

#### Springs Coast (Crystal River/ Kings Bay, Homosassa and Chassahowitzka Springs Groups, and Weeki Wachee) Basin Management Action Plan Updates

#### May 30, 2024 at 10:00 AM EDT

Via Webinar Webinar Registration Link: https://register.gotowebinar.com/register/7396208450682664285

#### Agenda

- Springs Coast Basin Management Action Plan (BMAP) Overview.
- Nitrogen Source Inventory Loading Tool (NSILT) Results.
- Spring Vent Load Analysis Results.
- Next Steps BMAP Updates.

Please note the FTP site for documents pertaining to the various BMAPs: publicfiles.dep.state.fl.us - /DEAR/BMAP/Outstanding Florida Springs BMAPs/

For more information on the Crystal River/Kings Bay, Homosassa and Chassahowitzka Springs Groups, and Weeki Wachee BMAPs, contact: Chandler Keenan at (850) 245-8555 <u>Chandler.B.Keenan@FloridaDEP.gov</u>.

# WEBINAR HOUSEKEEPING

#### **Attendee Participation**

Open your control panel.

Join audio:

- Choose **Phone Call** and dial using the information provided.
- Or choose **Computer Audio** to use your computer's speakers for audio.
- Attendee audio will be muted.

Submit questions and comments via the Questions panel. If you would like to unmute and ask your questions, please specify that in the Questions Panel.

If viewing this webinar as a group, please provide a list of attendees via the Questions panel.

**Note:** Today's presentation is being recorded and will be provided on the FTP after the webinar.

# CRYSTAL RIVER/KINGS BAY, HOMOSASSA/CHASSAHOWITZKA SPRINGS, AND WEEKI WACHEE BASIN MANAGEMENT ACTION PLAN UPDATES

Chandler Keenan, Environmental Consultant Sam Hankinson, Professional Geologist II Water Quality Restoration Program Florida Department of Environmental Protection

GoTo Webinar | May 30, 2024

# AGENDA

- Basin Management Action Plan (BMAP) Overview.
- Nitrogen Source Inventory Loading Tool (NSILT):
  - $\circ$  Updates.
  - Draft Results.
- Spring Vent Load Analysis.
- Next Steps BMAP Updates:
  - $\circ$  Draft Allocation Approach.
  - $\circ$  Milestones.

### **BMAPs**

#### BMAPs are:

- Developed with stakeholder input.
- Adopted by The Florida Department of Environmental Protection's (DEP) Secretarial Order.
- Enforceable.
- Implemented through a phased approach.
- Reported on annually.
- Updated regularly.

One of DEP's methods for **restoring water quality** in an impaired waterbody.

# **KEY BMAP COMPONENTS**

- Total maximum daily loads (TMDLs) being addressed.
- Area addressed by the restoration plan.
- Identify sources.
- Phased implementation approach.
- Milestones.
- Projects and management strategies.
- Future growth impacts.

### **Projects to meet the TMDL:**

- Implementation timeline.
- Commitment to projects.
- Expected water quality improvement from projects and management strategies.

# Process to assess progress toward achieving the TMDL:

- Monitoring plan.
- Project reporting.
- Periodic follow-up meetings.
- Water quality analyses.

### **BMAPs** SPRINGS COAST OVERVIEW

#### Background

**Early 2000s -** Many of Florida's freshwater springs determined to be impaired for nutrients.

**2014 -** DEP adopted TMDLs for many waterbodies in Springs Coast basin.

**2016 -** Florida Legislature designated 30 Outstanding Florida Springs (OFS) to require additional protections.

**2018 -** BMAPs adopted as restoration framework to meet TMDLs.

**Today -** Working on updates to the Springs BMAPs to be adopted by 2025.

# **CRYSTAL RIVER / KINGS BAY BMAP**

- BMAP area is approximately 178,753 acres and includes OFS including Kings Bay Group (Hunter, House, Black, Idiot's Delight, and Tarpon Hole Springs).
- Impaired for the nitrate form of nitrogen and orthophosphate.
- Total maximum daily loads (TMDLs) are
  - Springs 0.23 mg/L nitrate annual average.
  - Kings Bay 0.28 mg/L nitrate annual average.
  - Springs 0.028 mg/L orthophosphate annual average.
  - Kings Bay 0.032 mg/L orthophosphate annual average.

