

Indian River Lagoon Basin Management Action Plan (BMAP) Annual Meeting

Via Webinar
April 25, 2024
1:00 PM

Webinar Registration Link:

<https://attendee.gotowebinar.com/register/3405312194019743575>

Agenda

- Background
- St. Johns River Water Management District (SFWMD) Updates
- Statewide Annual Report (STAR)
- Progress
- Upcoming BMAP Update
- Florida Department of Agriculture and Consumer Services (FDACS) Updates

Please note the FTP site for documents pertaining to the various BMAPs:

<http://publicfiles.dep.state.fl.us/DEAR/BMAP/>

For more information, contact: Diana Turner, 850-245-8825, Diana.M.Turner@FloridaDEP.gov

WEBINAR HOUSEKEEPING

Attendee Participation

Open your control panel.

Join audio:

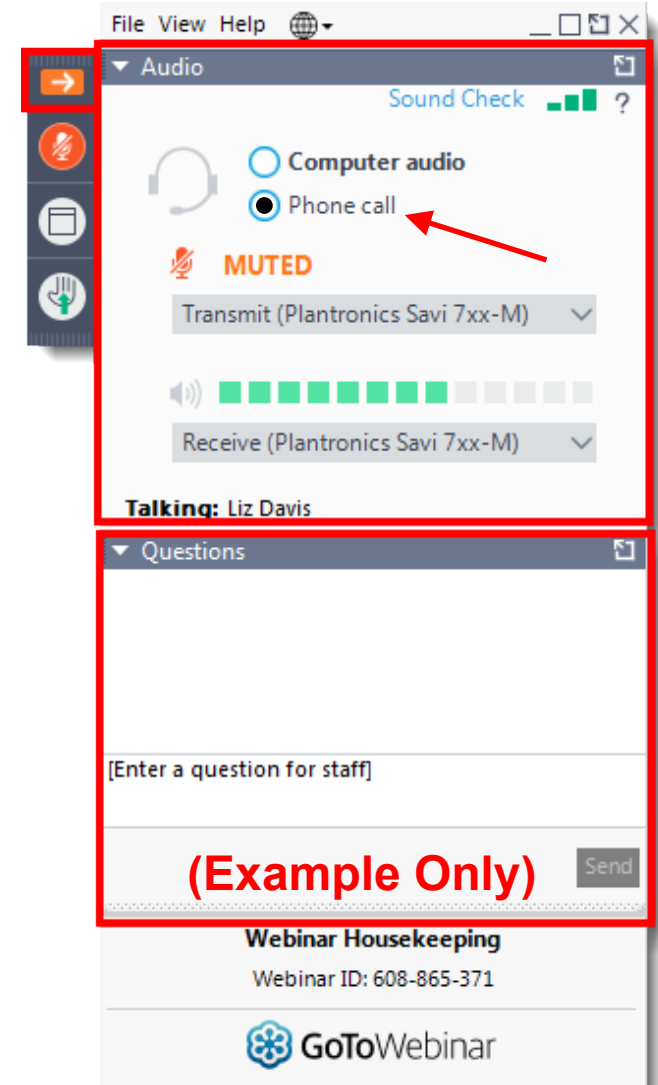

- Choose Computer Audio or
- Choose Phone Call and dial using the information provided with your registration

Attendee audio will automatically be muted.

Submit questions and comments via the **Questions** panel.

If viewing this webinar as a group, please provide a list of attendees via the **Questions** panel.

Note: Today's presentation is being recorded and will be provided on the file transfer protocol (FTP) site after the webinar.

