Executive Summary

Chapter 62-610, Florida Administrative Code (F.A.C.), requires owners/permittees of domestic wastewater facilities having permitted capacities of ≥ 0.1 million gallons per day (mgd) that provide reclaimed water for reuse to electronically submit annual reuse reports to the Florida Department of Environmental Protection (DEP). These annual reports are the basis for the “2025 Reuse Inventory.”

Submittals of these completed forms were due on Jan. 1, 2026, and covered a reporting period of Oct. 1, 2024, through Sept. 30, 2025. Information submitted by facilities was entered into DEP’s wastewater facility regulation (WAFR) database. A total of 492 facilities were required to submit a 2025 annual reuse report. Of these, 421 submitted timely reports, representing 86% of all facilities with a reporting obligation. An additional eight facilities with permitted capacities < 0.1 mgd voluntarily submitted 2025 reports, bringing the total number of reports received by DEP to 429.

The “2025 Reuse Inventory” was compiled using the information provided by all active domestic wastewater treatment facilities that submitted timely reports to DEP, information from the voluntary submissions received and additional information from WAFR.

Definitions of Terms in the 2025 Reuse Inventory Report and Appendices

Disposal Types and Sub-types

- **Coastal or estuarine waters** – National Pollutant Discharge Elimination System (NPDES) permitted discharge to Class II or Class III predominately marine surface waters.
- **Deep well injection** – Deep subsurface emplacement of effluent through a well typically permitted by DEP’s Underground Injection Control (UIC) Program under Chapter 62-528, F.A.C.
- **Ocean outfall** – NPDES permitted discharge to open ocean waters, per Rule 62-600.520, F.A.C.
- **Other surface waters** – NPDES permitted discharge to surface waters not otherwise specified, most typically Class III predominately fresh water such as rivers, lakes and streams/canals, when not considered reuse pursuant to Rule 62-610.810, F.A.C.
- **Other** – Methods of effluent disposal not otherwise specified that do not qualify as reuse pursuant to Rule 62-610.810, F.A.C., including continuously loaded percolation ponds and overland flow systems.
- **Surface water discharge** – NPDES permitted discharge.
- **Wetlands** – NPDES permitted discharge to wetlands, typically permitted under Chapter 62-611, F.A.C., when not considered reuse per paragraph 62-610.810(2)(g), F.A.C.

Other Definitions

The following terms are defined solely for the purposes of this document.

- **Absorption field** – A restricted access, slow-rate land application system using subsurface application for recharge to the surficial groundwater.
- **Aquifer storage and recovery (ASR)** – The injection of reclaimed water into a subsurface formation for storage and recovery of the stored reclaimed water for beneficial purposes at a later date.
- **Cross-connection** – Any temporary or permanent physical arrangement where a public water supply is connected, either directly or indirectly, with any other water supply system, such as a reclaimed water system.
- **Domestic wastewater** – Wastewater derived principally from dwellings, business buildings, institutions and the like. Domestic wastewater is also known as sanitary wastewater, sewage, and in some cases, municipal wastewater.

