Introduction

Section 161.143 (5) Florida Statutes (F.S.) states: *The department shall update and maintain an annual report on its website concerning the extent to which each inlet project has succeeded in balancing the sediment budget of the inlet and adjacent beaches and in mitigating the inlet's erosive effects on adjacent beaches. The report must estimate the quantity of sediment bypassed, transferred, or otherwise placed on adjacent eroding beaches, or in such beaches' nearshore area, for the purpose of offsetting the erosive effects of inlets on the beaches of this state.*

Elements of the Report:

The order of the annual inlet report is listed by region, starting with inlets in the Northeast Atlantic Coast Region moving south along the east coast and then west to east in the Panhandle Region and then north to south along the Southwest Gulf Coast Region. One can view the table of contents to find a specific inlet. Elements of the annual inlet report include the inlet management plan's (IMP) adoption year, IMP updated year, annual bypass numbers by year, bypass objective, annualized volume, cumulative volume, cumulative objective, surplus/deficit volume and the percentage of the bypass objective met. The annual inlet report highlights the surplus and/or deficit of material that is being bypassed on an annual basis to each side of an inlet that is actively managed. The bypass objective is listed in the first table for each inlet and will state if the bypass objective is from the Strategic Beach Management Plan (SBMP). The IMP is based upon an inlet study's sediment budget that was sponsored by a local government entity, to determine how best to mitigate the erosive effects of the altered inlet in order to bypass beach quality sand to the adjacent eroded beaches. All bypass data submitted to or that is available to the department was utilized through 2021; data for some inlets may not be available at the published time of this report. Beach nourishment is another management strategy for Florida's eroded beaches and the sand volumes associated with these projects can be found in the [Strategic Beach Management Plan](#). In some cases, there are ongoing beach nourishment projects adjacent to inlets that have mitigated some or all of the inlet effects. The [Inlet Management Plans](#) can be found on the department's web page. The department and/or local governments sponsor inlet management studies and inlet reports that can be viewed or downloaded from this [OCULUS folder](#) (use the public login tab to enter site). A full listing of Florida's inlets (66) along the

Atlantic Coast and Gulf Coast can be viewed in Table's 1 through 4 of the Strategic Beach Management Plan's [Introduction](#) within the Florida Inlets section.

It should also be noted that the department recognizes the language found in Section 161.142 F.S. for this report regarding inlet sand bypassing activities and historical sand deficits caused by inlets in that *“The Legislature recognizes the need for maintaining navigation inlets to promote commercial and recreational uses of our coastal waters and their resources. The Legislature further recognizes that inlets interrupt or alter the natural drift of beach-quality sand resources, which often results in these sand resources being deposited in nearshore areas or in the inlet channel, or in the inland waterway adjacent to the inlet, instead of providing natural nourishment to the adjacent eroding beaches. Accordingly, the Legislature finds it is in the public interest to replicate the natural drift of sand which is interrupted or altered by inlets to be replaced and for each level of government to undertake all reasonable efforts to maximize inlet sand bypassing to ensure that beach-quality sand is placed on adjacent eroding beaches. **Such activities cannot make up for the historical sand deficits caused by inlets but shall be designed to balance the sediment budget of the inlet and adjacent beaches and extend the life of proximate beach-restoration projects so that periodic nourishment is needed less frequently.** Therefore, in furtherance of this declaration of public policy and the Legislature's intent to redirect and recommit the state's comprehensive beach management efforts to address the beach erosion caused by inlets,”*

The intent of Section 161.142 F.S. and the IMP strategies is to mitigate the contemporary inlet effects; not the historical effects of an inlet.

Northeast Atlantic Coast Region

Port Canaveral Inlet

Table 7: Port Canaveral Inlet Management Plan and bypass objective.

| County | Inlet | Year IMP Adopted or Updated | Annual Bypass Objective North (CY) | Annual Bypass Objective South (CY) |
|---------|----------------|-----------------------------|------------------------------------|------------------------------------|
| Brevard | Port Canaveral | 1996 | 0 | 0 |
| Brevard | Port Canaveral | 2014 | 0 | 156,000 |

*Bypass objective of 156,000 was initially established in the 2008 SBMP.

Table 8: Port Canaveral Inlet bypass summary of sand bypass volumes, since 2007.

| Bypassing Matrix | North Bypass (CY) | South Bypass (CY) |
|-----------------------------|-------------------|-------------------|
| Cumulative Volume Bypassed: | 0 | 2,891,142 |
| Cumulative Objective: | 0 | 2,184,000 |
| Annualized Volume Bypassed: | 0 | 206,510 |
| Surplus (Deficit): | 0 | 707,142 |
| Percent Objective Met: | N/A | 132.38% |

Figure 8: Port Canaveral Inlet bypass volume, annual objective, cumulative volume and cumulative objective.