Type of Entity	Name

# HOMOSASSA/ CHASSAOWITZKA SPRINGS BMAP

- BMAP area is approximately 340,609 acres and include OFS Homosassa and Chassahowitzka Springs Groups.
- Impaired for the nitrate form of nitrogen.
- Total maximum daily loads (TMDLs) are nitrate annual averages of 0.23 mg/L for the springs and 0.25 mg/L for the rivers.

# WEEKI WACHEE BMAP

- BMAP area is approximately 200,474 acres and includes the Weeki Wachee OFS.
- Impaired for the nitrate form of nitrogen.
- Total maximum daily loads (TMDLs) are nitrate annual averages of 0.28 mg/L for Weeki Wachee Spring, 0.23 mg/L for the Magnolia-Aripeka Spring Groups, and 0.20 mg/L for the Weeki Wachee River.

Type of Entity	Name

# CLEAN WATERWAYS ACT: TIMELINE

#### June 12, 2023

Final Order signed by the Secretary.

### July 12, 2023

Deadline for written explanation of potential exemption to be submitted to the department.

 $\checkmark$ 

### Feb. 1, 2024

Deadline for submitting draft Onsite sewage treatment and disposal system (OSTDS) remediation and/or wastewater treatment plans for the department's review.

### Aug. 1, 2024

Deadline for submitting complete OSTDS remediation and/or wastewater treatment plans to the department.

#### The nutrient BMAPs included in the Final Order require these plans.

# HOUSE BILL (HB) 1379: ENVIRONMENTAL PROTECTION

Expanded prohibitions in OFS to entire BMAP area. (section 373.811, Florida Statutes [F.S.])

- New conventional OSTDS where sewer is available.
- New domestic wastewater disposal facilities with permitted capacities of 100,000 gallons per day or more, unless they meet Advanced Waste Treatment (AWT) standards.
- New HAZMAT disposal facilities.
- Land application of Class A or B biosolids not in accordance with a DEP-approved nutrient management plan.
- New agricultural operations not implementing best management practices (BMPs), measures necessary to achieve pollution reduction levels or groundwater monitoring plans.

# 2024 DEP AGENCY BILL: HB 1557

Advances the protection of our environmental resources by:

- Enhancing protections for Florida's Coral Reef and aquatic preserves.
- Strengthening Florida's resilience planning.
- Furthering the Onsite Septic Program transfer.

#### Improving Treatment of Reclaimed Water

Ensures that reclaimed water is treated to meet AWT or a more stringent treatment standard in certain BMAP areas, while still promoting its use to eliminate surface water discharges and meet water supply challenges.

#### Expanding Wastewater Facility Plans

Supports the development of domestic wastewater treatment plans and OSTDS remediation plans within BMAP or other restoration areas by requiring facilities to provide information to the local entities developing these plans.

#### Investing in Innovative Technologies

Creates a program to expeditiously review new and innovative enhanced nutrientreducing OSTDS to reduce the nutrients entering Florida's waterways.

### **STAR** STATEWIDE ANNUAL REPORT – PROJECT REPORTING

### What is the STAR?

- Summarizes accomplishments in the BMAPs statewide.
- Reports on restoration projects and management strategies.
- Published July 1 of each year.
- Currently in the process of project updates and verification for STAR 2023.

# **PRELIMINARY STAR RESULTS FOR 2023**

DMAD	Project Count *					Verified Project
DIMAP	Planned	Ongoing	Underway	Completed	Total	Total Nitrogen
Kings Bay/ Crystal River	20	7	10	34	71	23,770 lbs./yr.
Homosassa/ Chassahowitzka	12	12	19	25	68	19,056 lbs./yr.
Weeki Wachee	18	16	11	36	81	61,083 lbs./yr.

