FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION
Beach Management Funding Assistance Program
Fiscal Year 2015-16 Local Government Funding Requests

INTRODUCTION

Florida is dependent on its 825 miles of sandy beaches fronting the Atlantic Ocean, Gulf of Mexico and Straits of Florida for storm protection for public infrastructure and private upland development, the enjoyment of its residents and non-resident tourists and boosting the state's economy. Critical habitat for many species, including many that are endangered and threatened, is also provided along the state's sandy shoreline. Each state dollar spent protecting Florida's beaches with widespread public access prevents the loss of \$8 in state taxes paid by out-of-state tourists and resident users of Florida's beaches (Florida Atlantic University, 2003).

Florida's beach management program, pursuant to Chapter 161, Florida Statutes (F.S.), the "Beach and Shore Preservation Act", provides for a variety of local government-sponsored erosion control activities (e.g., feasibility and design studies, construction of erosion control structures and engineered sand placement and post-construction monitoring to document project performance and potential impacts). Restoration involves the initial placement of sand to rebuild a beach that has been severely eroded. Beach nourishment, or periodic maintenance, places sand on previously restored beaches at specific intervals based on project performance in order to maintain original design intent, such as storm protection, recreational beach area and habitat enhancement. Inlet management and inlet sand bypassing is also critical to account for the disruption of sand transport along the shoreline caused by dredging and stabilization of inlets.

Pursuant to Sections 161.091, 161.101, 161.143 and 161.161, F. S., the Florida Department of Environmental Protection (DEP) is charged with developing and implementing a comprehensive, long-range statewide beach management plan. DEP has developed, in coordination with local sponsors and the United States Army Corps of Engineers (USACE), a Strategic Beach Management Plan (SBMP), Long Range Budget Plan (LRBP) and annual inventory of beach erosion control projects proposing activities for FY 2015-16. The SBMP adopts strategies for erosion control activities along critically eroded beaches and inlets. Projects must have a clearly identifiable beach management benefit consistent with the SBMP to be eligible for state funding assistance.

DEP currently designates 407.3 miles of sandy shoreline as critically eroded. Since 1998, when the Florida Legislature dedicated a portion of the Ecosystem Management and Restoration Trust Fund for beach management, \$626.6 million has been appropriated to cost-share with local governments on local and federally authorized projects, with each level of government contributing about one-third of the cost of the entire program. This has resulted in the restoration and subsequent maintenance of more than 227.8 miles, or nearly 56 percent, of the state's critically eroded beaches.

The funding requests for FY 2015-16 consist of 57 projects which total nearly \$101 million. The prioritized list of beach erosion control projects is organized in two sections: "Beach Restoration and Nourishment Projects" and "Inlet Sand Bypassing/Inlet Management Plan Implementation Projects." Each section contains a list of eligible projects ranked in priority order, based on the authority in Sections 161.101 and 161.143, F. S., and the procedures outlined in Chapter 62B-36, Florida Administrative Code. Projects have been evaluated by DEP for consistency with the SBMP, permitting status, readiness to proceed with the proposed funding phase and the appropriateness of the amount of funding requested.

BEACH RESTORATION AND NOURISHMENT PROJECTS

DEP has developed a multi-year repair and maintenance strategy to implement the state responsibilities for a comprehensive, long-range statewide program of beach erosion control, including beach restoration, nourishment and storm protection. The principles of this strategy are to:

- Maximize the infusion of beach-quality sand into the coastal system;
- Implement projects that contribute most significantly to addressing the state's beach erosion problems;
- Extend the life of beach restoration projects and reduce the frequency of nourishment;
- Encourage regional approaches to ensure the geographic coordination and sequencing of projects; and
- Reduce equipment mobilization and demobilization costs.

The funding requests for 45 Beach Restoration and Nourishment Projects (Beach Projects) for FY 2015-16 total more than \$91 million. Projects are presented in the following order:

- Post-construction monitoring list;
- Beach Restoration and Nourishment Projects; and
- Regional Monitoring.

Projects have been evaluated by DEP and ranked in priority order. The descriptions of the proposed projects are based primarily on information provided by local governments. Funding eligibility and state cost share are calculated individually for each project based on the public access, as defined by program rule, but have yet to be field verified.

A summary funding table of the beach restoration and nourishment projects, in priority order as described above, is provided herein.

FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION
Beach Management Funding Assistance Program
FY 2015-16 Local Government Funding Requests

INLET SAND BYPASSING/ INLET MANAGEMENT PLAN IMPLEMENTATION PROJECTS

Navigational inlets are critical components of the state's commercial and recreational infrastructure, but they contribute significantly to beach erosion by interrupting or altering the natural drift of sand. For this reason, the Florida Legislature has directed DEP to further commit its comprehensive beach management efforts to addressing beach erosion caused by inlets. Inlet management activities are conducted under the provisions of Section 161.161, F. S., for the purposes of evaluating the erosive impact of the inlets on adjacent beaches and recommending corrective measures to mitigate identified impacts. Such inlet management projects include, but are not limited to, inlet sand bypassing, modifications to channel dredging, jetty redesign, jetty repair, disposal of dredged material and the development, revision, adoption or implementation of an inlet management plan.

Funding for the inlet projects will be used to implement the actions recommended in the specific Inlet Management Plans (IMP) or the statewide SBMP. IMPs adopted by DEP are incorporated into the SBMP by reference along with other inlet management strategies. Feasibility studies conducted by local governments, federal and state studies and reports, and the study reports authorizing federal shore protection projects are also incorporated by reference.

In FY 2015-16, funding requests for 12 Inlet Sand Bypassing/Inlet Management Plan Implementation Projects (Inlet Projects) are included in the Beach Management Funding Assistance Program. These projects total nearly \$10 million in requested state funding. The funding priorities established by DEP must be consistent with the requirements and legislative declaration in Sections 161.101(14), 161.142, 161.143 and 161.161(1)(b), F.S.

In 2008, the Legislature amended Section 161.142, F.S., and created Section 161.143, F.S., to strengthen DEP's commitment to managing sediment around inlets. These sections directed DEP to develop and maintain sediment budgets for each inlet and ensure beach quality sand is placed on adjacent eroding beaches. It further established funding priorities and ranking criteria for inlet projects and require DEP to provide an annual inlet project list to the Legislature for funding. Program rule 62B-36, Florida Administrative Code, was amended in August 2013 to incorporate new ranking criteria specific to inlet projects. These new criteria were used in ranking projects for FY 2015-16.

The funding requirements provided in Section 161.143, F.S., also include provisions that:

- At least 10 percent of the total amount that the Legislature appropriates will be used for the three highest-ranked inlet projects;
- At least 50 percent of the funds appropriated for the feasibility and design category will be made available for inlet management projects which involve the study, design or development of an inlet management project; and
- Inlet projects may receive 75 percent state cost share for the proposed activity.

A summary funding table of inlet sand bypassing/inlet management plan implementation projects is provided herein. This summary table is followed by the beach restoration and nourishment project descriptions in the same priority order as provided in the summary funding table. Finally, descriptions of the individual inlet projects complete this document.

BEACH RESTORATION AND NOURISHMENT POST-CONSTRUCTION MONITORING

PROJECT DESCRIPTION:

This category serves to provide funding for monitoring activities associated with previously constructed projects. Eligible program activities include physical and biological monitoring required by permit.

FUNDS REQUESTED:

Funds will be used to support the following projects identified in priority order. First year monitoring required by permit is included in the construction funds on the beach projects list. "Credits" derived from the pro-ration of the post-construction monitoring list from funding shortfalls since FY 2012-13 may have been added to the FY 2015-16 list.

Project	Federal	State	Local	Total

LOCAL CONTACT: Michael Stahl

PHONE: (561) 233-2433

PROJECT DESCRIPTION:

Nourishment of approximately 2.4 miles of shoreline beginning 2.2 miles downdrift of Jupiter Inlet (R-26 - R-38). Restoration was completed in 2001 and impacted by the hurricanes of 2004 and 2005 and by Tropical Storm Fay in 2008. The first nourishment of this beach was completed in March 2010. The borrow area for this project was located approximately five miles to the South, offshore of Singer Island in approximately 70 feet of water. Due to a presence of rock in this borrow area, alternative sand sources are being evaluated for the next nourishment of this beach, scheduled for the 2015-16 construction season.

The Juno mitigation reef consists of 30 (20' x 40') rock pods for a total of 0.75 acres. The pods were constructed with 9700 tons of 3' to 4' limestone boulders. Limestone placement was completed in fall 2009 and the final inspection was conducted in the summer of 2010. In addition, 20 pre-fabricated concrete reef modules were deployed into two (20' x 40') pods consisting of 10 modules per pod. Staff has determined that 100 percent of the project is eligible for state cost sharing.

NAME OF PROJECT: Mid-Town Beach Nourishment

LOCAL SPONSOR: Town of Palm Beach

LOCAL CONTACT: Robert Weber

PHONE: (561) 383-5440

PROJECT DESCRIPTION:

Nourishment of 2.4 miles of shoreline between DEP Monuments R90.4 - R101.4 in Palm Beach County. Restoration was completed in 1995 from R95 - R100. The project included construction of eleven groins which were completed in 1996. In 2003, nourishment was completed in an expanded shoreline length between R90.4 - R101.4. The project was nourished using FEMA funds in 2006 in response to the 2004-2005 hurricane seasons and again in FY 2010-11 to repair damages sustained during Tropical Storm Fay. The next nourishment is scheduled for FY 2014-15. The project will be expanded for the next nourishment with the construction of tapers in the north and south limits. A new eligibility determination is proposed for cost sharing. Preliminary estimation is calculated as 92 percent eligible for state cost sharing (subject to verification).

