State of Florida
Land Management Uniform Accounting Council (LMUAC)
2026 Annual Report (Fiscal Year 2025-26)

Members:
Rick Dolan, Director of
Florida Forest Service, Department of Agriculture and Consumer Services

Alex Reed, Director
Office of Coastal and Aquatic Managed Areas, Department of Environmental Protection

Bradley Perry, Director
Division of State Lands, Department of Environmental Protection

Alissa Slade Lotane, Director
Division of Historical Resources, Department of State

Melissa Tucker, 2026 LMUAC Chair and Director
Division of Habitat and Species Conservation, Florida Fish and Wildlife Conservation Commission

Chuck Hatcher, Director
Division of Recreation and Parks, Department of Environmental Protection

Chair's Submittal and Report Abstract

The Land Management Uniform Accounting Council (LMUAC) was created by the 2000 Florida Legislature with the enactment of section 259.037, Florida Statutes (F.S.). The LMUAC is comprised of representatives from the Division of State Lands (DSL), Florida Forest Service (FFS), Division of Recreation and Parks (DRP), Office of Greenways and Trails, Florida Fish and Wildlife Conservation Commission (FWC), Office of Coastal and Aquatic Managed Areas (CAMA) and the Division of Historical Resources (DHR). The Auditor General and the Office of Program Policy Analysis and Government Accountability are providing advice and assistance to the LMUAC.

As mandated by the legislation, the LMUAC implements a uniform method for compiling and reporting accurate costs of land management activities. This includes a list of standardized land management categories and sub-categories under which the managing agencies report management activities. This consensus list is attached as an appendix to this report. Although the individual management activities vary between agencies, this structure for organization can be applied in most cases.

Since 2008, in addition to cost-accounting by categories, the report has also included information relating to: (1) available public use opportunities for each management unit (i.e., state park, forest, wildlife management area, trail or other management unit) with management costs for public access and public uses; (2) management intensity based on an analysis of natural and cultural resources, facilities and visitation for each unit; (3) amount of funds requested, received and expended for management; (4) acreages and overall management costs for each unit; (5) acres managed, cost of management and lead manager for each management unit for which secondary management activities were provided; and (6) estimated economic benefit to the public for ecosystem services provided by conservation lands.

This report contains a summary of Fiscal Year 2025-2026 expenditures by these agencies, grouped according to the established categories and sub-categories. It also includes a summary of accomplishments for each agency and outlines their mission and primary goals for state lands management.

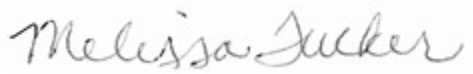

Expenditures in the various categories reflect the primary missions of individual agencies. For example, DRP has the greatest percentage of expenditures for recreation, visitor services and capital improvements. FFS and FWC manage large acreage that have passive recreational opportunities, including hunting and fishing. DHR is responsible for locating and evaluating sites that have the potential to contain significant historical or cultural resources across state managed lands. Many of their costs are incurred by providing historical resource management assistance to other agencies.

Some management costs are not included because they are difficult to calculate to a unit of management. For example, CAMA and FWC are responsible for managing submerged lands where it is difficult to quantify the actual acreage involved; expenditures by FWC for invasive

vegetation control on public managed lands (including local government, water management district and federal conservation lands); FFS provides wildfire suppression, administers the prescribed fire authorization process and silviculture expertise on most state-owned and private forested lands. This report does not include local and federal government or nonprofit conservation organizations that provide significant services towards the state's land conservation and resource-based recreation goals and objectives.

Overall, this report from the LMUAC describes how agencies allocated management funds last fiscal year. Please feel free to contact any of the agencies if you wish to obtain additional information.

Respectfully Submitted,

Melissa Tucker, Director
Division of Habitat and Species Conservation
Florida Fish and Wildlife Conservation Commission
2026 LMUAC Chair

Florida Department of Environmental Protection

The Florida Department of Environmental Protection (DEP) protects, conserves and manages the state's natural resources and enforces its laws.

Office of Coastal and Aquatic Managed Areas (CAMA)

Mission Statement

Conserving, protecting, restoring and improving the resilience of Florida's ocean, coastal and aquatic resources for the benefit of people and the environment.

Management Goals

- Protect and restore natural and cultural resources;
- Increase biodiversity of listed species;
- Reduce targeted exotic plants and animals;
- Increase compatible public use of managed areas; and
- Restore or maintain natural watershed function.

Background and Significant Developments

CAMA protects natural resources on state-owned sovereign submerged lands and coastal uplands through administration of the state's 43 Aquatic Preserves, three National Estuarine Research Reserves (NERRs), Florida Keys National Marine Sanctuary and the Coral Reef Conservation Program. CAMA also oversees the Florida Coastal Management Program, Clean Boating Program, the Resilient Florida Program, the Outer Continental Shelf Program, the Coral Protection and Restoration Program and the Beach and Inlet Management Program.

Aquatic preserves are submerged lands of exceptional ecological character to be maintained in their natural or existing conditions for future generations. There are 43 Aquatic preserves, coastal and freshwater sites, encompassing 2.9 million acres of sovereign submerged lands. NERRs were designated by joint action of the state and federal government through the National Oceanic and Atmospheric Administration (NOAA).

CAMA provides stewardship, education, training, research and monitoring programs at Florida's three NERRs (Apalachicola, Guana Tolomato Matanzas and Rookery Bay), as well as direct management of 54,792 acres of uplands. CAMA also manages an additional 5,678 acres of uplands adjacent to aquatic preserves (St. Joseph Bay State Buffer Preserve, which was formerly included with Apalachicola NERR, and three smaller sites).

The Florida Keys National Marine Sanctuary, established in 1990 by Congress and confirmed by the Board of Trustees of the Internal Improvement Trust Fund, covers 2.3 million acres of state and federal submerged lands. The Florida Keys National Marine Sanctuary contains unique and nationally significant marine resources, including the southern portion of the Florida Reef Tract (the world's third largest barrier coral reef), extensive seagrass beds, mangrove-fringed islands and more than 6,000 species of marine life. CAMA leads state co-management efforts in the Sanctuary in partnership with FWC and NOAA.

The Coral Reef Conservation Program coordinates research and monitoring, develops management strategies and promotes partnerships to protect the northern portion of the Florida

Reef Tract along the southeast Florida coast, pursuant to the U.S. Coral Reef Task Force's National Action Plan. The Coral Reef Conservation Program also implements Florida's Local Action Strategy, the Southeast Florida Coral Reef Initiative. The program leads response, assessment and restoration efforts and jointly oversees enforcement efforts for non-permitted reef resource injuries (vessel groundings, anchor and cable drags, etc.) in southeast Florida pursuant to the Florida Coral Reef Protection Act (section 403.93345, F.S.) and coordinates management efforts of the Kristin Jacobs Coral Reef Ecological Conservation Area, redesignated as Kristin Jacobs Coral Aquatic Preserve on July 1, 2024.

The Coral Protection and Restoration Program was created to focus the state's protection of Florida's Coral Reef and the administration of funds appropriated from the Legislature for these critical efforts. The Coral Protection and Restoration Program provides leadership on coral reef-related national and state legislative issues, represents Florida on the U.S. Coral Reef Task Force and U.S. All Islands Coral Reef Committee and represents DEP on the Stony Coral Tissue Loss Disease leadership team.

The Florida Coastal Management Program is based on a network of agencies implementing 24 statutes that protect and enhance the state's natural, cultural and economic coastal resources. The goal of the program is to coordinate local, state and federal government activities using existing laws to ensure that Florida's coast is as valuable to future generations as it is today. CAMA is responsible for directing the implementation of the statewide coastal management program. The Florida Coastal Management Program provides funding to promote the protection and effective management of Florida's coastal resources at the local level through the Coastal Partnership Initiative grant program.