INDIAN RIVER LAGOON (IRL) BASIN MANAGEMENT ACTION PLANS (BMAPS) ANNUAL MEETING

Diana Turner

Division of Environmental Assessment and Restoration
Florida Department of Environmental Protection

GoToWebinar | April 25th, 2024

INDIAN RIVER LAGOON BMAPS ANNUAL MEETING

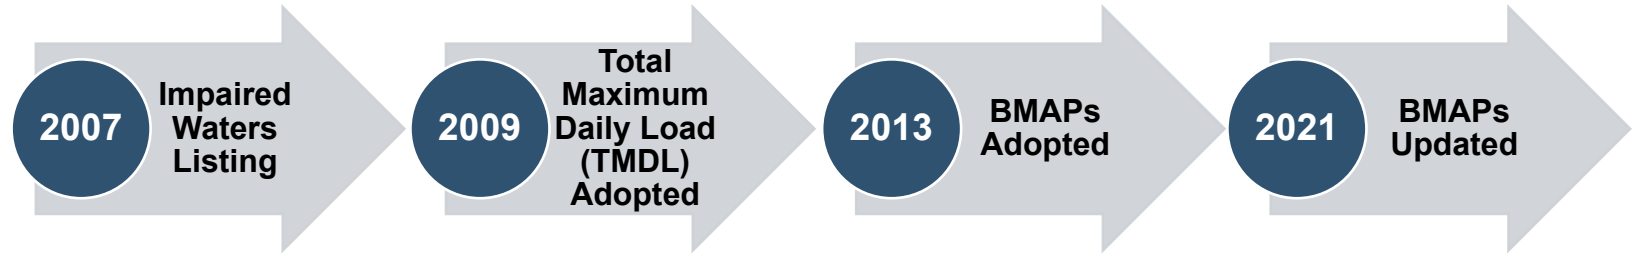

Source: SJRWMD

Agenda

- Background.
- St. Johns River Water Management District (SJRWMD) Updates.
- Statewide Annual Report (STAR).
- Annual Progress.
- Upcoming BMAP Update.
- Florida Department of Agriculture and Consumer Services (DACS) Updates.

INDIAN RIVER LAGOON BMAPS BACKGROUND

- 2021 IRL BMAPs Updates:
 - Wastewater limits implemented.
 - Allocations developed for all three BMAPs.
 - Milestones established.
 - Monitoring network solidified.

INDIAN RIVER LAGOON BMAPS BACKGROUND

Seagrass Deep Edge Assessment Data Collection – Aerial Surveys

- Conducted in seasonal window:
 - Spring – early summer.
 - About every two years.
- Aerial imagery is used to create a complete map of seagrass in the lagoon.
- Ground truthing of photographs.
 - Field Sampling Transects:
 - During aerial surveys.
 - Additional independent collection in season and off season.

INDIAN RIVER LAGOON BMAPS BACKGROUND

Seagrass Deep Edge Assessment Total Maximum Daily Load (TMDL) Targets

Source: SJRWMD

- Depth targets based on coverage from:

- Focus on 90% of the seagrass recovery estimate
- 2-step evaluation process
 - If the project zone is compliant with both steps, the project zone is achieving the TMDL depth target

Climate Data:

https://origin.cpc.ncep.noaa.gov/products/analysis_monitoring/ensostuff/ONI_v5.php

STORYMAP

INDIAN RIVER LAGOON BMAPS

Introduction

Welcome to the Central Indian River Lagoon Basin Management Action Plan (BMAP) Story Map

A Basin Management Action Plan (BMAP) is a framework for water quality restoration, containing local and state commitments to reduce pollutant loading through current and future projects and strategies. BMAPs contain a comprehensive set of solutions, such as permit limits on wastewater facilities, urban and agricultural best management practices, and conservation programs designed to achieve pollutant reduction established by a Total Maximum Daily Load (TMDL).

These broad-based plans are developed with local stakeholders and rely on local input and commitment for development and successful implementation. BMAPs are adopted by DEP Secretarial Order and are legally enforceable.

This Story Map reflects the status of BMAP projects most recently published in the Statewide Annual Report (**STAR**). Please use the tabs above to navigate through this Story Map and learn more about the Central Indian River Lagoon BMAP.