Sebastian Inlet

Table 9: Sebastian Inlet Management Plan and bypass objective.

| County | Inlet | Year IMP Adopted or Updated | Annual Bypass Objective North (CY) | Annual Bypass Objective South (CY) |
|--------------|-----------|-----------------------------|------------------------------------|------------------------------------|
| Indian River | Sebastian | 2000 | 0 | 70,000 |
| Indian River | Sebastian | 2008* | 0 | 90,000 |

*2008 bypass objective was updated in Strategic Beach Management Plan (2008).

Table 10: Sebastian Inlet bypass summary of sand bypass volumes, since 2000.

| Bypassing Matrix | North Bypass (CY) | South Bypass (CY) |
|-----------------------------|-------------------|-------------------|
| Cumulative Volume Bypassed: | 0 | 1,125,045 |
| Cumulative Objective: | 0 | 1,820,000 |
| Annualized Volume Bypassed: | 0 | 51,138 |
| Surplus (Deficit): | 0 | -694,955 |
| Percent Objective Met: | N/A | 61.82% |

Figure 9: Sebastian Inlet bypass volume, annual objective, cumulative volume and cumulative objective.

Ft. Pierce Inlet

Table 11: Ft. Pierce Inlet Management Plan and bypass objective.

| County | Inlet | Year IMP Adopted or Updated | Annual Bypass Objective North (CY) | Annual Bypass Objective South (CY) |
|-----------|------------|-----------------------------|------------------------------------|------------------------------------|
| St. Lucie | Ft. Pierce | 1997 | 0 | 130,000 |

*IMP was updated in 2022 with a new bypass objective and can be viewed on the department’s web site.

Table 12: Ft. Pierce Inlet bypass summary of sand bypass volumes, since 1997.

| Bypassing Matrix | North Bypass (CY) | South Bypass (CY) |
|-----------------------------|-------------------|-------------------|
| Cumulative Volume Bypassed: | 0 | 281,126 |
| Cumulative Objective: | 0 | 3,250,000 |
| Annualized Volume Bypassed: | 0 | 11,245 |
| Surplus (Deficit): | 0 | -2,968,874 |
| Percent Objective Met: | N/A | 8.65% |

Figure 10: Ft. Pierce Inlet bypass volume, annual objective, cumulative volume and cumulative objective.

St. Lucie Inlet

Table 13: St. Lucie Inlet - Inlet Management Plan and bypass objective.

| County | Inlet | Year IMP Updated | Annual Bypass Objective North (CY) | Annual Bypass Objective South (CY) |
|--------|-------------------|------------------|------------------------------------|------------------------------------|
| Martin | St. Lucie | 1995 | 0 | 0 |
| Martin | St. Lucie-Updated | 2016 | 34,000 | 161,000 |

*Bypass objective of 185,000 cy to the south was initially established in the 2008 SBMP and then updated in 2016.

Table 14: St. Lucie Inlet - Updated IMP bypass summary of sand bypass volumes, since 2016.

| Bypassing Matrix | North Bypass (CY) | South Bypass (CY) |
|------------------------------|-------------------|-------------------|
| *Cumulative Volume Bypassed: | 306,000 | 1,031,593 |
| Cumulative Objective: | 204,000 | 966,000 |
| Annualized Volume Bypassed: | 51,000 | 171,932 |
| *Surplus (Deficit): | 102,000 | 65,593 |
| Percent Objective Met: | 150.00% | 106.79% |

*With the updated IMP in 2016, the accounting of bypassing and any surplus/deficits pre-2016 are not shown.

*The cumulative volume bypassed to the north does not include the beach nourishment volumes listed in the SBMP.

North of the inlet between years 2016 to 2021, there has been a total volume of 739,483 cy of inlet dredging at St. Lucie Inlet with placement at Bathtub Beach and Sailfish Point between R34 and R40; of which, 306,000 cy has been credited by the department as inlet bypassing. The remaining volume of 433,483 cy is credited towards beach nourishment at Bathtub Beach and Sailfish Point by the department.

South of the inlet, Martin County contributed funds to the Town of Jupiter Island's 2016 beach nourishment equivalent to 500,000 cy that was credited towards inlet bypassing. Maintenance dredging of the inlet was completed in August 2018, with placement of 512,411 cy in the designated offshore borrow area. Again in 2019, Martin County contributed funds to the Town's beach nourishment equivalent to 531,593 cy that was credited towards inlet bypassing by the department.