The Outer Continental Shelf Program is responsible for coordinating the state's review, oversight, monitoring and response efforts related to activities that occur in federal waters on the Outer Continental Shelf to ensure consistency with state laws and policies and that these activities do not adversely affect state resources. Reviews are conducted under federal laws, including the Outer Continental Shelf Lands Act, Coastal Zone Management Act, National Environmental Policy Act, Deepwater Ports Act, Marine Protection, Research and Sanctuaries Act, Rivers and Harbors Act, Clean Air and Water Acts and the regulations that implement them.

The Clean Boating Program includes Clean Marina designations to bring awareness to marine facilities and boaters regarding environmentally friendly practices intended to protect and preserve Florida's natural environment. Marinas, boatyards and marine retailers receive clean designations by demonstrating a commitment to implementing and maintaining a host of best management practices. Via the Clean Boating Program, the Clean Vessel Act provides grants, with funding provided by the U.S. Fish and Wildlife Service, for construction and installation of sewage pumpout facilities and purchase of pumpout boats and educational programs for boaters. The Resilient Florida Program's mission is synergizing community resilience planning and natural resource protection tools and funding to prepare Florida's coastline for the effects of climate change, especially rising sea levels. This program is working to ensure Florida's coastal communities are resilient and prepared for the effects of rising sea levels, including coastal flooding, erosion and ecosystem changes. The program is synergizing community resilience planning and natural resource protection tools; providing funding and technical assistance to

prepare Florida's coastal communities for sea level rise; and continuing to promote and ensure a coordinated approach to sea level rise planning among state, regional and local agencies.
A healthy beach and dune system provides protection for upland development and critical infrastructure, preservation of critical wildlife habitat for threatened and endangered species and a recreational space that drives the state's tourism industry and economy. To protect, preserve and manage Florida's valuable sandy beaches and adjacent coastal systems, the Legislature adopted the Florida Beach and Shore Preservation Act, Chapter 161, F.S., in 1986. The Act provides for the creation of a statewide, comprehensive beach management program that integrates coastal data acquisition, coastal engineering and geology, biological resource protection and analyses, funding initiatives and regulatory programs designed to protect Florida's coastal system both above and below the water line. This comprehensive approach allows DEP's Beaches Programs to collaborate with coastal communities to address erosion caused by managed inlets, imprudent construction, rising seas and storm impacts. DEP's Beaches Programs consist of the following: Beach Survey Services, Coastal Engineering and Geology Group, Coastal Construction Control Line Program, Beaches, Inlets and Ports Program and Beach Management Funding Assistance Group. CAMA will seek to officially change the office's name to the Office of Resilience and Coastal Protection in an upcoming legislative session.

One tool for protection of Florida's significant waters has been the acquisition of coastal lands to buffer them from upland development. Where appropriate, CAMA manages these lands. CAMA manages 60,470 acres of uplands in its three NERRs, St. Joseph Bay State Buffer Preserve and select state-owned uplands adjacent to the Pinellas County Aquatic Preserve, Lemon Bay Aquatic Preserve and Gasparilla Sound-Charlotte Harbor Aquatic Preserve. These lands and waters have high value for low impact recreational activities, such as hiking, biking, nature appreciation, boating and fishing. Population growth has increased the demand for public outdoor recreation, contributed to the degradation of ecosystems and made resource management of the protected lands and waters more challenging. Growth along Florida's coasts, along with its $562 billion contribution to Florida's economy, makes protection of natural coastal areas particularly important. It is, therefore, essential that public and private entities work together for the restoration and protection of all state lands.

CAMA manages and restores submerged and upland resources through adaptive, science-based resource management programs such as prescribed burning, removal of invasive species, revegetation and restoration of degraded habitats and water regimes. CAMA also conducts applied coastal research to contribute valuable knowledge that addresses CAMA's management program needs and those of the coastal and ocean science community at large. Some of CAMA's scientists have published key research in peer-reviewed journals, bringing the program into the national and international spotlight. CAMA works hand in hand with marine dependent private industry on issues important to their business base. Profession training and technical assistance are offered.

CAMA's submerged lands are not gated and do not have turnstiles. They are always open to the public for commercial and recreational use. CAMA's oversight of these lands enhances private industry and public recreation. For example, Biscayne Bay Aquatic Preserves' boundary runs from Oleta River near Arch Creek in the north, down into Little Card Sound in Key Largo, not including Biscayne National Park. Biscayne Bay is Miami-Dade County's economic driver. The

updated Biscayne Bay Economic Study (2023) showed the bay contributed $64 billion in output, $23 billion in income, 448 thousand jobs and $4 billion in tax revenue for Miami-Dade County. Encouraging environmental stewardship in the community through education and outreach is as important to conservation as good resource management practices. CAMA has built state-of-the-art environmental learning and visitor centers at each of its three NERRs to conduct education and outreach programs.

During FY 2025-26, visitors to CAMA's four managed upland reserves generated 4,919 jobs, $21.5 million in sales tax revenues and a total economic benefit of $307,562 million to local communities. The total number of visitors rose from 3,194,834 to 3,348,559 in FY 2025-26. Volunteer hours at CAMA's four primary upland reserves rose to 145,165, demonstrating continued strong community support.

Division of Recreation and Parks (DRP)

Mission Statement

The mission of DRP is to provide resource-based recreation while preserving, interpreting and restoring natural and cultural resources. DRP carries out this mission by making high quality outdoor recreation opportunities available to the public and by implementing a natural systems approach to resource management.

Background and Significant Developments

During FY 2025-26, DRP managed 820,124 acres of land and water in 176 separate management units as part of Florida's state park system. DRP was staffed by 1,041.5 Full Time Equivalent (FTE) positions. The operating budget for the state park system exceeded $154 million and the capital improvement budget exceeded $81 million, including the disaster funds for the hurricanes. The 176 state parks and trails had an overall direct economic impact of over $3.5 billion on local economies throughout the state in FY 2025-26. Over $251 million in sales tax revenue was generated and approximately 45,687 jobs were supported as the result of the state parks and trails operations.

Resource Management

During FY 2025-26, DRP was challenged by extremely dry weather conditions; the most severe drought since 2012. Much of the state received half of its normal rainfall in September 2025. The drought became significantly worse in January, which resulted in county burn bans and state park-imposed burn suspensions for the majority of February. Subsequently, dry conditions and increased fuel loads presented significant challenges for prescribed fire.

DRP conducted prescribed burns on 59,736 acres which is approximately 4,000 acres less than the historic median value. A total of 42,205 acres were burned during the fourth quarter, marking the third most productive burn quarter over the past 24 years. DRP conducted prescribed burns in 57 parks. While still focused on increasing the number of trained fire leaders, DRP hosted Florida Fuels and Weather, S131 Advanced Fire Fighter, S290 Intermediate Wildland Fire Behavior, RT-130 Burn Boss Refresher, Engine Academy and a BK Radio programming class. Aligned with wildland fuels management, DRP completed 770 acres of mechanical fuel reduction, 385 acres of hand clearing in sensitive habitats and 1 acre of timber harvest for the express purpose of natural community restoration.

DRP treated 6,453 infested acres of invasive plants (a 28% increase since the previous fiscal year) spread across 32,655 gross acres. Invasive plant surveys or treatments were conducted at 163 parks across the state.

DRP made progress in FY 2025-26 on major landscape level natural community restoration projects in the Florida Panhandle, including approximately 636 acres of sandhill restoration at Torreya and Bald Point State Parks.