STAR STATEWIDE ANNUAL REPORT

Florida Department of Environmental Protection Statewide Annual Report 2022 Basin Management Action Plans

| | | | | | | |
|------------------------|--------------------------------|-------------------------------|-------------------------------|------------------------------|----------------------------------|-------------------------|
| Introduction | Total Maximum Daily Loads | Basin Management Action Plans | Alternative Restoration Plans | Minimum Flows & Water Levels | Recovery & Prevention Strategies | Contacts & Project Data |
| How to Use This Report | What Is the STAR? | Reductions Summary | What Are Nutrients? | What Are FIB? | What Are BMAP Projects? | |
| Nutrient BMAPs | Fecal Indicator Bacteria BMAPs | BMAP Projects | | Project Table | | |

Sorted by Alphabetical Order

- Caloosahatchee River and Estuary Basin
- Central Indian River Lagoon Basin
- Chassahowitzka-Homosassa Springs Basin
- DeLeon Spring Basin
- Everglades West Coast Basin
- Gemini Springs Basin

Click on a point to find out more information on a specific project. Or click on the Contacts and Project Data card above for a full project list.

All Basins TN Reductions Achieved by Completed and Ongoing Projects as of Dec. 31, 2022

Units are in pounds per year.

Nitrogen Reduction Phosphorus Reduction

- Report will be published by July 1, 2024, with reporting through Dec. 31, 2023.
- Summarizes accomplishments in the BMAPs statewide.
- Reports on restoration projects and management strategies.
- Data download available.

<https://floridadep.gov/STAR>

STAR BMAP PORTAL FOR PROJECT COLLECTION

- Be sure to let your BMAP coordinator know if changes in access to your projects in the portal are needed.

The screenshot displays the 'DEAR RESTORATION PROJECT COLLECTION PORTAL' interface. The header includes the 'DEP BUSINESS PORTAL' logo and the user's name, 'Alex Smith', with a 'Sign Out' button. The main content area is titled 'Project Workbook' and features a 'Search Criteria' section. Below this is an 'Updates Complete?' section with a 'Notify Coordinator' button and a message: 'Clicking this button certifies by the entity that ALL project updates through this reporting period (ending December 31st) are complete. This means: all updates to be processed for this reporting period have been submitted for coordinator review; the entity has reviewed ongoing status projects; and/or the entity assures that no changes are necessary to existing projects which are not submitted for coordinator review.' The 'Exports' section is also visible. The 'Search Results' section contains a table with columns for 'User Action Icons', 'Review Stage', 'STAR Year', 'Saved But Not Submitted', 'BMAP ID', 'Project ID', 'Lead Entity', 'Project Number', 'Project Name', 'Project Type Category', 'Project Type', 'Project Status', and 'Estimate Completion Date'. The table lists two projects: 'Otter Slough Restoration' and 'West Waterhole', both with a status of 'Completed' and an estimate completion date of 2009.

UPCOMING BMAP UPDATE COMPONENTS

- Spatial Watershed Iterative Loading (SWIL) model update.
- Entity allocation updates.
- Establish entity milestones.
- Incorporate additional projects.
- Incorporate Clean Waterways Act Requirements
- Incorporate HB 1379 requirements.
- Develop a hot spot analysis.
- Seagrass evaluation.
- Additional water quality analyses.
- Evaluate any needed updates to the monitoring network.
- Evaluate wastewater effluent limits.

HOTSPOT ANALYSIS DEVELOPMENT

OVERVIEW

Purpose:

- To highlight areas where more investigation is needed.
- To find more specific areas to focus restoration activities.
- To highlight areas where projects might have stronger results.

Analysis is NOT to determine BMAP or TMDL compliance.

Analysis:

- Analysis uses stations with two to five years of data.
- Analysis uses four statistical components to determine an overall index ranking.
- Analysis does not itself identify sources, rather identifies areas that warrant additional investigation.