\*As of Dec. 31, 2023

### WATER QUALITY DATA KINGS BAY NITRATE DATA

### WATER QUALITY DATA HOMOSASSA/CHASSAHOWITZKA AND WEEKI WACHEE DATA

### DATA UPLOAD WATERSHED INFORMATION NETWORK (WIN)

- Through both the WIN and Florida STORET (STOrage and RETrieval) data repositories, DEP implements Florida statutory requirements, DEP rule requirements and U.S. Environmental Protection Agency (EPA) funding requirements for management of environmental (non-regulatory) data for the state.
- Data from WIN are used by DEP for standards development, Impaired Waters Rule assessments, TMDL development, reasonable assurance plans, alternative restoration plans, BMAP development and assessment and for providing data as required to EPA and to the public.
- WIN data can be retrieved through the WIN Reports and Extracts menu at <a href="https://prodenv.dep.state.fl.us/DearWin/">https://prodenv.dep.state.fl.us/DearWin/</a>.
- Data providers to WIN and STORET include Division of Environmental Assessment and Restoration and other DEP entities, water management districts (WMDs), cities, counties, other state agencies, universities, private and volunteer organizations.
- If your entity is collecting ambient water quality data, please upload it to WIN.

# WIN COORDINATORS

WIN Coordinator	DEP District Area or Role	Phone	Email

### **BMAP UPDATES** ADOPTED BY JULY 1, 2025

•

- NSILT updates.
- Spring vent load analyses.
- Entity allocation development.
- Future growth.
- Establish five-year milestones for project implementation.
- Incorporate additional projects.
- Incorporate Clean
  Waterways Act (Senate Bill 712) requirements.
- Incorporate HB 1379
  requirements.
- Incorporate regional projects.

- Water quality data evaluation:
  - Evaluation of the monitoring network (spring vent and groundwater).
  - Water quality trend analyses.
- Evaluate further OSTDS provisions.
- Evaluate AWT or other more stringent effluent limits.
- Update the BMAP documents.

### **BMAP MEETING** PUBLIC QUESTIONS PERIOD

**Verbal Questions:** 

- We ask that questions and comments be limited to **3 minutes** so that we may hear from everyone.
- Please type in the chat if you would like to unmute yourself and ask a question or comment.

#### Written Comments:

Submit written comments concerning today's meeting to <u>BMAPProgram@FloridaDEP.gov</u>.

# **NSILT UPDATES**

### • NSILT Process.

- Methodology review for sources.
  - Atmospheric deposition (AD).
  - Wastewater treatment facilities (WWTFs).
  - OSTDS.
  - Urban turfgrass fertilizer (UTF).
  - Sports turfgrass fertilizer (STF).
  - Farm fertilizer (FF).
  - Livestock waste (LW).
  - $\circ$  Biosolids.
- Draft results.

# **NSILT GENERAL PROCESS SUMMARY**

Estimate loading to land surface for each source category. Apply a source specific, literature derived biochemical attenuation factor to surface loading estimate.

Apply a location specific recharge factor to surface loading estimate.

### LOADING TO GROUNDWATER.

# NITROGEN CYCLE AND ATTENUATION

# **RECHARGE TO GROUNDWATER**

- Divided into four recharge categories based on a composite recharge map of the Floridan aquifer.
- The recharge amount evaluates the percent of nitrogen loading that is expected to impact spring vent after bioattenuation is considered. Recharge rates are summarized in the table below for each recharge category.
- Delineation of recharge areas and associated recharge rates are consistent with the previous NSILT report.
- Recharge factors are applied to estimate loading for all source categories based on location of deposition.

Recharge to Groundwater				
Category	Rate			
High	90%			
Medium	50%			
Low	10%			
Discharge	0%			

# **RECHARGE TO GROUNDWATER**

AD

- AD estimates from 2019 and 2020 were averaged to estimate annual loading in the springsheds.
- Methodology is consistent with previous NSILT.