DRP completed hydrologic restoration projects at eight parks, affecting 493 acres of wetland or aquatic habitats and resulting in improved water quality and wildlife habitat. Notable achievements include the completion of a major point bar restoration project at Weeki Wachee Springs State Park, which restored 30 point bars using wetland vegetation to recreate marsh

habitat in areas previously occupied by open water. Additionally, major low water crossing projects were completed at Myakka River State Park and Collier Seminole State Park, totaling 14,371 square feet and all resulting in significant restoration of historic stream or sheet flow hydrology.

Imperiled species management included daily sea turtle nesting surveys at 40 coastal parks, including 12 index beaches. The FY 2025-26 nesting season saw 8,174 loggerhead, 1,990 green, 153 leatherback and two Kemp's Ridley sea turtle nests on DRP-managed beaches.

For the coastal management of the 40 beach parks in the Florida Park Service, beach nourishment planning and/or implementation occurred at Curry Hammock State Park, Deer Lake State Park, T.H. Stone Memorial St. Joseph Peninsula State Park, Gasparilla Island State Park and Bahia Honda State Park. Nourishment is performed to maintain critical habitat for imperiled plants and wildlife, as well as to provide quality visitor use areas. DRP land managers continue to utilize strategic partners to support long-term maintenance of coastal natural communities through cost-sharing and improved resource allocation.

In FY 2025-26, the cultural resource section presented at several events focusing on developing cultural resource management knowledge among field staff. In addition to presentations and showcase sessions for both Ranger Academy classes, section staff presented on the Statewide Historic Object Inventory Initiative and lead two statewide trainings and one district-wide training on DHR's Compliance and Review process.

A major restoration project of the Orman House at Orman House Historic State Park was completed with the section contributing to planning and execution of preservation actions and reinstallation of household furnishings and collections objects. The section aided DRP's Interpretive Services with their renovation of the exhibits at John Gorrie Museum State Park, assisting with planning, installation and collections care. Section staff also continued work on the design and development of the Fort Taylor visitor center exhibit.

Section staff contributed to preparations for the FY 2026-27 renovation at the Gregory House at Torreya State Park, the planned return of the Marjory Stoneman Douglas collection to the historic Marjory Stoneman Douglas house in Coconut Grove and conducted the transition from the legacy PastPerfect 4.0 to PastPerfect 5.0 museum collections management software, laying the groundwork for eventual transition to the Past Perfect Web Edition.

Finally, the section documented the donated collection of historic images from the Boomer House at Koreshan Historic State Park, interviewed the owner Nola Boomer and participated in the initial unit management planning effort for the addition of the Boomer parcel to Koreshan Historic State Park.

Visitor Services

During FY 2025-26, over 30.1 million visitors enjoyed the state parks and trails, generating over $81 million in revenue from user fees and concession activities. Since 1999, state park attendance has grown from 14.6 million to over 30.1 million, an overall increase of

approximately 106%. This was the result of both increased marketing and promotion activities and the development of additional recreation facilities in the parks.

Volunteers and Citizen Support

Working alongside park staff in FY 2025-26, Florida State Parks hosted 4,741 regular service volunteers (park residents, campground hosts, individuals, Citizen Support Organization (CSOs)) and 12,170 occasional service volunteers who contributed a combined total of 906,483 hours of service. The work performed by these 16,911 volunteers would have required an additional 492 FTE to accomplish. The value of the volunteer time to the State of Florida is $35 million based on the national value of each volunteer hour $34.79 calculated by the Independent Sector value of volunteer time (independentsector.org/research/value-of-volunteer-time/).

Staffing

Since 1999, combined central office and field staffing increased by a little over 1.5%. Greater use of volunteers and outsourcing, more aggressive pursuit of grants, increase in multiple parks administered by one park manager and use of temporary or seasonal employees have helped supplement permanent park employees.

Revenue

Since 1999, the total revenue generated by the state parks increased from $25.6 million to $81.5 million, an increase of 218%.

Division of State Lands (DSL)

Mission Statement

DEP, the state's lead agency for environmental management and stewardship, is a diverse agency established to protect and manage our state's natural resources, including our air, water and land. DSL's core mission is to provide consistent and efficient real estate and land management services to the Board of Trustees of the Internal Improvement Trust Fund.

Background and Significant Developments

Although DSL is not primarily a land managing agency, it is responsible for monitoring approximately 487,807.53 acres of conservation easements purchased with Florida Forever, American Rescue Plan Act, Preservation 2000 and other legislatively appropriated funds, or obtained through other means such as donations and land exchanges. DSL's Office of Environmental Services has contracts with the Florida Natural Areas Inventory (FNAI) to conduct site visits and produce monitoring reports.

In FY 2025-26, the state acquired 26 conservation easements to be monitored by DSL's Office of Environmental Services:

Apalachicola River: William Keen
Apalachicola River: Joseph Keen
Aucilla-Wacissa Watershed: Moon Lake Ranch, LLC
Aucilla-Wacissa Watershed: Adams/Moon Lake Ranch, LLC
Aucilla-Wacissa Watershed: Wooten
Bar-B Ranch: Bar-B Ranch, Inc.
Camp Blanding to Raiford Greenway: Blackbottom Holdings, LLC
Caloosahatchee Big Cypress: Finca Vigia, LLC
Caloosahatchee Big Cypress: Hoot Holdings, LLC
Caloosahatchee Big Cypress: Howard
Coastal Headwaters Longleaf Forest: Evergreen TimberCo FL, LLC
Big Bend/Holopaw Ranch: Lake's Place, LLC
Green Swamp: Watkins
Green Swamp: Vinson/Skaggs
Lettuce Creek Cattle Company: Lettuce Creek Cattle Company, Inc.
Little Orange Creek Corridor, Little Orange Creek, LLC
Larkin Ranch: Sid Larkin & Son, Inc.
Matanzas to Ocala Conservation Corridor: Hoffmeister Trust
Mill Creek: Ocala Lumber Sales
Pinhook Swamp: Thomas
Raiford to Osceola Greenway: Weyerhaeuser Forest Holdings, Inc.
Ranch Reserve: Kenansville Ranch, LLC
Ranch Reserve: Rockin HF, LLC
St. Joe Timberlands; The Conservation Fund
Waccasassa Watershed: M3BLT, LLC
Waccasassa Watershed: Rocky Hammock Timber Corporation

In FY 2025-26, DSL monitored 37 conservation easements and Green Swamp land protection agreements totaling approximately 65,091 acres for a total of $84,947. DSL monitors conservation easements every 36 months.

Florida Department of State

Division of Historical Resources (DHR)

Mission Statement

To identify, evaluate, manage, promote and protect the historical and archaeological resources of Florida. DHR's Director serves as Florida's State Historic Preservation Officer and acts as a liaison with the national historic preservation program of the National Park Service with the U.S. Department of the Interior. DHR, formerly the Division of Archives, History and Records Management, was established in 1967.

Historical Resources Management Goals

- To protect Florida's known and potential historical and archaeological resources;
- To cooperate with agencies, groups and individuals in conducting comprehensive inventories of historical resources throughout the state;
- To develop a statewide comprehensive historic preservation plan;
- To identify properties eligible for listing in the National Register of Historic Places;
- To ensure that historic resources are taken into account at all levels of planning and development;
- To establish and maintain an inventory of historic sites and properties known as the Florida Master Site File;
- To provide public information, education and technical assistance regarding historic preservation programs; and
- To establish guidelines for state agency responsibilities relating to historic sites and properties in accordance with section 267.061(2), F.S.

