations of the Potable Reuse Commission's report, DEP held multiple public workshops and subsequently proposed a framework that will continue to propel beneficial reuse in Florida by expanding the ability for utilities to develop potable reuse systems in the state. Where a utility chooses to implement a potable reuse system, the proposed framework will continue to protect Floridians by ensuring that the resulting drinking water produced from reclaimed water will be safe for consumption and use. DEP has been actively engaged with drinking water utilities and stakeholders to complete this rule development effort. A revised draft of the framework based on this collaboration was presented at a rule development workshop held on July 15, 2024, and was published on Nov. 8, 2024. The proposed framework includes a new comprehensive rule chapter specifically for potable reuse (Chapter 62-565, F.A.C.), and corresponding changes to related drinking water regulations (Chapters 62-550 and 62-555, F.A.C.), and the state's existing wastewater reuse rule provisions (Chapter 62-610, F.A.C.). The framework was presented to the Environmental Regulation Commission on Dec. 13, 2024, and was approved for adoption. The new potable reuse rules are expected to be effective during the first quarter of 2025.

DEP's Water Reuse Program will continue to encourage and promote water reuse in Florida and pursue strategies outlined in the *2003 Reuse Strategies Report* in an effort to increase the efficiency and effectiveness of water reuse to maximize the resulting water conservation and management benefits.³ This report contains a summary of the Water Reuse Program and can be found on DEP's website at https://floridadep.gov/sites/default/files/valued_resource_FinalReport_508C.pdf.

Public Education Activities

DEP recognizes the educational benefits for the public associated with the use of reclaimed water at state facilities. As other state agencies, state universities and WMDs move to use reclaimed water, DEP provides assistance related to the content of educational materials and displays.

DEP maintains a comprehensive water reuse webpage (<https://floridadep.gov/water/domestic-wastewater/content/water-reuse-program>) that provides facts and statistics related to the use of reclaimed water in Florida; technical documents, including documents on feasibility studies, pathogen monitoring and ultraviolet (UV) disinfection; and resources for owners, operators and managers of reuse systems, such as information on cross connection controls, public notification requirements and

³ Reuse Coordinating Committee and the Water Conservation Initiative Water Reuse Workgroup. (2003). *Water Reuse for Florida: Strategies for Effective Use of Reclaimed Water*. Tallahassee: Florida Department of Environmental Protection.

monitoring requirements. This webpage will continue to be maintained and used as a means of disseminating information on water reuse to promote and encourage reuse throughout Florida.

Coordination with Other Agencies

Several state agencies are involved in reuse initiatives. To effectively coordinate the state's reuse program and promote communication between agencies, DEP holds and participates in various stakeholder meetings focused on reuse activities throughout the year.

DEP coordinates the water reuse program, administers the domestic wastewater permitting program and has the primary responsibility for administering water quality programs. WMDs are responsible for designating WRCAs, issuing consumptive use permits and other water quantity issues. WMDs may impose reuse requirements in consumptive use permits for facilities in WRCAs. The Florida Public Service Commission (PSC) regulates rates for investor-owned utilities located in 40 Florida counties⁴. These utilities are able to distribute the costs of reuse facilities among water, wastewater and reclaimed water customers. The Florida Department of Health (DOH) serves as a technical adviser for public health issues. The Florida Department of Agriculture and Consumer Services (DACS) is involved in agricultural reuse projects.

DEP maintains a webpage (<https://floridadep.gov/water/domestic-wastewater/content/annual-agency-reuse-reports-water-reuse-state-agencies-state>) to provide information about water reuse and the annual reporting requirements to state agencies, state universities and WMDs. The current *DEP Annual Agency Reuse Report* is presented on this webpage.

Appendix: DEP Offices and Facilities

DEP occupies a number of offices and facilities throughout the state. The tables below list each of the DEP occupied offices and facilities and summarize the reuse activities at each of these locations.

Column Descriptions

1. County: County in which the facility or building is located.
2. Name of Facility: Name of the facility or building.
3. Type of Facility: “Office,” “Park” or other short descriptor for the type of facility or building.
4. Location (City): City in which the facility or building is located.
5. Reclaimed Water Available: Whether the utility provides reclaimed water service in the vicinity of the facility or building.
6. WWTP on Site: Whether a domestic wastewater treatment facility is located at the facility or building.
7. Reclaimed Water Used: Whether reclaimed water is used at the facility or building.
8. Uses of Reclaimed Water: If reclaimed water is used, the type of use (landscape irrigation, toilet flushing, ground water recharge, laundries, etc.).
9. Future Plans: Whether there are future plans for the use of reclaimed water at the facility or building.
10. Owner: The owner of the facility or building (Florida Department of Management Services [DMS], DEP, etc.). “Leased” indicates that the facility or building is leased from a private entity.