Springshed	Estimated Load to Surface (Ibs-N/yr)	Estimated Load to Groundwater (Ibs-N/yr)
Kings Bay	814,302	69,099
Homosassa	920,811	70,808
Chassahowitzka	545,574	43,944
Weeki Wachee	1,147,400	93,069

### AD

Kings Bay/Crystal River

#### Homosassa/Chassaowitzka Springs

#### Weeki Wachee

# **WWTFs**

- Wastewater Facility Regulation information was reviewed to determine the location of all WWTFs, as well as their effluent application or disposal sites.
- Discharge monitoring report data collected by Wastewater Facility Regulation from 2019 to 2021 were reviewed to determine effluent discharge volume and total nitrogen (TN) concentration for each disposal stream.
- Effluent disposal sites evaluated include reuse, disposal in a rapid infiltration basin, sprayfield, absorption field or wetland. Each method has its own estimated attenuation factor.

Wastewater Treatment Effluent Attenuation				
Reuse RIB Sprayfield Absorption Field Wetland				
75% 25% 60% 50% 85%

# **WWTFs**

- For the entire Springs Coast region, 84 domestic wastewater facilities and discharge sites were evaluated to determine contributions to groundwater loading.
- Rapid infiltration basin and sprayfield applications are the most common disposal method across BMAP areas.
- The results of the NSILT analysis for all WWTFs and disposal types in all four springsheds are presented in the table below.

Springshed	Facilities	Est. Load to Surface (Ibs-N/yr)	Est. Load to Groundwater (Ibs-N/yr)
Kings Bay	23	71,397	36,645
Homosassa	22	8,544	3,382
Chassahowitzka	8	33,617	17,972
Weeki Wachee	31	415,919	79,729

### OSTDS

- Florida Water Management Inventory data was used to estimate the number of OSTDS (updated 2021-2022).
- Parcels identified as "known septic," "likely septic," and "somewhat likely septic" were considered to have one septic system per parcel.
- Estimated load per tank is based on multiplying the average persons per household (2020 U.S. Census data) by loading per person, which is estimated to be 10 lbs/yr (Armstrong 2015).
- Credited enhanced nutrient reducing OSTDS with a 50% reduction in TN loading from the existing condition.
- Loading from OSTDS is estimated to attenuate at 30%.

### OSTDS

Kings Bay/ Crystal River

#### Homosassa/ Chassaowitzka Springs

#### Weeki Wachee

\*Density is per 300-meter by 300-meter grid cell.

OSTDS

The results of the NSILT analysis for OSTDS in all four springsheds are presented in the table below.

Springshed	Number of OSTDS	Number of enhanced OSTDS	Est. Load to Drain Fields (Ibs-N/yr)	Est. Load to Groundwater (Ibs-N/yr)
Kings Bay	30,256	638	673,211	413,555
Homosassa	16,947	56	364,522	215,178
Chassahowitzka	5,598	199	132,376	81,452
Weeki Wachee	44,726	1,114	1,048,663	641,621

# UTF

- UTF loading was evaluated separately for single family residential, non-single family residential and sports turfgrass.
- Sports turfgrass loading includes the application of fertilizers to both sports fields and golf courses.
- Loading from UTFs are estimated to attenuate at 70%.

Source: Pexels

### Single Family Residential Fertilization:

- 2021 Florida Department of Revenue Cadastral information was used to determine size and value of single-family residential parcels.
- Assumed 27.8% of parcel as impervious area (Tilley & Slonecker, 2006).
- Assumed 1 acre maximum for fertilized area for single family residential parcels greater than 1 acres in these springsheds.
- Assumed likelihood to fertilize rate is based on home value. Three tiers of home value considered.
- Fertilizer application rates are informed by local survey information and the Green Industries Best Management Practice (GIBMP) manual.

Lawn Care Source				
Service 32%				
Self	68%			

Self Application Rates	Percent	Application Rate (lbs/N/ac/applications)	Number of Applications
BMP	15%	26.136	5.00
Label	74%	34.78	2.98
None	11%	0.00	0.00

The results of the NSILT analysis for Single Family Residential UTF in all four springsheds are presented in the table below.

Springshed	Est. Load to Surface (Ibs-N/yr)	Est. Load to Groundwater (Ibs-N/yr)
Kings Bay	642,269	168,375
Homosassa	309,218	78,814
Chassahowitzka	177,242	46,716
Weeki Wachee	866,028	222,374

### UTF NON-SINGLE FAMILY RESIDENTIAL

- WMD land use/land cover data was used to estimate nonsingle family residential UTF application acreage estimates.
- Land use data year is dependent on the WMD with all data updated between 2019 and 2022.
- Fifteen land cover codes were assumed to be likely to receive fertilizer.