HOTSPOT ANALYSIS DEVELOPMENT

COMPONENTS OF THE HOTSPOT INDEX

These four statistics calculated for the BMAP overall and used to compare against each station average:

- TN or TP concentration average.
- TN or TP 90th percentile.
- TN or TP Standard Deviation (SD).
- TN or TP Percent Frequency of Samples over BMAP Threshold.

BMAP Threshold:

- Numeric Nutrient Criteria for Southern IRL area
 - TN – 0.72 mg/L.
 - TP – 0.07 mg/L.

HOTSPOT ANALYSIS DEVELOPMENT

INDEX RANKING APPROACH

Station Concentration Average Rank

Compare to BMAP Threshold and overall BMAP average.

- Rank 0:** Station average below BMAP threshold.
- Rank 1:** Station average above threshold but below BMAP average.
- Rank 2:** Station average 2x above BMAP average.

Percentiles Rank

Compare to BMAP Threshold and 90th percentile for the whole BMAP.

- Rank 0:** Station average below BMAP threshold.
- Rank 1:** Station average above threshold but below 90th percentile.
- Rank 2:** Station average above 90th percentile.

Standard Deviation (SD) Rank

Compare to overall BMAP SD.

- Rank 0:** Station average below BMAP average + 0.5 SD.
- Rank 1:** Station average at or above average + 0.5 SD but less than BMAP average + 1 SD.
- Rank 2:** Station average at or above BMAP average + 1 SD.

Frequency Rank

Compare to BMAP Threshold.

- Rank 0:** Station percent exceedance below 5% of samples.
- Rank 1:** Station exceedances between 5% and 49% of samples.
- Rank 2:** Station exceedances over 50% of samples.

Indian River Lagoon BMAP Annual Meeting

April 25, 2024

Yesenia Escribano

Florida Department of Agriculture and Consumer Services

Office of Agricultural Water Policy

Florida Department of Agriculture and Consumer Services

Overview

- Office of Agricultural Water Policy (OAWP) Staff and Responsibilities
- Agricultural Best Management Practices (BMP)
- BMP Manual Update
- Enrollments within the Indian River Lagoon Basin
 - Unenrolled Agricultural Lands Classification
- Mail Out Efforts
- BMP Implementation Verification (IVs)
- BMP Enrollment Viewer Web App
- Legislative Report

Office of Agricultural Water Policy (OAWP)

- **West Gregory**; Director West.Gregory@FDACS.gov
- **J.P. Fraites**; Asst. Director John.Fraites@FDACS.gov
- **Bret Prater**; Asst. Director Bret.Prater@FDACS.gov
- **Angela Chelette**; Chief of Policy Planning and Coordination
Angela.Chelette@FDACS.gov
- **Steve Smith**; Chief of Field Services Steve.Smith@FDACS.gov

OAWP Staff

- **Yesenia Escribano;** Environmental Administrator - BMAPs
Yesenia.Escribano@fdacs.gov
- **Raulie Raulerson;** Environmental Administrator - Field Services
Raulie.Raulerson@fdacs.gov
- **Stacey Simmons;** Environmental Manager - Field Services
Stacey.Simmons@fdacs.gov

OAWP Responsibilities

- **Section 403.067, F.S.**
 - Outlines coordination with FDACS on the development of TMDLs and BMAPs
 - Provides for development and adoption of Best Management Practices (BMPs) by FDACS as a tool to meet agricultural pollutant load allocations in BMAPs
- **Section 373.469, F.S.**
 - Requires coordination with FDACS to identify and prioritize strategies to achieve water quality standards in the IRL watershed

OAWP Responsibilities

Development and implementation of agricultural best management practices (BMPs)

Implementation of cost share programs

Water supply and water quality planning and coordination

Scientific and technical research

Other policy development and statutory responsibilities

Binding determinations

Benefits of Agricultural Best Management Practices

Management strategies, tools and practices that improve water quality, conserve water, and protect water resources (Efficiency)

