

BLUE-GREEN ALGAL BLOOM WEEKLY UPDATE

REPORTING DEC. 1 - DEC. 7, 2023

Satellite imagery provided by NOAA - Images are impacted by cloud cover.

A value of 0.004 is nominally equivalent to approximately 20-30 ug/L chlorophyll a of cyanobacteria, and 0.06 would be in the 300-500 ug/L chlorophyll a range. Please keep in mind that bloom potential is subject to change due to rapidly changing environmental conditions or satellite inconsistencies (i.e., wind, rain, temperature or stage).

SUMMARY

There were four reported site visits in the past seven days with four samples collected. Algal bloom conditions were observed by samplers at four of the sites.

On 12/4, Florida Department of Environmental Protection (DEP) staff collected a Harmful Algal Bloom (HAB) response sample at **Tiger Lake - Center**. There was no dominant algal taxon and a trace level [0.45 parts per billion (ppb)] of microcystins was detected.

On 12/7, Highlands County staff collected three HAB response samples from **Lake Placid**, **Lake June-in-Winter - Boat Ramp** and **Lake Glenada - Boat Ramp**. Results are pending.

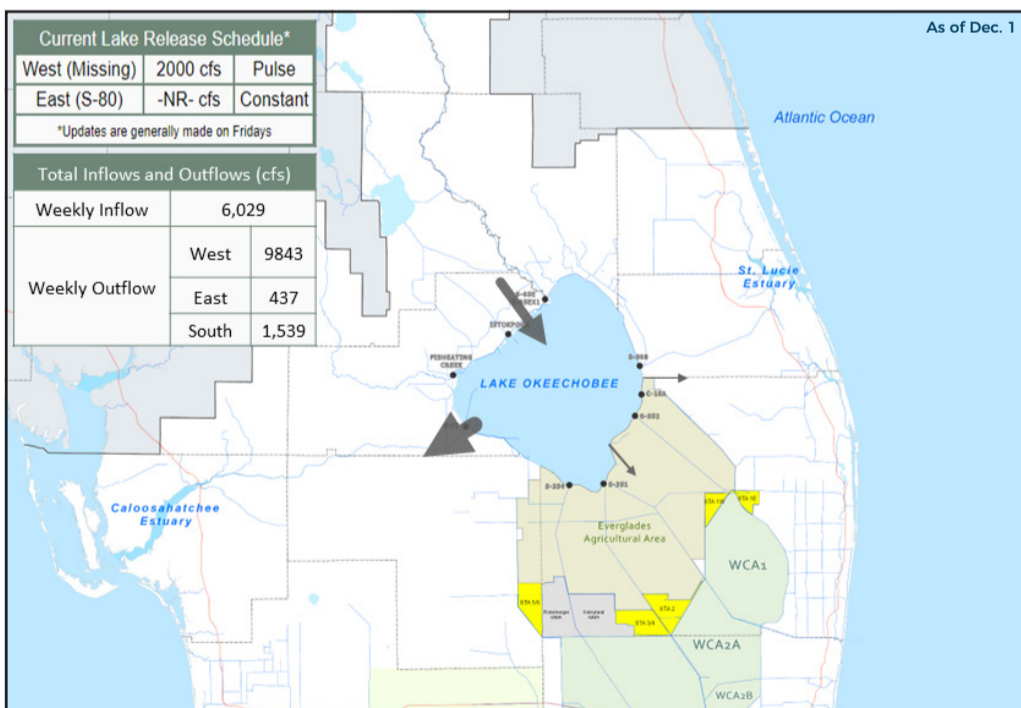

Last Week

On 11/30, St. Johns River Water Management District staff collected a routine HAB monitoring sample at **Lake Monroe - Center**. There was no dominant algal taxon and no cyanotoxins detected.

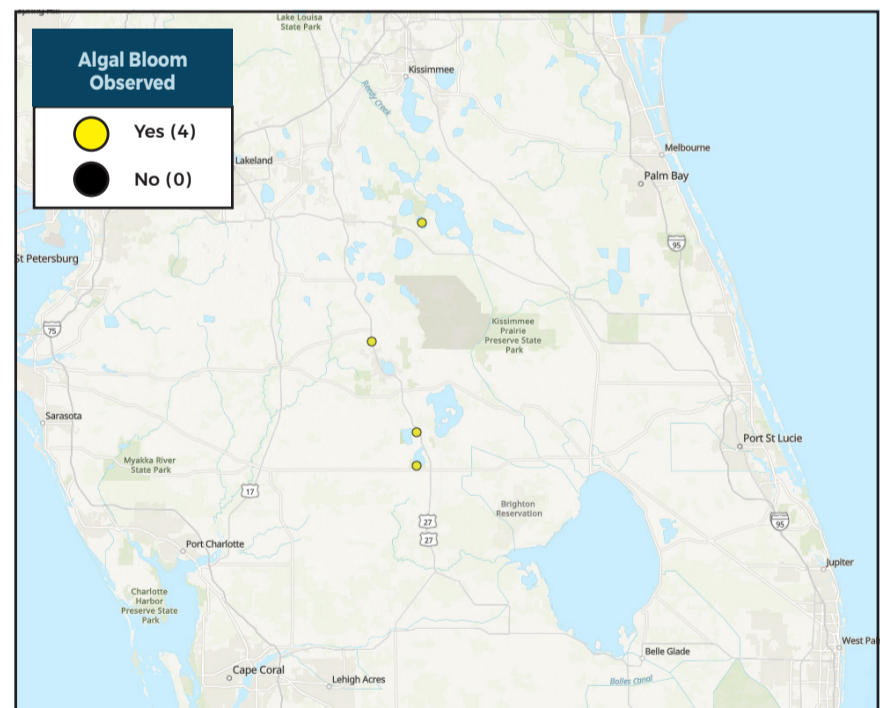

Results for completed analyses are available at FloridaDEP.gov/AlgalBloom.

This is a high-level summary of the sampling events for the reported week. For all field visit and analytical result details, please refer to the complete algal bloom map with data table by clicking the "Field and Lab Details" Quick Link from the Algal Bloom Dashboard. Different types of blue-green algal bloom species can look different and have different impacts. However, regardless of species, many types of blue-green algae can produce toxins that can make you or your pets sick if swallowed or possibly cause skin and/or eye irritation due to contact. We advise staying out of water where algae is visibly present as specks or mats or where water is discolored pea-green, blue-green or brownish-red. Additionally, pets or livestock should not come into contact with algal bloom-impacted water or with algal bloom material or fish on the shoreline.

REPORT ALGAL BLOOMS

SALTWATER BLOOM

- Observe stranded wildlife or a fish kill.
- Information about red tide and other saltwater algal blooms.

CONTACT FWC

800-636-0511 (fish kills)
888-404-3922 (wildlife Alert)
MyFWC.com/RedTide

FRESHWATER BLOOM

- Observe an algal bloom in a lake or freshwater river.
- Information about blue-green algal blooms.

CONTACT DEP

855-305-3903
(to report freshwater blooms)