Background and Significant Developments

DHR holds title to "all treasure trove, artifacts, and such objects having intrinsic or historical and archaeological value which have been abandoned on state-owned lands or state-owned sovereignty submerged lands" for administration and protection (section 267.061(1)(b), F.S.). The Bureau of Archaeological Research (BAR) maintains state-owned artifact conservation and collections facilities at its Tallahassee office. At the end of FY 2025-26, these facilities maintained 731,200 inventory line items comprising well over 3.5 million individual artifacts at DHR, an increase of 15,839 from the previous year. In total, 79,809 inventory line items are currently on loan for exhibit and study to 92 unique institutions. This represents an increase of 794 objects or groups of objects over the previous year.

DHR is also responsible for maintaining the database of recorded historical resources in state ownership in the Florida Master Site File. At the end of FY 2025-26, there were 13,488 historic properties recorded on state lands. This includes 9,771 archaeological sites, 2,133 historic buildings and structures, 177 historic cemeteries, 313 historic bridges and 1,094 resource groups such as historic landscapes, canals, roads and railroads. Of these properties, 206 are listed in the National Register of Historic Places and 19 have been designated as National Historic Landmarks. The Florida Master Site File is also the central state repository for reports and other manuscripts relevant to state-owned prehistoric and historic sites, including 6,838 field survey reports that occurred on state-owned lands.

Staff from DHR's Public Lands Archaeology Program (PLA) assess state-owned lands to identify areas of archaeological sensitivity, conduct surveys to locate and record sites, prepare nominations of sites to the National Register of Historic Places, provide damage assessments on looted and vandalized sites, oversee the archaeological research permit program and provide management recommendations for site preservation and protection. Since 1990, PLA staff have surveyed over 1.3 million acres of land on 284 state-managed properties and recorded or updated 1,565 archaeological and historical sites. During FY 2025-26, PLA staff excavated a portion of a large 19th century pit feature at the Grove Museum in Tallahassee and recorded 19 century coastal structures in St. Marks. PLA staff conducted site visits and Land Management Reviews at numerous state properties, recording or updating sites at Topsail Hill Preserve State Park, Edward Ball Wakulla Springs State Park, Letchworth-Love Mounds State Park, J.W. Corbett Wildlife Management Area and others. PLA staff delivered two Archaeological Resource Management training courses to land managers from across the State. PLA staff continued providing monthly archaeological site tours at Mission San Luis.

PLA staff assist other state agencies with their historic preservation responsibilities by participating in an advisory capacity on Land Management Reviews and commenting on Unit Management Plans prior to their review by the Acquisition and Restoration Council. During FY 2025–26, PLA staff served on Management Advisory Groups and advised Land Management Review teams for over 40 state parks, state forests and wildlife management and environmental areas.

DHR is statutorily responsible for reviewing, issuing and monitoring permits for archaeological investigations on state lands by other entities (section 267.12, F.S.). During FY 2025–26, PLA staff reviewed 99 such permit applications. Additionally, DHR is responsible for protecting unmarked human remains on state lands, including consultation with Native American tribes (section 872.05, F.S.). There are 672 sites with evidence of human remains on state lands, mostly Native American peoples.

Submerged cultural resources on state-owned terrestrial and state-owned sovereignty submerged lands are also a focus of DHR's archaeology programs. Sovereign submerged lands under the State of Florida's management total over 11,618,561 acres. At the end of FY 2025-26, there were 1,419 submerged cultural resources recorded with the Florida Master Site File, including submerged prehistoric sites, historic shipwrecks and dugout canoes. FY 2025-26 provided archaeologists from the BAR Underwater (UW) an opportunity to engage in numerous professional presentations and outreach events and to conduct fieldwork. Staff presented on underwater archaeology to various groups around Florida including podcasts on underwater science, students at Tallahassee Preparatory Academy, the St. Augustine Lighthouse science camp, Young Engineers of Tallahassee and students of various Lego Robotics Teams. Staff attended the annual Dive Equipment & Marketing Association conference. BAR UW staff conducted multiple field sessions, including numerous site visits to record new canoes and shipwrecks; interagency fieldwork with FWC, Florida Public Archaeology Network and NOAA across the state; and a remote sensing survey in Monroe County. BAR UW staff conducted geophysical analysis on 14,000 km of bathymetric Light Detecting and Ranging (LiDAR) and multibeam sonar data, supporting cultural resource identification and compliance for the Florida

Seafloor Mapping Initiative. BAR UW staff conducted routine training related to scientific diving and completed six reports.

DHR designs and conducts an archaeological and historic site training program for state lands management personnel in other agencies. The PLA program trains state agency staff in protecting and preserving historical resources through the Archaeological Resource Management training program. Those who take the training receive a certificate to conduct monitoring activities in accordance with review and compliance recommendations, thereby reducing the time and money spent to comply with state regulations. During FY 2025-2026, two such trainings were offered, reaching 87 individual staff members from DEP, FFS and FWC.

Cost Savings to Land Managing Agencies

DHR's programs for archaeological site surveys and assessments on state lands, curation of state-owned artifacts and training programs for state land managers have resulted in significant savings to state land managing agencies such as CAMA, Office of Greenways and Trails, DRP, FFS and FWC. As demonstrated in the totals reported to the LMUAC, the amounts spent by these agencies for Cultural Resources Management comprise a small fraction of their overall expenditure. Archaeological reconnaissance surveys, site damage assessments and artifact curation are services that do not have to be contracted by the land managing agencies because DHR provides these services to them. Also, DHR's training programs prepare state land managers to handle certain cultural resource issues without direct involvement of state or private archaeologists, likewise saving agency costs. Davis Productivity Awards in 2007, 2008 and 2010 recognized the DHR's training programs for cost savings to land managing agencies of almost $900,000.

Florida Fish and Wildlife Conservation Commission

Mission Statement
To manage fish and wildlife resources for their long-term well-being and the benefit of people.

Land Management Goals
- To achieve and maintain the natural diversity, abundance and distribution of wildlife;
- To provide uses of wildlife on an optimum, sustained-use basis;
- To maintain, increase and ensure the abundance and/or distribution of threatened and endangered wildlife to the point they are no longer threatened or endangered;
- To increase awareness, appreciation and understanding of wildlife and its needs by Florida's residents and visitors;
- To increase the enjoyment of wildlife by Florida's residents and visitors; and
- To maintain healthy wildlife populations at levels compatible with their requisite habitats, surrounding land uses and public demands for wildlife-related recreation.

Background and Significant Developments
FWC came into existence on July 1, 1999, as the result of a constitutional amendment proposed by the Constitution Revision Commission and approved by Florida voters in the 1998 General Election. In FY 2025-26, FWC managed 6,169,008 acres established as Wildlife Management Areas, Wildlife and Environmental Areas, Public Waterfowl Areas, Public Use Areas, Fish Management Areas or Public Small Game Hunting Areas. FWC has lead management responsibility for 59 managed areas totaling 1,540,704 acres, and the balance of this land base (4,628,304 acres) is state, water management district, federal and private lands in FWC's management area system.

FWC provides natural resource management expertise, public use administration and law enforcement for all areas within the management area system. FWC integrates scientific data with habitat management techniques to develop and implement conservation strategies necessary to sustain the natural biodiversity of Florida. Conservation efforts are focused on an ecosystem or landscape scale to provide for the greatest benefits to the widest possible array of fish and wildlife species. Public use administration encompasses the administration of hunting and fishing seasons on all areas within the management area system as well as all other public use activities on the FWC lead areas. Law enforcement efforts encompass all conservation lands within the state of Florida.