Best available science and technology

Technical and economic feasibility (Manual)

Balance productivity with water quality improvement

Proper implementation confirmed through implementation verification (IV) site visits

BMP Manuals

Update BMP Manuals: Status

Best Management Practices (BMPs)

The producer agrees to perform the following items either checked as "In Use" or "Planned":

| Nutrient Management | | | | |
|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|---------|-----|
| Do you apply nutrients or plan to apply nutrients in any form on the operation associated with this NOI? | | Yes | No | - |
| | | In Use | Planned | N/A |
| 1.1 | Right Source | | | |
|  | 1 If using commercial fertilizer (including Class AA biosolids), identify and document the nitrogen (N), phosphorus (P), and potassium (K) concentrations using the guaranteed analysis or product label information prior to application. | | | |
|  | 2 If using manures, poultry litter, compost, or other sources, determine and document the N, P, and K concentrations of those materials prior to application. Acceptable alternatives to laboratory analysis include supplier analysis, NRCS guidelines or values established in scientific literature. | | | |
|  | 3 If using <u>Class A</u> or Class B biosolids, account for the nutrient concentrations and follow the requirements of the FDEP permit. | | | |
| 1.2 | Right Rate | | | |
| | Right Rate | | | |
| | requirements of the FDEP permit the nutrient concentrations and follow the | | | |
| | If using <u>Class A</u> or Class B biosolids, account for | | | |
| | or values established in scientific literature | | | |
| | supplier analysis, NRCS guidelines | | | |

Producer Options in BMAP Areas

1. Sign a Notice of Intent (NOI) and properly implement applicable BMPs for presumption of compliance, OR
2. Follow an FDEP or WMD-prescribed water quality monitoring plan at a producer's expense

Enrollments within the Indian River Lagoon BMAP

| BMAP | Project Zone | Total Ag Acres | Enrolled Ag Acres | % Enrolled | Irrigated Acres | Enrolled Irrigated Acres | % Enrolled Irrigated |
|---------|--------------|----------------|-------------------|------------|-----------------|--------------------------|----------------------|

Compliance Assistance
Re: Registration of best management
practices
FDACS #«Owner_ID»

Dear Landowner:

You are receiving this letter because you own lands classified as agricultural within the Indian River Lagoon (IRL) Basin Management Action Plan (BMAP) area that includes the Central IRL, North IRL, and Banana River Lagoon BMAPs. The Florida Department of Environmental Protection (FDEP) developed these BMAPs to address the impacts to water quality related to excess nutrients from urban and agricultural sources located within the watershed.

Your agricultural operation can help address the water quality issues in the BMAPs by enrolling in and implementing agricultural best management practices (BMPs). State law (Section 403.067(7), F.S.) requires agricultural producers and landowners within a BMAP area to either:

- Enroll in the best management practices (BMPs) program adopted by the Florida Department of Agriculture and Consumer Services (FDACS) and implement all applicable BMPs, or
- Monitor their water quality as prescribed by FDEP to demonstrate compliance with state water quality standards. The cost associated with monitoring can be significant and the producer will be responsible for any expenses associated with sampling and testing.

Agricultural best management practices (BMPs) are practical, cost-effective actions that agricultural landowners can take to conserve water and reduce the amount of nutrients (fertilizers and animal waste) and other pollutants entering water resources. BMPs are designed to balance water resource needs with agricultural production. Please recognize that the FDACS BMP program is different from the National Resource Conservation Service's programs and requires a separate enrollment. An FDACS representative will assist you in the identification of applicable BMPs for your property or operation and enrollment in the BMP Program.

Rule 5M-1.009(3), F.A.C. requires FDACS to notify FDEP of landowners and producers who are not enrolled in a FDACS BMP Program. Failure to take action to bring the property into compliance with Florida law may result in civil action with significant financial penalties assessed by FDEP. Enrollment in and implementation of the FDACS BMP Program provides a presumption of compliance with state water quality standards and release from the provisions of Section 376.307(5), F.S., (fines for damages) for pollutants addressed by the BMPs.