- **Feed and fodder crops** – Crops such as grass, hay and rye that are cut and carried to domesticated livestock as food.
- **Potable quality water offset** – The amount of potable quality water (Class F-I, G-I or G-II groundwater or water meeting drinking water standards) saved through the use of reclaimed water expressed as a percentage of the total reclaimed water used. The percentages for each reuse activity are taken from Table 5, Relative Desirability of Reuse Activities, in the “2003 Water Reuse for Florida: Strategies for Effective Use of Reclaimed Water.”
- **Public access area** – An area intended to be accessible to the general public, such as a golf course, cemetery, park, landscape area, hotel, motel or highway median. Public access areas include private property and residential dwellings that are not open to the public at-large. For purposes of this report, “general public” does not include personnel of an authorized treatment plant, utility system or reuse system (e.g., sprayfield site, industrial facility, farm, etc.).
- **Recharge fraction** – The portion of reclaimed water used in a reuse system that recharges an underlying potable quality groundwater (Class F-I, G-I or G-II groundwater) that is used for potable supply or augments a Class I surface water, expressed as a percentage of the total reclaimed water used.
- **Reclaimed water** – Water that has received at least secondary treatment and basic disinfection and is reused after flowing out of a domestic wastewater treatment facility.
- **Reuse** – The deliberate application of reclaimed water in compliance with DEP rules for a beneficial purpose. Criteria used to classify projects as "reuse" are located in Rule 62-610.810, F.A.C.
- **Reuse capacity** – The permitted capacity or maximum amount of reclaimed water that a reuse system can accommodate or distribute; capacities are reported in terms of mgd, unless otherwise noted.
- **Reuse facility** – A domestic wastewater treatment facility utilized for the purpose of treating, stabilizing or holding wastes that provides reclaimed water to one or more reuse systems.
- **Reuse flow** – The actual flow or amount of reclaimed water being distributed to a reuse system or utilized for a reuse activity on an average annual basis; flows are reported in terms of mgd unless otherwise noted.
- **Reuse system** – A domestic wastewater facility or multiple facilities utilized for the release of reclaimed water into the environment. Criteria used to classify activities as “reuse” or “effluent disposal” are located in Rule 62-610.810, F.A.C. Reuse systems may also, by special contract, send and receive reclaimed water to and from other separately owned, operated and permitted reuse systems.

- **Utility** – An owner/operator of a domestic wastewater treatment facility and/or reuse system. A utility can be a public (e.g., JEA, Lee County, City of Sanibel, etc.) or private (e.g., Toho Water Authority) entity operating one or more reuse facilities/systems within the entity’s jurisdiction or area.
- **WAFR ID** – An acronym for wastewater facilities regulation identification, a unique number assigned by DEP to each domestic wastewater treatment facility or master reuse system; it is also the first part of each facility’s permit number. A WAFR ID beginning with “FL0” indicates a facility with NPDES-permitted surface water discharge, while “FLA” indicates a facility without.
- **Wastewater treatment facility (WWTF) capacity** – The permitted capacity or maximum amount of wastewater that a wastewater treatment facility can treat; capacities are reported in terms of mgd unless otherwise noted.
- **WWTF flow** – The actual flow or amount of wastewater that flows through a wastewater treatment facility on an average annual basis; flows are reported in terms of mgd unless otherwise noted.

Purpose

Florida maintains the largest and most comprehensive inventory of permitted reuse systems in the country. Sections 403.064 and 373.250, Florida Statutes (F.S.), establish water conservation and the promotion of reuse of reclaimed water as formal state objectives. DEP updates and publishes this annual inventory to document the state's efforts to encourage and promote reuse of reclaimed water in Florida. The inventory also gives municipalities and utilities interested in developing reuse programs access to other communities and utilities that have already implemented such programs.

Inventory Design

Chapter 62-610, F.A.C., requires domestic wastewater facilities with permitted capacities of ≥ 0.1 mgd that have the ability to provide reclaimed water for reuse to submit annual reuse reports on DEP Form 62-610.300(3)(a)2. Submittals of these completed forms were due on Jan. 1, 2026, and covered a reporting period of Oct. 1, 2024, through Sept. 30, 2025.

A total of 492 facilities were required to submit a 2025 annual reuse report. Of these 492 facilities, 421 submitted timely reports, representing 86% of all facilities with a reporting obligation. An additional eight facilities with permitted capacities < 0.1 mgd voluntarily submitted 2025 reports, bringing the total number of reports received by DEP to 429.

The “2025 Reuse Inventory” was compiled using the information provided by all active domestic wastewater treatment facilities that submitted timely reports to DEP, information from the voluntary submissions received and additional information from DEP's WAFR database.

Results

Reuse Facilities

Reporting facilities had a total permitted WWTF capacity of 2,815 mgd and treated 1,777 mgd of domestic wastewater. Approximately 1,029 mgd of reclaimed water from the facilities was reused for beneficial purposes, representing approximately 58% of the facilities' flow. The facilities served 382 reuse systems (listed in Appendix A). The total reuse capacity associated with the reuse systems was 2,596 mgd. Appendices B¹ and D provide information on these reuse facilities and reuse systems², as well as their reuse and disposal activities.