During FY 2025-26, over $2.3 million in revenue was derived from various activities on 25 different areas. Activities generating revenue included day use fees, grazing leases, timber harvest, citrus harvest, farming leases and a campground concessionaire.

Volunteers are an important component to completing many projects on several of the FWC lead areas. For FY 2025-26, there were 7,824 volunteer hours expended with an estimated value of $278,455.

Invasive Plant Management

FWC's Invasive Plant Management Section's (IPMS) programs direct significant staff and monetary resources to controlling and eradicating invasive exotic plants on lands managed by other public agencies. In FY 2025-26, the IPMS spent the following for management of terrestrial invasive exotic plants on public conservation land.

MANAGER	COST	ACRES
Cities	$224,540	322
Counties	$2,201,897	8,043
Local Total	$2,426,437	8,365
DEP[1]	$42,025	114
FFS	$889,026	4,649
DRP	$2,124,837	7,778
FWC[2]	$399,190	62,268
Universities[3]	$154,721	759
Water Management Districts[4]	$1,744,335	9,988
State Total	$5,354,134	85,556
Bureau of Indian Affairs[5]	$119,816	958
U.S. Department of Defense[6]	$67,214	226
National Park Service	$735,650	1,998
U.S. Department of Agriculture[7]	$0	0
U.S. Forest Service[8]	$339,756	1,587
U.S. Fish and Wildlife Service[9]	$1,815,875	7,455
Federal Total	$3,078,331	12,224
Grand Total	$10,858,882	106,145
MANAGER	**COST**	**ACRES**

[1] DEP, other than DRP. Includes Bureau of Mine Reclamation and CAMA.
[2] Wildlife Management Areas, Wildlife Environmental Areas and Public Small Game Hunting Areas. FWC's Wildlife Habitat Management Section has its own funding for invasive plant management, but the Melaleuca money is used on their properties. In FY 2025-26, IPMS contributed additional funding for projects in new acquisition lands.
[3] Conservation lands are managed by Florida's state universities; University of Florida.
[4] Florida's Water Management Districts, including the annual $1 million Melaleuca Program and Loxahatchee National Wildlife Refuge (aka Water Conservation Area 1). This refuge is managed by the U.S. Fish and Wildlife Service (USFWS), except for invasive plant management. The South Florida Water Management District owns this property and manages invasive plants with cooperative funding from FWC and USFWS.
[5] U.S. Department of the Interior, Bureau of Indian Affairs.
[6] U.S. Department of Defense, conservation land managed on military installations.
[7] U.S. Department of Agriculture, other than the U.S. Forest Service; in this case, one of their research stations.
[8] U.S. Department of Agriculture, U.S. Forest Service; Apalachicola and Ocala National Forests.
[9] U.S. Department of the Interior, USFWS; National Wildlife Refuges other than Loxahatchee National Wildlife Refuge.

IPMS also expended approximately $8,012,053 managing aquatic plants in FWC Fish Management Areas and an additional $12,277,475 managing aquatic plants in other public waterbodies. Public waterbodies are state-owned waters with improved boat ramps that are open to the public.

Law Enforcement

FWC's Division of Law Enforcement is responsible for protecting Florida's natural resources, including fish, wildlife and the environment, while providing a safe atmosphere for residents and visitors to recreate. FWC officers have full police powers and statewide jurisdiction. They patrol rural, wilderness and inshore and offshore areas and are often the sole law enforcement presence in many remote parts of the state. These areas include FWC managed lands, state forests and state parks. For FY 2025-26, FWC spent $19,064,979 for law enforcement activities on lead managed areas, $55,620,782 on non-lead areas established within the Wildlife Management Area system and $4,778,690 on state parks and state forests not established within the Wildlife Management Area system.

Florida Department of Agriculture and Consumer Services

Florida Forest Service (FFS)

Mission Statement

Protect Florida and its people from the dangers of wildland fire and manage Florida's forest resources through a stewardship ethic to ensure that these resources are available for future generations.

State Forest Management Goals

- Practice sustainable forest management for the efficient generation of revenue and in support of state forest management objectives;
- Provide for resource-based outdoor recreation opportunities for multiple interests;
- Restore and manage healthy forests and native ecosystems ensuring the long-term viability of populations and species listed as endangered, threatened or rare, and other components of biological diversity including game and nongame wildlife and plants;
- Protect known archaeological, historical, cultural and paleontological resources;
- Restore, maintain and protect hydrological functions related to water resources and the health of associated wetland and aquatic communities; and
- Provide research and educational opportunities related to natural resource management.

Background and Significant Developments

FFS has been in existence since 1928. State forest management first began in 1936 with the establishment of the original 6,911-acre Pine Log State Forest in Washington and Bay counties. By the late 1950s, additional acquisitions brought the total state forest system acreage to 305,625. And through the Preservation 2000 program in the 1990s and Florida Forever in the 2000s, the state forest system has expanded from 11 state forests totaling 349,465 acres, to 38 state forests and a working cattle ranch (Babcock Ranch Preserve) with 1,236,322 acres as of June 30, 2026.

Management strategies for Florida's State Forests center on the multiple-use concept, as defined in sections 589.04(3) and 253.034(2)(a), F.S. Multiple-use management is the harmonious and coordinated management of timber, recreation, conservation of fish and wildlife, forage, archaeological and historic sites, habitat and other biological resources, or water resources so that they are utilized in the combination that will best serve the people of the state, making the most judicious use of the land for some or all of these resources and considering the relative values of the various resources. Local demands, acquisition objectives and other factors influence the array of uses that are compatible with and allowed on any specific area of the forest. This management approach is believed to provide for the greatest public benefit, by allowing compatible uses while protecting overall forest health, native ecosystems and the functions and values associated with them. FFS receives appropriations for implementing land management activities including prescribed burning, reforestation, silvicultural management, habitat restoration, road maintenance, invasive species management, recreation and managing plant and animal species, including the protection of listed flora and fauna.

In FY 2025-26, the Legislature and Governor continued to appropriate funding for conservation lands, resiliency and clean water infrastructure. FFS appropriations for FY 2024-25 totaled $32

million and in FY 2025-26 totaled $20 million for enhanced land management activities including invasive species eradication; reforestation; habitat restoration; boundary, survey and forest inventory; road and facility enhancements; recreation area upgrades; and land management equipment. FFS' gross cost per acre for FY 2025-26 was $46.18 with the net cost (total cost minus state forest revenue) per acre being $39.14. The land management funding has enabled FFS to significantly improve state forests through prescribed fire, reforestation, strengthened invasive species management and enhanced recreational activities. Thanks to this support, FFS achieved years' worth of advancements in these efforts.

During FY 2025-26, FFS reforested 3,472 acres on FFS-managed state forests, conducted prescribed burns on 94,474 acres and harvested 350,531 tons of timber on FFS-managed state forests with an estimated economic benefit of approximately $1.16 billion, treated over 23,913 acres of non-native invasive plants and maintained approximately 2,788 miles of roads available for public access on FFS-managed lands. FFS actively utilizes volunteers which are important assets to FFS, with 140 active volunteers providing over 67,301 hours of services during FY 2025-26. FFS provided public access for over 6,157,274 visitors for recreational and educational opportunities on state forests. State forest visitors had an estimated economic benefit of $273,103,094 to local communities.

FFS has five state forests in the Sustainable Forestry Initiative (SFI) program. SFI is a comprehensive system of principles, objectives and performance measures developed by professional foresters, conservationists and scientists that combines the perpetual growth and harvesting of trees with the long-term protection of wildlife, plants, soil and water quality. The SFI program was developed in 1994 to ensure North America's valuable forests were protected and to document the commitment of forest products industry members to keep our forests healthy and to practice the highest level of sustainable forestry. The SFI forest management standard is based on 13 Principles, 17 Objectives, 41 Performance Measures and 141 Indicators.