		Percent of Pervious area
WMD Land Cover Code	Percent Impervious	<b>Receiving Fertilizer</b>
1220: Medium Density, Mobile Home Units	32.6%	17.7%
1230: Medium Density, Mixed Units (Fixed and Mobile Home Units)	32.6%	15.4%
1320: High Density, Mobile Home Units	44.4%	20.7%
1330: Multiple Dwelling Units, Low Rise	44.4%	27.8%
1340: High Density, Multiple Dwelling Units, High Rise (Four Stories or More)	44.4%	32.8%
1400: Commercial and Services	72.2%	31.3%
1411: Shopping Centers	72.2%	31.3%
1480: Cemeteries	8.3%	42.2%
1700: Institutional	34.4%	43.3%
1710: Educational	30.3%	60.6%
1720: Religious	39.9%	37.7%
1740: Medical and Health Care	72.2%	33.8%
1750: Governmental	35.4%	41.0%
1850: Parks and Zoos	12.5%	44.9%
1860: Community Recreational Facilities	12.5%	59.8%

- Impervious area was estimated using a United States Geological Survey study (Tilley & Slonecker, 2006). Percent impervious area was dependent on the land use category.
- The area of pervious surface expected to receive fertilizer was evaluated by local land cover data. The
  percentage of pervious area evaluated to be bare ground or grass surface was applied to the
  estimated pervious areas of the 15 land cover codes to then estimate the area expected to receive
  fertilization.

### UTF NON-SINGLE FAMILY RESIDENTIAL

- Estimated fertilizer application rates for non-single family residential fertilized areas were based on an evaluation of the GIBMP Manual.
- It is estimated that fertilizer is applied at a rate of 3 lb-N/1,000 ft<sup>2</sup> to fertilized turfgrass in the region.
- The results of the NSILT analysis for non-single family residential UTF in all four springsheds are presented in the table below.

Springshed	Est. Load to Surface (Ibs-N/yr)	Est. Load to Groundwater (Ibs-N/yr)
Kings Bay	53,212	13,042
Homosassa	33,444	8,143
Chassahowitzka	20,110	5,237
Weeki Wachee	68,165	17,686

STF

STF is a combination of golf course and other sports turfgrass areas:

- Previous NSILT estimates of other STF areas were used in this evaluation to estimate loading from this source.
- Fertilizer application rates and area from the previous NSILT were used to estimate current nutrient loading where information was available.

Thirty-one golf courses operating within the springsheds were reviewed.

• Where site specific data was not available, golf course application rates were updated based on a study of regional golf course practices published by HortTechnology (Shaddox, et al., 2023).

Chassahowitzka	99	4	100,152	25,178
Weeki Wachee	88	14	154,907	41,825

- Florida Statewide Agricultural Irrigation Demand 9 (FSAID 9) data layer published in 2021 was analyzed to estimate acreage of all crop types within each recharge category.
- Application rates previously used in the NSILT were reviewed by the Florida Department of Agriculture and Consumer Services, WMDs, and University of Florida Institute of Food and Agricultural Science

- For all crops besides pasture and nurseries, loading to land surface was calculated by multiplying the acreage of a given crop type by the estimated fertilizer application rate.
- Loading from FF is estimated to attenuate at 80%.

### FF

Nursery Crops	Fertilizer Application Rate (lb-N/acre)	Effective Application Rate (lb-N/acre)

Pasture	50	10

- For nurseries that use containers:
  - A reduction of 20% of the FSAID 9 land area was made to account for plant spacing.
  - A reduction of 70% of loading was estimated to account fertilizer being applied to containers that hold the nutrients longer.
- Adjustment to fertilizer application rates were made to pastureland that utilize field rotation.
  - Fertilizer was estimated to be applied to 20% of pasturelands annually.

- LW
- Livestock populations were estimated using 2017 U.S. Department of Agriculture (USDA) census of agriculture data. USDA population estimates are provided by county.
- FSAID 9 land use was used to evaluate the proportion of livestock land within a BMAP and adjust USDA population estimates.
- Waste factors were multiplied by the estimated animal population to calculate LW loading.
- Loading from LW is estimated to attenuate at 90%.