Reclaimed water from the systems was used to irrigate 631,795 residences, 547 golf courses, 1,110 parks and 429 schools. Appendix E provides details on the numbers and types of public access reuse customers, including cooling towers and unique uses for reclaimed water. Tables 1a. and 1b. summarize

¹ Some facilities listed in Appendix B are assigned to the county in which the reuse system is located.

² See “Other Definitions” on pages 5-7 for an explanation of the terms “reuse facility” and “reuse system” as defined in this report.

the data in terms of the number of reuse facilities and reuse systems in each DEP district and water management district, as well as the breakdown of certain public access reuse activities, such as number of residences, golf courses, parks and schools irrigated by reclaimed water.

Table 2 provides a summary of reuse activities by reuse type, including the number of reuse systems, capacity, flow and area for each reuse subtype. Irrigation of areas accessible to the public represented approximately 58% of the 1,029 mgd of reclaimed water reused. Figure 1 shows the percentage of reclaimed water utilization by flow for each reuse type. Tables 3a. and 3b. compare the types of reclaimed water utilization in each DEP district and water management district.

Approximately 2,927 acres of edible crops from 156 reuse systems were reported as being irrigated with reclaimed water. Edible crop farmland has historically been dedicated to the production of citrus (e.g., oranges, tangerines, grapefruit, etc.).

Tables 4a. and 4b. provide the reuse capacity and flow ratios for each DEP district and water management district. Table 5 provides a summary, by county, of the total domestic wastewater treatment plant and reuse capacities and flows for all facilities included in this report, the ratio of the reuse capacity to wastewater treatment plant capacity, and the ratio of the reuse flow to total WWTF flow.

The statewide average reuse flow per capita, including population served by onsite sewage treatment and disposal systems (i.e., septic tanks), was 44.01 gallons per day of reuse per person. Table 6 shows the per capita reuse capacities and reuse flows for each county in Florida. The per capita usage is based on 2025 population estimates from the Bureau of Economic and Business Research, University of Florida, “Florida Estimates of Population 2025.” Figure 2 shows the map of Florida’s counties color-coded by range of reuse flow per capita.

Notes:

- (a) See “Other Definitions” on pages 5-7 for an explanation of the terms “reuse facility” and “reuse system” as used in this report.
- (b) A few reuse systems are physically located across jurisdictional boundaries (i.e., across more than one water management district, DEP district or county). Due to the design of the database, all the reuse systems’ reuse flows are attributed to the jurisdiction in which the majority of the reuse system is located.
- (c) The number of treatment facilities providing reuse (Appendix B) is greater than the number of reuse systems (Appendix A) because in several cases, multiple treatment facilities serve one reuse system. Furthermore, a treatment facility may send reclaimed water to more than one reuse system; while these facilities will be listed more than once in Appendix B, they are only counted once in the total number of facilities providing reuse.
- (d) The number of cooling towers includes once-through cooling towers at power plants and other commercial use cooling towers.

Notes:

- (a) The numbers of systems are not additive since a single system may engage in one or more reuse activities.
- (b) Discrepancies in column totals are due to internal rounding associated with the development of this summary table; totals presented in table are calculated without rounding individual values.
- (c) The totals were based on self-reported data provided in the annual report submissions.

Notes:

- (a) Discrepancies in totaling the columns are due to internal rounding associated with the development of this table; totals presented in table are calculated without rounding individual values.
- (b) These totals were extracted from data available in the state-maintained database and included only facilities that submitted a timely report and are permitted for reuse.
- (c) Capacity ratio is calculated as reuse capacity/total WWTF capacity. Capacity ratios greater than 1.0 (i.e., greater than 100%) indicate the utility(ies) may employ several reuse options, making the reuse capacity greater than the WWTF capacity.
- (d) Flow ratio is calculated as reuse flow/total WWTF flow.
- (e) Reuse flow that replaces potable-quality water includes flows for public access irrigation, irrigation of edible crops, toilet flushing, fire protection and industrial uses. Not included in this flow calculation are agriculture irrigation of other crops, absorption fields, rapid infiltration basins, wetlands and industrial reuse at the WWTF.