COMMISSIONER WILTON SIMPSON

FDACS has contracted with the firm, Carr, Riggs & Ingram, LLC (CRI) to assist you in bringing your property into compliance with state law. Please respond in writing by April 30, 2024, through one of the following means:

- Return the enclosed information sheet in the envelope provided with the appropriate information filled in, or,
- Complete the information sheet, scan it, and email it to CRI staff at TLH-FDACS@cricpa.com.

If you have any questions or concerns, please reach out to a CRI staff person at (850) 201-5844.

Sincerely,

West Gregory

Questions and Answers (Q&A)

St. Johns River Water Management District (SJRWMD) Updates

Q: Lewis asked if the records of salinity go back 10 years to look at freshwater additions to the lagoon. He also asked what we see in the salinity.

A: Yes. This was addressed in the presentation.

Q: Leesa Souto asked if the statistical test used for the trend analysis was the Seasonal Mann Kendall or regular Mann Kendall.

A: It was a regular Mann Kendall test, not the Seasonal Mann Kendall test.

Q: Jon Perry asked what the units on the seagrass bar charts are.

A: The mean seagrass cover charts had a Y-axis in units of percent cover. The seagrass extent charts had a Y-axis in units of hectares.

Q: Lewis Kontnik asked if he could have copies of the seagrass graphs.

A: DEP suggested requesting the seagrass charts from Stacy Cecil (slcecil@sjrwmd.com) or Lauren Hall (lhall@sjrwmd.com).

Q: Lewis Kontnik asked if there are any ideas for the reasons for the increases and the declines in seagrass. We are doing a lot in the North IRL to reduce nutrients, what is going on in the south?

A: It may not be a loss of seagrass, but there may be a loss of canopy species that the maps can see very well rather than an overall loss.

Q: Donovan Morrell asked what a potential reason for the sudden decline is.

A: Tiffany Busby provided a link to a paper that describes the recent changes in seagrass extent, written by experts from SJRWMD and other IRL scientists:

<https://www.frontiersin.org/articles/10.3389/fmars.2021.789818/full>.

Statewide Annual Report (STAR)

Q: Michael Myjak asked if the slides will be made available after the presentation.

A: The slides from today will be posted online. In about a week to 10 days, a GovDelivery notice will be sent with the link to the location where the slides and meeting summary are posted.

Q: Lewis Kontnik asked why the STAR portal is closed now.

A: The STAR portal closes annually to allow DEP to finalize numbers prior to publication of the STAR report. Entities can still view their projects but cannot make updates during that time.

Progress

Q: Lewis Kontnik asked what the basis of the projected reductions are and how do we understand what will happen in the future.

A: If the projected line is flat, we just do not have enough estimated reductions from the planned and underway projects. As we work toward the BMAP update, we'll be working to gather further projects from stakeholders.

Q: Maureen Rupe asked are nitrogen and phosphorus project measurements actual or assumed based on what those completed projects should have removed.

A: There is a mix of project calculation approaches. Some project types require actual monitoring data and some use literature values. When DEP shows the reductions, those are only completed projects with reductions that are verified by DEP.

Q: Jon Perry asked if arithmetic or geometric means were used for hotspot analysis.

A: For the average rank, DEP used the arithmetic mean, but also looked closely at the data, including outliers. They also look at several components for the rank including standard deviation, frequency, and percentile.

Q: Nikki Dix asked what the "BMAP overall average" means.

A: The BMAP overall average is the concentration overall for the whole BMAP.

Q: Lewis Kontnik asked what percentage of actual measured values are used for project reductions and how many project reductions are calculated based on literature.