Livestock Type	Waste Factor (lb-N/day)
Beef Cattle	0.337
"Other" Cattle	0.31
Calves	0.068
Dairy Cows	0.977
Donkeys	0.1

# DAIRIES

- Non-Confined Animal Feeding Operation dairy information was provided by Florida Department of Agriculture and Consumer Services, including information on herd size, waste handling practices and animal confinement.
- If a dairy herd was identified as grazed, it was estimated that they would be confined for 15% of the time to account for time in the milking parlors.
- A waste factor of 0.36 lb-N/day for dairy cows and 0.15 lb-N/day for nonmilking cows was assumed.
- Annual loading was estimated by multiplying the number of cows by the daily waste factor multiplied by 365 days per year multiplied by application loss coefficients based on waste handling practices.
- Dairy waste was estimated to attenuate at 50% for the BMAP.

The results of the NSILT analysis for livestock waste in all four springsheds are presented in the table below.

Springshed	Est. Load to Surface (Ibs-N/yr)	Est. Load to Groundwater (Ibs-N/yr)
Kings Bay	368,278	32,668
Homosassa	642,973	81,944
Chassahowitzka	755,071	66,674
Weeki Wachee	1,827,226	139,175

# BIOSOLIDS

- Biosolids application quantity estimates were derived from calculating the average application quantity reported from 2018 to 2022, where data was available.
- Application quantities are provided in tons of material, it was assumed biosolid material has an estimated nitrogen content of approximately 5%.
- Loading to land surface was calculated by multiplying the average application quantity for the period of record by the estimated nitrogen content of 5%.
- Loading from biosolids is estimated to attenuate at 50%.

### **BMAP UPDATES** SPRING VENT LOAD ANALYSIS

Calculated the current loading using the most recent 10 years of nitrate and discharge data. Calculated the percent reduction using the TMDL and current loading. Applied the spring vent percent reduction to the updated NSILT loading.

Estimate the total reduction needed to meet the TMDL.

### **BMAP UPDATES** SPRING VENT LOAD ANALYSIS

Upper 95% confidence interval - nitrate data from 2012 to 2022.

<sup>1</sup> TMDL target is 0.23 mg/L

<sup>2</sup> TMDL target is 0.28 mg/L

## **BMAP UPDATES** ALLOCATION AND REDUCTION APPROACH

- The percent reduction calculated from the spring vent analysis is applied to the estimated NSILT load to determine the overall required reduction needed in the basin.
- Each source will be evaluated for a reduction strategy.
- Responsible entities will receive an allocation based on the combined necessary reductions estimated by source for their area based on the NSILT loading.

## **BMAP UPDATES** ALLOCATION AND REDUCTION APPROACH

### OSTDS

 Reduction strategy based on BMAP OSTDS requirements in Appendix D, with additional reductions based on actual loading from OSTDS.

### WWTFs

 Reduction strategy is based on BMAP effluent requirements in the BMAP document and requirements in Florida law established 2021-2024.

#### Agriculture

- · Reduction strategy based on:
  - BMP enrollment using a 15% reduction applied to FF load to groundwater.
  - BMP enrollment using a 10% reduction applied to (LW and dairies.
  - Any remaining agricultural reductions will be allocated to agricultural cooperative elements, which could include regional projects, cost-share practices and innovative technologies.

#### AD

 Anticipate reductions to be addressed by reductions from other sources and regional projects.

## **BMAP UPDATES** ALLOCATION AND REDUCTION APPROACH

#### UTF

• Apply the spring vent percent reduction to the total UTF load to groundwater and allocate to the applicable local governments.

#### STF

• Apply the spring vent percent reduction to the STF load to groundwater and allocate to the applicable governments.

#### **Golf Courses**

 Reduction based on requirement of all golf courses to submit information on implementation of BMPs and a nutrient management plan to address the nutrient loading.