Notes:

- (a) Totals include the WWTF capacity and flow of facilities that submitted a timely report.
- (b) Capacity ratio is calculated as reuse capacity/total WWTF capacity. Capacity ratios greater than 1.0 (i.e., greater than 100%) indicate the utility(ies) may employ several reuse options, making the reuse capacity greater than the WWTF capacity.
- (c) Flow ratio is calculated as reuse flow/total WWTF flow. Flow ratios greater than 1.0 (i.e., greater than 100%) indicate that reuse may include supplemental water supplies, reclaimed water recovered from aquifer storage recover wells, or reclaimed water that is reused at the treatment plant and then reused again off-site.
- (d) Discrepancies in totaling the columns are due to internal rounding associated with the development of this table; totals presented in table are calculated without rounding individual values.
- (e) State average.

- (a) Bureau of Economic and Business Research, University of Florida, “2024 Florida Estimates of Population”, April 1, 2025.
- (b) Reuse capacity is calculated as reuse capacity (gpd)/population. Gallons per day (gpd) are equivalent to mgd divided by one million.
- (c) Reuse flow is calculated as reuse flow (gpd)/population.
- (d) Counties ranked from highest rate of reuse flow per capita to lowest rate of reuse flow per capita (e.g., county with highest rate of reuse flow per capita is ranked No. 1; counties with no reuse flow per capita are tied for last place).
- (e) Counties ranked according to population capita (e.g., county with highest population is ranked No. 1).

Facilities Engaging in Disposal

Of the 429 domestic wastewater treatment facilities that submitted timely reports, 133 facilities disposed a portion of their wastewater. The total disposal flow of these facilities was 841 mgd. Appendix F provides information on facilities that engaged in disposal activities, the type and subtype of disposal in which each facility engaged, and the corresponding permitted capacity and flow for each disposal subtype.

Supplemental Water Supplies

Some reuse systems use other sources of water to augment the reclaimed water supply. In 2025, a total of 382 reuse systems in Florida used 35.52 mgd of surface water, 25.81 mgd of groundwater, 2.13 mgd of stormwater, 1.77 mgd of drinking water and 5.58 mgd from other sources to supplement reclaimed water supplies, for a total of 70.80 mgd of supplemental water used. Appendix C details the reuse

systems in the state that use supplemental water supplies and summarizes the flows by county, including reclaimed water available for reuse.

Efficient and Effective Water Reuse

“Water Reuse for Florida: Strategies for Effective Use of Reclaimed Water,” also known as “the strategies report,” was published in 2003. This report identified strategies for increasing the efficient and effective use of reclaimed water. Two concepts introduced in the report, potable quality water offset and recharge fraction, play increasingly important roles in shaping efficient and effective water reuse in Florida.

Potable quality water offset is the amount of potable quality water (Class F-I, G-I or G-II groundwater or water meeting drinking water standards) saved through the use of reclaimed water, expressed as a percentage of the total reclaimed water used. Recharge fraction is the portion of reclaimed water used in a reuse system that recharges underlying potable quality groundwater (Class F-I, G-I or G-II groundwater) that is used for potable supply, or which augments a Class I surface water, expressed as a percentage of the total reclaimed water used.

Some reuse options are more efficient at offsetting the use of potable water or recharging/augmenting a potential potable surface or groundwater supply. Specific potable quality water offsets and recharge fractions have been developed for various reuse activities to estimate actual offsets and recharge for a given reuse flow as used in Table 7c.

The 906 mgd of reclaimed water used in 2025 is estimated to have offset (i.e., avoided) the use of 481 mgd (approximately 175.5 billion gallons per year) of potable quality water while adding 327 mgd (approximately 119 billion gallons per year) back to available water supplies.