A: The method for project reduction estimates varies. Wastewater projects are based on measured data. For urban stormwater projects and agricultural BMPs, those reductions are more likely to be based on literature values but are sometimes measured. Some efforts like street sweeping are based on the measured materials collected, but the nutrient content is based on studies. DEP efficiencies tend to be conservative so that we are not overestimating the benefits of projects.

Q: Nikki Dix asked are the hotspots by BMAP or region.

A: The examples shown are the BMAP area for each of the three BMAPs. We have also started looking at hotspots based on the project zone.

Q: Robert Potts asked if the seagrass depth target is met, do entities still have to meet the milestone targets for the BMAP. He also asked if the information on two-step compliance for each BMAP for sea grass depth targets would be made available.

A: Diana Turner stated she believes entities would still have to meet the milestone targets based on the language in recent statutes.

Q: Kate Helms asked what happens if an entity does not meet its allocation even if the overall goals are met.

A: Entities are responsible for achieving their required reductions and should plan and implement projects to meet their assignments and milestones regardless of whether the overall goals are met. It is important to understand that the overall goals will only be considered to be met if the IRL meets its goals consistently in a variety of conditions, and not based on a year or two of meeting the target. IRL restoration must be a long term effort and demonstrate a long term recovery to be considered a success.

Q: Daryll Joyner asked if participants should be all the questions that the organizers are relaying or only the ones that staff reply to.

A: Only staff can see all of the questions in the GoTo Webinar format. Questions that are not to clarify content specifically covered during the presentation are not being addressed today and will be included in the meeting summary.

Q: Virginia Barker asked, for hot spots, does DEP think that the same numeric nutrient criterion (NNC) is representative of healthy conditions throughout the lagoon and if historic data to support that assumption is available.

A: The hot spot analysis was used as a screening method to identify areas for further investigation or project prioritization. To simplify the analysis, a single nutrient concentration was used across the IRL, but it is very likely that some areas are more sensitive to high nutrient concentrations than others. As such, the hot spot analysis is not designed to be definitive on whether areas are too high (or acceptable) in average concentrations but as a tool to look further into areas that appear to have higher concentrations.

Comment: Carolina Alvarez suggested that the hot spot ranking be added to the legend.

Upcoming BMAP Update

No questions were asked during this section.

Florida Department of Agriculture and Consumer Services (FDACS) Updates

Q: Daryll Joyner asked what the percent reduction in nutrient loading DEP assigns to implementation of the various agricultural best management practices (BMPs).

A: There are many efficiencies associated with various agricultural BMPs. There are owner-implemented BMPs and a lot of cost-share BMPs that have a variety of efficiency rates.

Q: Virginia Barker asked if FDACS is concerned about Class AA biosolids being applied but not reported.

A: Class AA biosolids are marketed to the public, labeled with a guaranteed analysis, and not tracked as biosolids. FDACS is tracking the application of Class AA biosolids (which are considered to be commercial fertilizer) through the nutrient application record form (NARF).

The current adopted BMAPs require that if a producer is using composted manure or biosolids, they must determine the nutrient concentrations before using them, and adjust fertilization rates accordingly. Producers report this in the NARF as pounds over acres applied.

During implementation verification site visits during which NARF information is collected, OAWP field staff review fertilizer application records and the fertilizer guaranteed analysis to determine proper application.

Q: Virginia Barker noted Class A and B are reported, but AA is not tracked as biosolids. Does FDACS require reporting of its nutrient content?

A: If a producer is applying Class A or B biosolids, they must follow the requirements of the FDEP permit and their site-specific nutrient management plan which requires the consideration of all plant-available N and P on site. Either Class A or Class B pathogen requirements and site restrictions must be met before biosolids may be land applied. FDACS does not track the application of Class A and B biosolids as producers are expected to follow their permit requirements within the area covered by the permit.

If there are areas in the operation on which the producer is applying any N, P, or Class AA fertilizer not covered by the permit, then OAWP field staff review fertilizer application records and the fertilizer guaranteed analysis to determine proper application. Producers report this in the NARF as pounds over acres applied.