### **BMAP UPDATES** FUTURE GROWTH

- Domestic Wastewater Projections:
  - Use wastewater to estimate future growth projections.
  - Start with population growth for each county from Bureau of Economic and Business Research:
    - $\circ~$  2040 Medium Growth Projections.
  - Proportion growth for each entity based on land area.
  - Distinguish the future population expected to be served by sewer versus those with OSTDS based on the most recent Florida Water Management Inventory for each BMAP county.
  - Use per person calculations to estimate future loads from WWTF and OSTDS.

### • Agriculture Projections:

• Exploring different tools to estimate future changes in agricultural acreage in the BMAPs to estimate changes in agricultural loading.

### **BMAP UPDATES** 5-, 10-, AND 15-YEAR MILESTONES/REDUCTION SCHEDULE

#### Florida Department of Environmental Protection (DEP) Crystal River/ Kings Bay, Homosassa/ Chassahowitzka Springs Group, and Weeki Wachee Basin Management Action Plans (BMAPs) Question and Answer (Q&A) Summary Public Meeting on May 30, 2024 10:00 am – 11:28 am Via GoToWebinar

#### **Attendance List**

Lisa Bally, ATM Bob Bates, APTIM Evelyn Becerra, DEP Vivianna Bendixson, SWFWMD Juanita Bernal, Pasco County Allan Biddlecomb, Pasco County Marcelo Blanco, DEP Beth Brady, Save the Manatee Alys Brockway, Hernando County Carla Burrmann, Hernando County Tiffany Busby, Wildwood Consulting Stacy Cecil, SJRWMD Mitchell Chauncey, Ardurra Ken Cheek, Citrus County Carolin Ciarlariello, DEP Amber Connolly, FDOH Kristina Deak, SWFWMD Chloe Dougherty, Florida Springs Council Burton Eno, Citizen Yesenia Escribano, FDACS Amanda Exposito-Ferree, AtkinsRealis Trevor Fagan, SWFWMD Suzannah Folsom, WRWSA Grant Furnas, WBQ Design & Engineering Diane Garte, Citizen Tina Gordon, Wildwood Consulting Trisha Green, DEP Roxanne Groover, FOWA Justin Grubich, Pew Charitable Trusts Sam Hankinson, DEP David Herman, WBQ Design & Engineering Gabe Herrick, SWFWMD Ray Hodge, United Dairy Farmers of Florida

Nathan Jagoda, DEP Tony Janicki, ESA Wei Jin, SJRWMD Marie E Johnson Nall, Citizen Andrew Jorgensen, On Top of the World Daryll Joyner, ESA Chandler Keenan, DEP Eugene Kelly, Citizen Adriana Kirwan, FDOT Cierra Kuchar, DEP Charles Legros, DEP Liz Lindsay, Florida Right to Clean Water Celeste Lyon, RES Ken Maguire, FDOH Dianne Maughan, Citizen Max McAmis, Pasco County Michael McGrath, Sierra Club Matt McKinney, Duke Energy Micah Minaberry, Pasco County Stephen Moeller, RioVation Charles Morton, Citizen Jessica Mostyn, DEP Ken Nash, Citizen Ryne Nimmo, DEP Sky Notestein, Wetland Solutions Jackie Noval, DEP Gordon Onderdonk, Hernando County Robin Orlandi, Citizen Ron Patel, Hernando County Cisco Pavez, Pasco County Benjamin Pernezny, Ardurra Ray Pribble, ESA Joseph Quinn, SWFWMD Deevon Quirolo, Citizen

Derek Reiners, FGCU Brad Rimbey, Citizen Patricia Robertshaw, SWFWMD Michelle Sempsrott, FWC James Shannon, Pasco County Ryan Smart, Florida Springs Council Tom St. Clair, Citizen Victoria Steinnecker, Corollo Engineers Jennifer Thera, FDACS Haley Thomas, WBQ Design & Engineering Scott Towler, Anser Advisory Madison Trowbridge, SWFWMD Diana Turner, DEP Unknown, The Florida Channel Lisa Van Houdt, DEP Barry Vance, Water & Air Research Devon Villareal, SWFWMD Coleen Weaver, Pasco County Ken Weaver, DEP Stefani Weeks, Citizen Tanya Welborn, DEP Brenda Wells, Florida Springs Council Scott Wesson, AtkinsRealis Andrea Wilcock, FDOH Catherine Wolden, SWFWMD Erin Yao, FDOT Rachel Zinck, Citizen

### Crystal River/Kings Bay, Homosassa/Chassahowitzka, and Weeki Wachee BMAP Overview

Q: Will future meetings be in person or virtual?