In 2015, Blackwater River State Forest and Tate's Hell State Forest were certified, and in 2018 John M. Bethea, Four Creeks and Jennings State Forests were certified to the 2015-2019 Forest Management Standard by NSF International, a third-party certification company. Recently, these forests were certified to the SFI 2022 Forest Management Standard promoting sustainable forestry that include measures to protect water quality, biodiversity, wildlife habitat, threatened and endangered species and Forests with Exceptional Conservation Value. Through the SFI program, FFS is committed to continuously improve responsible forest management by meeting or exceeding applicable water quality laws and regulations, with measures to manage and protect water, wetlands and riparian zones, as well as continuing evaluation of habitat and biodiversity impacts from forest activities.

FFS provides expertise to other agencies in silvicultural management to oversee timber harvesting, fire management, reforestation, insect pest problems and related activities. Since 1999, the Florida Legislature has required all land management agencies to assess the potential for timber management on managed properties over 1,000 acres. FFS assists other state agencies, as well as municipal agencies, in this assessment.

FFS is responsible not only for land management, but it is also the lead governmental agency in Florida responsible for wildfire mitigation and suppression, for both non-federal public and private lands, totaling over 24 million acres. In addition to wildfire suppression, FFS is responsible for issuing all prescribed fire authorizations statewide, managing an established wildland fire training center (Basic Fire Control Training, Certified Pile Burning Training, National Wildfire Coordinating Group Training), providing certification courses for prescribed fire managers, providing "Firewise" wildfire mitigation courses for urban communities and conducting wildland-urban interface wildfire threat mitigation. Additionally, FFS provides disaster support to the State of Florida for all-hazard emergency incidents and provides wildland fire support to other states across the nation. During the period covered by this report, FFS conducted 94,474 acres of prescribed fire on the conservation lands it manages. FFS also responded to 3,484 wildland fires on public and private properties that impacted over 245,272 acres. In FY 2025-26, FFS issued 75,168 prescribed burn authorizations across the state of Florida for a total of 1,235,024 acres, many of which are state-owned conservation lands.

FFS operates under the budget that provides for management of the state forests and wildfire control on publicly and privately-owned forest land (over 24 million acres). This includes FFS-managed lands listed in this report. The annual cost of wildfire protection provided by FFS on other state-owned lands that are not FFS-managed was approximately $10,288,800. This cost is not incorporated into FFS land management figures in this report.

Ecosystem Services

Reporting of Ecosystem Services

Ecosystem services are the benefits people obtain from ecological systems. These benefits have been divided into "provisioning" services such as food, medicine, water, fuel and fiber; "regulating" services such as erosion and flood control, drought protection, air and water quality, and prevention of disease; "cultural" services such as recreational, spiritual, religious and other nonmaterial benefits; and "supporting" services such as soil formation and nutrient cycling.

Prevention of ecosystem degradation has long been one of the goals of land conservation, with the often-stated outcome of such land protection being the preservation of "essential ecosystem services." However, the translation of ecosystem services such as "clean air and abundant clean water" into economic values that allow comparisons with the economic values of other activities (e.g., deriving market value from extraction of timber or mining products) is a complex challenge. Each of the services listed above carries economic value, but the science of calculating those values is still a developing field. Economists and ecologists are increasingly joining forces to assign dollar values to different ecosystem services through various modeling approaches, but many are not yet available or may not be specific to Florida ecosystems.

To understand the full economic value of Florida's conservation lands and explain their vital importance to the state's economy and quality of life, it will become ever more necessary to develop ways of measuring the values of ecosystem services provided by those lands. To advance this effort, in 2008 the Florida Legislature added a requirement for agency reporting of such values to the LMUAC Report. Section 259.037(3)(b)5, F.S., states that each reporting agency shall also "include a report of the estimated calculable financial benefits to the public for the ecosystem services provided by conservation lands, based on the best readily available information or science that provides a standard measurement methodology to be consistently applied by the land managing agencies. Such information may include but not be limited to, the value of natural lands for protecting the quality and quantity of drinking water through natural water filtration and recharge, contributions to protecting and improving air quality, benefits to agriculture through increased soil productivity and reservation of biodiversity, and savings to property and lives through flood control."

DSL and the land managing agencies have undertaken a systematic effort to assemble existing research, agency data reporting and other relevant information to fulfill this portion of the statute. To date, DSL's efforts have resulted in the identification of measuring models that are either not applicable to Florida's ecosystems, or too expensive or cumbersome to implement at the management unit level. DSL continues to gather data that will move this effort forward. The desired long-term outcomes are to:

- Establish a list of those ecosystem services provided by state conservation lands for which reasonable measurement or estimation methodologies exist;
- Build interagency consensus for a select subset of these for which reporting methodology can be established across all managing agencies;
- Coordinate learning/training opportunities for agencies to become familiar with these methodologies; and

- Discern ways of funding such data gathering and reporting activities, including identifying potential partners in that effort.

It is possible that, as an interim solution to meeting the statutory requirements, the next several years may lead to the ability to provide broad estimates of ecosystem services for the total acres of land in public ownership. Several local governments with much smaller acreage holdings are currently engaged in pilot studies to determine such broader estimates, and their outcomes will be monitored by DSL staff. However, the science for measuring such services at the unit management level does not yet exist at a level that would be feasible for implementation by the state's managing entities. If such estimates become possible, they will appear in subsequent annual reports.

Despite the current lack of data regarding the values for many ecosystem services, information does exist regarding various aspects of the financial contributions made to the state's economy through uses of Florida's conservation lands. While a more comprehensive reporting on selected ecosystem services is in the planning stages, the managing agencies have chosen, wherever possible, to provide the financial benefit information that is currently available. It is important to note that, since data collection methodology for economic impact data varies by agency, there may be significant variability in numbers reported.

Economic Benefits

Office of Coastal and Aquatic Managed Areas (CAMA)

In FY 2025-26, 3,348,559 visitors visited one of the three NERRs managed by CAMA or the St. Joseph Bay State Buffer Preserve. The visitors used the beaches, trails and fishing areas, toured the environmental learning centers and participated in boating opportunities on CAMA-managed lands. These four sites, out of the 49 CAMA areas, are the only ones that can directly count attendance, therefore, using DRP's formula for economic benefit would significantly under report CAMA's value to Florida. Using an economic model adopted by DRP for estimating local economic benefits, visitors to CAMA's managed areas generated a total economic benefit of $307 million, sales tax revenues of $21.5 million and 4,919 jobs.

Additional economic impact numbers are available from the Florida reef tract, which CAMA manages. The reef resources in Martin, Palm Beach, Broward and Miami-Dade counties are estimated to support 71,000 jobs and $6.3 billion economic benefit in southeast Florida annually. CAMA is responsible for water bodies at more than 80 state parks, providing the park's key water feature in 47% of its management units.

Division of Recreation and Parks (DRP)

Based on FY 2025-26 data, the Florida state park system had an overall direct economic impact of more than $3.77 billion on local economies throughout the state. Direct economic impact is defined as the amount of new dollars spent in the local economy by non-local park visitors and by park operations. Over $251 million were contributed to general revenues in the form of state sales taxes. In addition, approximately 45,687 jobs were supported as a result of the state parks, greenways and trails operations.