Venice Inlet

Table 41: Venice Inlet Management Plan and bypass objective.

| County | Inlet | Year IMP Adopted or Updated | Annual Bypass Objective North (CY) | Annual Bypass Objective South (CY) |
|----------|--------------|-----------------------------|------------------------------------|------------------------------------|
| Sarasota | Venice Inlet | 1998 | 0 | 64,620 |

Table 42: Venice Inlet bypass summary of sand bypass volumes, since 1998.

| Bypassing Matrix | North Bypass (CY) | South Bypass (CY) |
|-----------------------------|-------------------|-------------------|
| Cumulative Volume Bypassed: | 0 | 28,932 |
| Cumulative Objective: | 0 | 1,550,880 |
| Annualized Volume Bypassed: | 0 | 1,206 |
| Surplus (Deficit): | 0 | -1,521,948 |
| Percent Objective Met: | N/A | 0.02% |

Figure 30: Venice Inlet bypass volume, annual objective, cumulative volume and cumulative objective.

Stump Pass

Table 43: Stump Pass Inlet Management Plan and bypass objective.

| County | Inlet | Year IMP Adopted or Updated | Annual Bypass Objective North (CY) | Annual Bypass Objective South (CY) |
|-----------|------------|-----------------------------|------------------------------------|------------------------------------|
| Charlotte | Stump Pass | 2016 | 6,000 | 25,000 |

Table 44: Stump Pass Inlet bypass summary of sand bypass volumes, since 2016.

| Bypassing Matrix | North Bypass (CY) | South Bypass (CY) |
|-----------------------------|-------------------|-------------------|
| Cumulative Volume Bypassed: | 48,000* | 88,100 |
| Cumulative Objective: | 36,000 | 150,000 |
| Annualized Volume Bypassed: | 8,000 | 14,683 |
| Surplus (Deficit): | 12,000 | -61,900 |
| Percent Objective Met: | 133.33% | 58.73% |

*Cumulative volume is based upon nourishment interval of eight years for bypass to the north and does not include beach nourishment volume listed in the SBMP.

North of the inlet between years 2016 to 2021, there has been a total inlet dredge volume of 145,380 cy at Stump Pass with placement at Manasota Key between R18 and R21; of which, 48,000 cy has been credited towards inlet bypassing. The remainder volume (97,380 cy) is credited towards beach nourishment at Manasota Key by the department.

South of the inlet between years 2016 to 2021, there has been a total inlet dredge volume of 81,100 cy at Stump Pass with approximate placement at Knight Island/ Don Pedro Island at R22 area; of which, the entire 81,100 cy has been credited for inlet bypassing.

Figure 31: Stump Pass bypass volume, annual objective, cumulative volume and cumulative objective to the north.

New Inlet Studies and New or Updated Inlet Management Plans

The department, local governments and coastal engineering consultants continually work to conduct inlet studies that develop best management practices to bypass beach quality sand to adjacent eroding beaches with the goal of balancing the sediment budget, per the requirements of Section 161.142 F.S.

Current studies or plans that are being conducted for year 2022:

- 1.) Ft. Pierce Inlet has an updated inlet management plan in 2022.
- 2.) South Lake Worth Inlet is projected to have an updated inlet management plan in 2022.
- 3.) St. Lucie Inlet has an updated inlet sediment budget/ study in 2021/2022.
- 4.) Sebastian Inlet is currently having Technical Advisory Committee (TAC) meetings to develop an updated sediment budget and an inlet management plan.
- 5.) Estero Barriers is currently having TAC meetings to develop a final study and new inlet management plans for Big Carlos Pass, New Pass and Big Hickory Pass.
- 6.) Pensacola Pass is currently having TAC meetings to develop an inlet study and new inlet management plan.
- 7.) Passage Key Inlet is currently having TAC meetings to develop an inlet study and new inlet management plan.
- 8.) Longboat Pass, Manatee County is conducting an inlet study with an updated sediment budget.

Summary

Of the 66 inlets in the State of Florida, 43 are considered managed inlets as listed within the Strategic Beach Management Plan's Introduction. There are a total of 25 altered inlets that are listed within the Annual Inlet Report and 24 have an inlet management plan with the department. Within the second edition of the Annual Inlet Report; 11 of the 25 altered inlets are meeting their bypass objective at 100% or greater, 2 inlets are between 91% and 100%, 1 inlet is between 71% and 80%, 3 inlets are between 60% and 70%, 1 inlet is between 41% and 50%, 6 inlets are below 40% and 1 inlet is classified as not applicable (NA), see **Figure 36**. In total, 44% of the inlets are

above 100% in meeting their bypass objectives and 12% are between 71% and 100%. The Annual Inlet Report assists the department, local governments and inlet entities in tracking and providing accountability in how well inlet management activities are meeting the bypass objective listed in their respective inlet management plans.

Figure 36. Summary pie chart of the 25 altered inlets that are listed within the annual inlet report and what percentage they have met their bypass objective. **Note:** 30 inlet bypass objectives vs. 25 inlets that are listed in the report; i.e., six inlets have two bypass objectives (north and south) and one that has a monitoring based bypass objective.