Tables 7a. and 7b. summarize the amount of potable quality water offset and recharge flow achieved within each DEP district and water management district. Table 7c. details the amount of reclaimed water used to offset and recharge potable quality water by county.

Notes:

- (a) These totals do not include flows to reuse activities that do not represent an offset to potable quality water or aquifer recharge, such as wetlands, decorative fountains and storage purposes.
- (b) RF = recharge flow, the portion of reuse flow that is recharged to water supplies.
- (c) The offset and recharge flows were calculated by multiplying the total flow for a reuse activity by the percentages of potable quality offset and recharge fraction for that reuse activity as prescribed in “Table 5. Relative Desirability of Reuse Activities” in the strategies report as seen below.

Table 7d. Summary of county offset and recharge flows due to water reuse.

Reuse Activity	Potable Quality Water Offset (%)	Recharge Fraction (%)	Justification Using Table 5 of Strategies Report
Golf course irrigation (GCI)	75	10	Efficient landscape irrigation
Residential irrigation (RI)	40	45	Rounded averages of efficient and inefficient residential irrigation
Other public access areas (OPAA)	60	30	Rounded averages of efficient and inefficient landscape irrigation
Groundwater recharge and indirect potable reuse (GWR&IPR)	0	90	High desirability – rapid infiltration basins
Agricultural irrigation (AI)	60	35	Rounded averages of efficient and inefficient agricultural irrigation
Industrial uses (IND), toilet flushing (TF) and fire protection (FP)	100	0	High desirability – cooling towers, toilet flushing and fire protection

Water Resource Caution Areas

Water resource caution areas (WRCAs) are areas that have critical water supply problems or are projected to have critical water supply problems within the next 20 years. Water reuse was originally required only within these WRCAs unless such reuse was not economically, environmentally or technically feasible as determined by a reuse feasibility study. Chapter 62-40, F.A.C., required use of reclaimed water statewide in 2005. Table 8 summarizes information about reuse systems located within WRCAs and those located outside of WRCAs.

Table 8. Reuse activity in WRCAs.

Reuse Activity	Inside WRCA	Outside WRCA	Total
Number of reuse systems	304	78	382
Number of WWTFs providing reuse	351	78	429
Number of WWTFs engaging in disposal	124	9	133
Total wastewater capacity (mgd)	2,607	208	2,815
Total wastewater flow (mgd)	1,666	112	1,777
Reuse capacity (mgd)	2,350	246	2,596
Reuse flow (mgd)	931	98	1,029
Public access reuse flow (mgd)*	578	19	597
Edible crops reuse flow (mgd)	12.6	0.00	12.6

*This includes irrigation of residential landscapes, golf courses, schools, parks and other public access reuse such as toilet flushing and fire protection.

Cross-connection Control

Cross-connections between reclaimed water lines and potable water lines are strictly prohibited in Florida. Reporting requirements for cross-connection control activities were added to the annual reuse report form in 1999. Appendix G summarizes cross-connection control activities reported by reuse systems for the reporting period Oct. 1, 2024, to Sept. 30, 2025.

Of the 382 reuse systems that provided reclaimed water during the 2025 reporting year, 11 reported identifying and eliminating one or more cross-connections. A total of 33,447 new connections to public access reuse systems were reported as having occurred during the reporting period. A reported 32,353 (96.7%) of the new connections were inspected to ensure that no cross-connections had been created.

The “2012 Guidelines for Water Reuse” published by the U.S. Environmental Protection Agency (EPA) provides guidelines for establishing cross-connection prevention and control programs. Utilities should consult these EPA guidelines for implementation and enforcement of cross-connection control programs.

Previous Inventories and Trends

DEP has published reuse inventories since 1998. Table 9 shows a summary of the total number of domestic wastewater treatment facilities providing water for reuse, reuse capacities and capacity ratios of the reuse facilities, and average reuse flow rates and flow ratios recorded for the current and the previous 20 inventories. Figure 3 presents the growth of Florida's reuse capacity and flow as well as the capacity and flow ratios over the last 20 years.