ADMINISTRATIVE UNIT	TOTAL DIRECT IMPACT [1]	INCREASED STATE SALES TAX [2]	JOBS SUPPORTED [3]
District 1	$509,543,888	$34,126,852	7,134
District 2	$513,332,862	$34,098,613	7,187
District 3	$1,057,228,426	$71,879,891	14,081
District 4	$923,065,676	$62,771,274	12,293
District 5	$713,195,979	$48,403,014	9,985
Central Office Support	$56,485,325	$0	791
Statewide	$3,772,582,156	$251,279,644	51,471

[1] Total Direct Impact: The amount of new dollars spent in a local economy by non-local park visitors and park operations.
[2] Increased State Sales Tax: The estimated amount of tax dollars the state receives as a result of park visitor expenditures.
[3] Jobs Supported: This may be any combination of seasonal, temporary, part-time or full-time employment that adds up to 16 full-time jobs per $1 million in total new expenditures in the local area. Source: [Thomas, C., Huber, C. & Koontz, L. 2012 National Park Visitor Spending Effects: Economic Contributions to Local Communities, States, and the Nation. Fort Collins, Colorado: U.S. Geological Survey & National Park Service].

Division of Historical Resources (DHR)

DHR is the state agency responsible for promoting the historical, archaeological and museum resources in Florida. The director of DHR serves as Florida's State Historic Preservation Officer, providing a liaison with the national historic preservation program conducted by the National Park Service. The economic benefits of state funding are not confined to cultural programs. State funding for local historic and archaeological preservation and history museum projects leverages financial support, as grant awards require local cost share and matching funds. While DHR's grant-in-aid programs directly support and benefit those involved with museum and preservation activities, they also provide a benefit to the local economy.

According to the Federal Advisory Council on Historic Preservation's 2008 study entitled "Statewide Studies on the Economic Impacts of Historic Preservation," research conducted in other states has consistently demonstrated the importance of heritage tourism as an economic engine. An update to the report Economic Impacts of Historic Preservation in Florida showed that in FY 2012-13, the Florida economy benefitted from $2.55 billion in direct spending on cultural heritage tourism. Of the 95 million visitors, 65% participate in culturally based activities. The overall economic impact of these visitors is $72 billion dollars, demonstrating the economic benefit of cultural heritage tourism.

In addition to supporting the preservation of historic properties, DHR also engages in the preservation of the archaeological history of Florida. On average, DHR annually receives 83.28 cubic feet of new artifacts and 2.08 cubic feet of new documents (archaeological excavation field notes, field maps and related items) for curation and storage. Archaeological objects are curated at a special facility at Mission San Luis, while the archaeological conservation laboratory is located in the R.A. Gray Building. DHR manages Mission San Luis in Tallahassee, the 17th century capital of western Spanish Florida. The mission's extensive interpretative program, including living history interpreters in period wardrobe, mission-era reconstructed building, exhibits, guided tours and educational programs are based on detailed archaeological research conducted at the site since 1983. Mission San Luis is capitalizing on their recently streamlined event planning, which has greatly increased annual visitation to the site and revenues. The

Friends of Florida History, Inc., a 501(c)(3) non-profit organization created to benefit the museums, historic sites and programs of DHR, operates a venue rental program at Mission San Luis. Revenue from the rental program helps to offset the site's operational costs.

Florida Fish and Wildlife Conservation Commission (FWC)
Hunting, fishing and wildlife viewing are just some of the activities enjoyed on state owned lands. These activities have a significant economic impact here in Florida:

CATEGORY	ECONOMIC CONTRIBUTION	JOBS
Hunting	$833 million	5,270
Fishing	$10.3 billion	65,608
Wildlife Viewing	$7.0 billion	52,183

Source: Responsive Management, Southwick Associates. Participation in and Expenditures on Outdoor Recreation in Florida. 2023.

Using the economic impact per trip calculations done by Southwick Associates in 2023 and the visitation data collected on select FWC managed units; a conservative estimate of visitor's economic impact was calculated.

Analysis was done on a per trip basis meaning a vehicle entering and exiting an area counted as one trip. The number of visitors per vehicle was not used in this analysis.

Trip data was collected on 37 managed units in FY 2025-26 and totaled more than 1.41 million trips. Using this data, the economic model estimated the following:

CATEGORY	ECONOMIC IMPACT
State Gross Domestic Product	$83,362,759
State and Local Taxes Paid	$10,126,864
Salaries and Wages	$53,081,173
Number of Jobs Created	990

Florida Forest Service (FFS)
Determining Economic Benefit from Timber Sales on State Forests
The basis for developing the value of this benefit is a report from the University of Florida to FFS titled: Economic Contributions of the Florida Forest Industry in 2023, published in April 2026. Total timber harvest in Florida was estimated at 8,695,767 tons of pulpwood and sawtimber annually. In turn, total economic contributions of Florida's forest industry were estimated at $28.78 billion in output and 103,399 jobs. In FY 2025-26, timber sales on state forests totaled 350,531 tons, which was approximately 4.03% of the estimated state total. The economic benefit from timber sales on state forests was approximately $1.16 billion and 5,003 jobs.

Determining the Local Economic Benefit from Visitors to State Forests
The number of visitors who attended a state forest managed by FFS in FY 2025-26 was 6,157,274. To determine the Local Economic Benefit from visitors to state forests, FFS utilized

DRP's method for calculating the economic benefit. The result for state forest visitation is an estimated total economic benefit on local economies of $273,103,094. Approximately 5,462 local jobs were created by state forest visitation.

Appendix A

Supporting Tables

Table A-1. Acreages and Units Managed by State Conservation Agencies

Acreages and Units Managed by State Conservation Agencies as of June 30, 2026

Agency	Lead Management[1]		Additional Management[2]	
	Acreage	Units[3]	Acreage	Units[3]
Division of State Lands	-	-	487,808	222
Division of Recreation and Parks	820,124	176	8	1
Office of Coastal and Aquatic Managed Areas	60,470	7	5,115,961	46
Florida Forest Service	1,236,322	39	544,640	18
Fish and Wildlife Conservation Commission	1,540,704	59	4,628,304	98
Division of Historical Resources	140	9	4	4
Totals	**3,657,760**	**290**	**10,776,724**	**389**

Notes:

1. Columns may not add up due to rounding.

2 Predominantly upland acres managed by a state conservation agency with primary on-the-ground management responsibilities. Mostly state-owned land titled to the Board of Trustees of the Internal Improvement Trust Fund, but also includes substantial amount of land owned by other public entities (e.g., water management districts, federal government, etc,).

3 Includes management units managed as: aquatic preserves (submerged lands); secondary manager (non-lead agency); conservation easements; or subleases to another agency for management. **Substantial acres reported in this column overlap with acreages reported under Lead Management, and with others under Additional Management** because more than one agency assists in the management of lands managed by another agency. Substantial portion of this land is not owned by the state, but is owned by the federal government, water management districts or private entities.

Notes for each agency:

- **DSL** oversees private sector management of conservation easements;
- **DRP** oversees management of sites subleased to local and federal governments for recreational trails;
- **CAMA** manages the aquatic preserves, estuarine research reserves and marine sanctuaries that are predominately submerged lands;
- **FFS** provides timber management for many sites and assists other agencies in developing timber management plans, etc.;
- **FWC** provides wildlife management and oversees hunting for other agencies; and
- **DHR** oversees management of sites subleased to counties, cities, etc. and assists other agencies in historical and archaeological resource management.

Note: FWC's wildlife mitigation parks are reported under lead management.

[3] A unit is a state park, state forest, state wildlife management area, state trail or other management unit.