A: There will be one in-person meeting in the basins. The other meetings will likely be virtual.

### Nitrogen Source Inventory Loading Tool (NSILT) Results

Q: Can you elaborate upon what 30% attenuation means for onsite sewage treatment and disposal systems (OSTDS)?

A: Attenuation happens when nitrogen loading is up taken through surface and subsurface processes. Florida-based studies indicate that about 30% of nitrogen is attenuated from OSTDS.

Q: Did you evaluate urban turfgrass fertilizer (UTF) with considerations of the local fertilizer ordinances in place?

A: Yes, fertilizer ordinances were taken into consideration when we did the evaluations. Our estimates of fertilizer applications were reduced proportionally based on the provisions of the local fertilizer ordinances.

Q: Does atmospheric deposition data include stack exhaust contaminants from coal/gas burning power units at the Duke Energy facility in the Kings Bay/Crystal River BMAP area? A: Our group used data from but did not perform the Total Deposition Science Committee (tDEP) model. The model is performed by the National Atmospheric Deposition Program (NADP); details on the data used would need to be directed there. Presumably, the model would estimate regional deposition rates, not necessarily individual sources, based on their network of air quality monitoring stations. Q: How was it determined attenuation for agriculture sources is 80%?

A: The attenuation rate was determined through a literature review of what attenuation rates have been observed. The livestock waste attenuation rate is a bit higher since it is an organic source and would likely remain in the soil longer. The attenuation rates for these sources are the same as those used in the prior NSILT.

Q: Was there accounting for stormwater runoff from roads and impervious areas? A: Stormwater is not a source in itself, it comes from sources such as fertilizer on urban turfgrass, atmospheric deposition, and other loading sources.

Q: Does DEP plan to make any additional updates in the coming year to account for recent changes in wastewater treatment facility (WWTF) loads?

A: There are no plans to update the NSILTs again in the coming year. The period of record will be established by this NSILT update for the 2025 BMAP updates.

### Spring Vent Load Analysis Results

Q: Does DEP check for decreasing trends before calculating the current loads? Ten years is a long time, even for groundwater.

A: We are always looking at the updated spring vent numbers. The ten-year period of record was selected to account for variability in the data and is in line with the NSILT period of record.

Q: Can you define "stakeholders"?

A: Responsible entities within the BMAPs include local governments, agricultural producers, and WWTFs, among others. The outreach to individual agricultural producers is handled by the Florida Department of Agriculture and Consumer Services (FDACS).

Q: What are the expectations for the first 5-year milestone?

A: Entities will need to have projects identified or in the preliminary phases to demonstrate that they can meet the first milestone (30% of the reductions needed).

### Next Steps - BMAP Updates

There were no questions for this section.

### **Public Comment**

• It sounded that the requirement will be to have a project planned or conceived to meet the first milestone. Will those projects be required to be completed within five years and will the BMAP not be adopted until they are set up? DEP responded that they will be working on the project lists with responsible stakeholders. This question goes into details that DEP will be discussing in the upcoming meetings once we have spoken with the responsible stakeholders. Details on allocations, milestones, and projects will be addressed in the upcoming meetings. The updated NSILT loadings are also being incorporated and addressed in the revised BMAPs.

• It looks like in all of the presentations; we have set the first milestone at 30%. How did DEP come to the 30% number. Is the percentage still up for discussion? DEP responded that they are continuing with the 30% first milestone, which will be applied to each entity's allocation in each basin. The upcoming meetings will cover the responsibilities of each stakeholder. With the new legislation, responsible entities will now be required to meet their own required reductions within each of the five-year milestones, which was not entity-specific before the legislation. This will place a lot more emphasis on each responsible entity's assignment, instead of on source categories.

#### Adjournment

The meeting ended at 11:28 am.