FUNDS WILL BE USED FOR:

Design (reimbursement), construction and Year one monitoring.

NAME OF PROJECT: Bathtub Beach/Sailfish Point Beach Nourishment

LOCAL SPONSOR: Martin County

LOCAL CONTACT: Kathy FitzPatrick

PHONE: (772) 288-5429

PROJECT DESCRIPTION:

Nourishment of 2,950 feet of Atlantic shoreline between DEP Monuments R34.8 - R37.6 in Martin County. Dune restoration was completed in 2010 for Bathtub Beach and Sailfish Point separately, using material from the St. Lucie Inlet flood shoal. Emergency dune nourishment using upland sand sources has been conducted periodically since the restoration following storm impacts. A design analysis to determine the sustainability of combining the two segments is ongoing. Construction is anticipated for 2015. Staff has determined that 100 percent of the project is eligible for state cost sharing.

FUNDS WILL BE USED FOR:

Design.

NAME OF PROJECT: Phipps Ocean Park Beach Nourishment

LOCAL SPONSOR: Town of Palm Beach

LOCAL CONTACT: Robert Weber

PHONE: (561) 838-5440

PROJECT DESCRIPTION:

Nourishment of 1.4 miles of shoreline located between DEP Monuments R118.7 - R126 in Palm Beach County. In 2004, a 3.1 acre mitigation reef was constructed to compensate for impacts to hardbottom resources. Restoration was completed in 2006. FEMA dune restoration was completed in 2011 to repair damages sustained during Tropical Storm Fay. Dune nourishment is planned for 2014-15 in coordination with the Mid-Town project, where offshore material will be trucked to the project area. An interim project is scheduled for FY 2014-15 and a full nourishment is scheduled for FY 2015-16. An expansion of the project limits is proposed which will change the project eligibility. Staff has determined that 78 percent of the project was eligible for state cost sharing.

FUNDS WILL BE USED FOR:

Construction (2014-15 interim project), construction (2015-16 full nourishment) and Year one monitoring.

NAME OF PROJECT: Regional Monitoring

LOCAL SPONSOR: DEP

LOCAL CONTACT: Gene Chalecki

PHONE: (850) 488-7813

PROJECT DESCRIPTION:

The Regional Data Collection and Processing Program is designed to address statewide coastal erosion and change analysis and outlines the minimum data collection efforts necessary to accomplish the program goals. It includes a combination of in-house and contracted work efforts that provide for complete statewide coverage of the program jurisdictional areas on an eight-year cycle. The data collection cycle includes the acquisition and development of the following:

- Aerial Photography;
- Aerial Oblique Photography for reconnaissance and emergency response;
- Conventional topographic and bathymetric surveys;
- Laser remote sensing technologies including topographic and bathymetric data (LIDAR); and
- Computer based stereo photo modeling.

These data are used to support all aspects of the statewide beach management and coastal permitting programs, including the planning and design of beach restoration and nourishment, post-hurricane response and recovery activities and the development of the critically eroded beaches inventory. The collection and analysis of the data is coordinated with other statewide initiatives including the annual aerial digital photo acquisition initiative, U. S. Army Corps of Engineers Regional Sediment Management efforts and local government project sponsors to increase cost efficiency and avoid duplication of efforts.

FUNDS WILL BE USED FOR:

Collection and processing of bathymetric survey data in Volusia County and the Southwest region from Pinellas to Collier counties. Data acquired in Volusia County will be used to update the Ponce de Leon Inlet Management Plan.

LOCAL SPONSOR: Broward County

LOCAL CONTACT: Nicole Sharp

PHONE: (954) 519-1231

PROJECT DESCRIPTION:

Port Everglades Inlet is a man-made, federally-maintained navigation project and the entrance to Port Everglades in Broward County. DEP adopted the Port Everglades Inlet Management Plan in May 1999. The plan established an annualized bypassing objective of 44,000 cubic yards. In 2002, design of a spur groin attached to the south jetty and two groins located on the shore south the inlet (in lieu of breakwaters) was completed as recommended in the adopted inlet management plan. Construction was conducted as part of the 2005-06 Broward County Shore Protection Project - Segment III. The current project in the design phase will remove rock spoil north of the inlet and create a sand trap to initiate a bypassing protocol. Staff has determined that 100 percent of the project is eligible for state cost sharing.