TOTAL DSL Conservation Easement MONITORING	222		487,808	$84,947

Secondary/Additional Management [1] Costs of Conservation Land Management Units (Fiscal Year 2025-26)

Management Unit[2]	Type of Secondary/ Additional Management[1]	Lead Manager[3]	Acres	Annual Costs for 2nd/Add. Management
Totals by Agency				
CAMA	46		5,115,961	$6,275,486
DHR	4		4	$106,835
DRP	1		8	n/a
FFS	18		544,640	$1,177,032
FWC	98		4,628,304	$85,621,270
DSL	222		487,808	$84,947
Overall Total	**389**		**10,776,724**	**$93,265,570**

NOTES:

[1] Includes management units managed as: aquatic preserves (submerged lands); secondary manager (non-lead agency); conservation easements; or subleases to another agency for management. **Substantial acres reported in this column overlap with acreages reported under Lead Management, and with others under Additional Management** because more than one agency assists in the management of lands managed by another agency. Substantial portion of this land is not owned by the state, but is owned by the federal government, water management districts or private entities. Notes for each agency:

- **DSL** oversees private sector management of conservation easements, each of which are monitored every 18 months on average;
- **CAMA** manages the aquatic preserves, estuarine research reserves and marine sanctuaries that are predominately submerged lands;
- **DRP** oversees management of sites subleased to counties, cities etc. for recreational trails;
- **FFS** provides timber management for many sites and assists other agencies in developing timber management plans, etc.;
- **FWC** provides wildlife management and oversees hunting for other agencies; and
- **DHR** oversees management of sites subleased to counties, cities etc. and assists other agencies in historical and archaeological resource management.

Note: FWC's wildlife mitigation parks are reported under lead management.

[2] A unit is a state park, a state forest, a state wildlife management area, a state trail or other management unit.

[3] Agency acronyms:

Armory Board = Florida Dept. of Military Affairs
DOC/PRIDE = Florida Department of Corrections\Prison Rehabilitative Industries and Diversified Enterprise, Inc.
DOD = US Department of Defense
DRP = Division of Recreation and Parks
FFS = Florida Forest Service
FWC = Florida Fish and Wildlife Conservation Commission
NPS = US National Park Service
NWFWMD = Northwest Florida Water Management District
SFWMD = South Florida Water Management District
SJRWMD = St. Johns River Water Management District
SRWMD = Suwannee River Water Management District
SWFWMD = Southwest Florida Water Management District
TNC = The Nature Conservancy
USFS = US Forest Service
USFWS = US Fish & Wildlife Service

[4] Unit has two secondary managers or advisors: FFS & FWC

[5] Program responds to wildfires on all state owned forest lands, which is funded by the Florida Forest Service

[6] Conducted on non-FFS state owned forest lands, including lands managed by FWC, DRP, CAMA & DOC

[7] WMA includes lands in addition to the state forest land

[8] WMA includes lands on which FWC is lead and other lands on which FWC is a secondary manager. Funds spent on secondary management were not tracked separately, but are included under FWC lead agency entry.

[9] Within Marjorie Harris Carr Cross Florida Greenway State Recreation and Conservation Area

[10] Includes 2,940 acres that are part of MH Carr Cross Fla. Greenway State Recreation & Conservation Area. Funds spent on secondary management of this portion were not tracked separately, but are included under FWC secondary management entry.

Appendix B

Uniform Land Management Cost Categories and Subcategories

Uniform Land Management Cost Categories and Subcategories

Resource Management

Exotic Species Control

Invasive exotic plant and animal removal activities and costs for inventorying, planning, preparing, executing, evaluating, monitoring and reporting. It also includes equipment, chemicals, protective clothing and supplies, as well as nuisance native feral animal and plant control.

Prescribed Burning

Prescribed burning activities and costs for assessing, planning, preparing, executing, evaluating and reporting. It includes equipment, protective clothing and supplies.

Cultural Resource Management

Management activities and costs for assessing, planning, executing, evaluating and reporting, and for all maintenance, restoration or monitoring activities for prehistoric and historic sites, features and collection objects.

Timber Management

Activities and costs related to the establishment of a stand of potentially merchantable timber, harvest of merchantable timber and cultural treatments intended primarily to improve the growth and overall health of a stand of merchantable timber. It includes activities and costs related to the cutting of merchantable timber in natural community and habitat restoration projects.

Hydrological Management

Hydrological management and restoration activities and costs for assessing, monitoring, planning, preparing, executing, evaluating and reporting. Includes water level management, repair, removal or back-filling of ditches, canals, berms and dams. It also includes water quality and water quality monitoring.

Other

All other resource management activities and costs not captured in other specific subcategories. Examples include natural community and habitat restorations through other techniques; plant, animal or biological community survey, monitoring and research; listed species management; technical assistance; and evaluating and commenting on resource impacts to parks.

Administration

Central Office/Headquarters

Headquarters units conducting general administration of land under management by the agency. Includes upper management direction, administration and fiscal, budget, personnel, purchasing and record keeping required for operations oversight and specific programs. It includes all duties unless they specifically relate to other categories or subcategories.

Districts/Regions

Sub-state administrative districts or regions conducting general administration of the properties under their management. It includes all duties unless they specifically relate to other categories

or subcategories. General operating costs of district or region administrative facilities are also included.

Units/Projects
Conducting general administration duties at a specific management unit (state park, state forest, state wildlife management area, etc.). It includes supervisory duties, fiscal and record keeping duties and any other duties that do not specifically relate to other categories or subcategories. General operating costs for the property, such as utilities, telephones and garbage collection, are also included.

Support
Land Management Planning
Developing land management plans, required by section 253.034, F.S., includes researching and compiling plan information, materials and maps, coordinating planning activities, conducting review activities (internal reviews, public meetings, advisory group meetings, Acquisition and Restoration Council, etc.) and promulgating draft plans and final plans.

Land Management Reviews
Planning, organizing and conducting land management reviews by teams created under section 259.036, F.S. Includes preparing and responding to land management review reports. It also includes similar work conducted as part of internal agency land management reviews.

Training/Staff Development
Staff training and development costs incurred in any facet of the agency's land management activities.

Vehicle Purchase
Acquisition of any vehicle purchased primarily for land management purposes or to support any category of land management activity by the agency.

Vehicle Operation and Maintenance
Costs of operating and upkeep of any vehicle used by the agency to support any category of land management activity.

Other
Any other support activity or cost not captured by other categories or other subcategories.

Capital Improvements
New Facility Construction
Use of Fixed Capital Outlay (FCO) or other budget authority for all new facility design and construction activities. Includes new roads, parking and all other infrastructures.

Facility Maintenance
Use of FCO or other budget authority for all repairs or renovations to existing facilities, roads or other infrastructure. Also includes Americans with Disabilities Act accessibility improvements and renovations.

Visitor Services/Recreation

Information/Education Programs

Interpretive, environmental education and marketing programs that explain or promote the agency's mission or instill in visitors an understanding and appreciation for Florida's natural and cultural resources and their proper use and care. Includes signs, brochures, maps and other public information materials that are produced or disseminated.

Operations

Includes the non-administrative and non-support costs involved in providing public access to lands. Includes all actions required to manage visitor activities in a way to ensure safe and enjoyable use by the public. Includes routine maintenance, cleaning and other work required to provide safe and efficient utilization of facilities and resources that support visitor use and recreation. Includes protection activities required by staff to safeguard natural and cultural resources, facilities, material, staff and visitors.

Law Enforcement

All activities for enforcing criminal, conservation and boating laws on land, freshwater and marine environments and all costs associated with these services. Includes the provision of uniform patrol, overt and covert criminal investigations, regulation of commercial wildlife trade and the direction and administration of all law enforcement programs and activities and all associated costs.
