# HARD CHROMIUM ELECTROPLATING TANKS (Open Surface and Enclosed)

# Hard Chromium Electroplating Tanks at Facility

**{Chromium electroplating tank** means the receptacle or container along with the following internal and external components needed for chromium electroplating: rectifiers; anodes; heat exchanger equipment; circulation pumps; and air agitation systems. **Open surface** means the tank is ventilated at a rate consistent with good ventilation practices for open tanks. (**Enclosed** means the tank is equipped with an enclosing hood and ventilated at half the rate, or less, of an open surface tank of the same area.) **Hard chromium electroplating** means a process by which a thick layer of chromium, typically 1.3 to 760 microns, is electrodeposited on a base material.}

| Facility<br>Total |                     |                                                   |                                                       |                                                                                                |                                                                                                                                                              |                                                |                                                                        |

A Hard Chromium Electroplating Tank is considered

**Existing**; unless

□ New, because construction or *reconstruction*\* of the source commenced after 2/8/2012.

\**Reconstruction* means replacement of tank components, which were replaced to an extent that the fixed capital cost of the new components exceeded 50% of the fixed capital cost that would be required to construct a comparable new source.

Hard Chromium Electroplating Facility size:

□ Large Maximum cumulative potential rectifier capacity [Total installed rectifier capacity (amps) x 8400 (hours/year) x 0.7] is greater than or equal to 60 million ampere-hours per year (amp-hours/year).

🗌 Small

□ *Maximum cumulative potential* rectifier capacity [*Total installed* rectifier capacity (*amps*) *x* 8400 (*hours/year*) *x* 0.7] is less than 60 million ampere-hours per year (amp-hours/year); or

□ Records show that the facility's previous *annual actual* rectifier capacity was less than 60 million amphour/year, by using non-resettable amp-hour meters and keeping monthly records of actual amp-hour usage for each 12-month rolling period. The *actual cumulative* rectifier capacity for the previous 12-month rolling period shall be tabulated monthly by adding the capacity for the current month to the capacities for the previous 11 months. *If a small hard chromium electroplating facility becomes a large hard chromium electroplating facility, it must comply with the requirements for hard chromium electroplating tanks at large facilities no later than 1 year after the month in which monthly records show that the facility has become large.*

<sup>1</sup>*Chromium electroplating tank* means the receptacle or container along with the following internal and external components needed for chromium electroplating: rectifiers; anodes; heat exchanger equipment; circulation pumps; and air agitation systems. *Open surface* means the tank is ventilated at a rate consistent with good ventilation practices for open tanks. (*Enclosed* means the tank is equipped with an enclosing hood and ventilated at half the rate, or less, of an open surface tank of the same area.) *Hard chromium electroplating* means a process by which a **thick** layer of chromium (typically 1.3 to 760 microns) is electrodeposited on a base material.

<sup>2</sup> *New affected source* means the construction <u>or</u> reconstruction of the source commenced **after 2/8/2012**. *Reconstruction* means replacement of tank components, which were replaced to an extent that the fixed capital cost of the new components exceeded 50% of the fixed capital cost that would be required to construct a comparable new source.

<sup>3</sup> *Perfluorooctyl sulfonate (PFOS)-based fume suppressant* means a fume suppressant that contains 1 percent or greater PFOS by weight. Use of a PFOS-based fume suppressant is prohibited after September 21, 2015.

## **DECORATIVE CHROMIUM ELECTROPLATING TANKS and CHROMIUM ANODIZING TANKS**

- Decorative Chromium Electroplating Tanks<sup>4</sup> Using a Chromic Acid Bath<sup>5</sup>;
- Chromium Anodizing Tanks<sup>6</sup>;
- Decorative Chromium Electroplating Tanks using a Trivalent Chromium Bath<sup>7</sup> that does not incorporate a Wetting Agent<sup>8</sup> that is an Ingredient in the Trivalent Chromium Bath Components purchased as a Package; and
- Decorative Chromium Electroplating Tanks<sup>4</sup> using a Trivalent Chromium<sup>7</sup> Bath that incorporates a Wetting Agent<sup>8</sup> that is an Ingredient in the Trivalent Chromium Bath Components purchased as a Package

<sup>3</sup> *Perfluorooctyl sulfonate (PFOS)-based fume suppressant* means a fume suppressant that contains 1 percent or greater PFOS by weight. Use of a PFOS-based fume suppressant is prohibited after September 21, 2015.

<sup>4</sup> *Chromium electroplating tank* means the receptacle or container along with the following internal and external components needed for chromium electroplating: rectifiers; anodes; heat exchanger equipment; circulation pumps; and air agitation systems. *Decorative chromium electroplating* means the process by which a thin layer of chromium (typically 0.003 to 2.5 microns) is electrodeposited on a base metal, plastic, or undercoating to provide a bright surface with wear and tarnish resistance.

<sup>5</sup> Chromic Acid means the common name for chromium anhydride (CrO<sub>3</sub>).

<sup>6</sup> *Chromium anodizing tank* means the receptacle or container along with the following accompanying internal and external components needed for chromium anodizing: rectifiers fitted with controls to allow for voltage adjustments, heat exchanger equipment, circulation pumps, and air agitation systems.

<sup>7</sup> *Trivalent Chromium* means the form of chromium in a valence state of +3.

<sup>8</sup> Wetting Agent means the type of commercially available chemical fume suppressant that materially reduces the surface tension of a liquid. Use of (PFOS)-based fume suppressants<sup>3</sup> is prohibited.

<sup>3</sup> *Perfluorooctyl sulfonate (PFOS)-based fume suppressant* means a fume suppressant that contains 1 percent or greater PFOS by weight. Use of a PFOS-based fume suppressant is prohibited after September 21, 2015.

<sup>4</sup> *Chromium electroplating tank* means the receptacle or container along with the following internal and external components needed for chromium electroplating: rectifiers; anodes; heat exchanger equipment; circulation pumps; and air agitation systems. *Decorative chromium electroplating* means the process by which a thin layer of chromium (typically 0.003 to 2.5 microns) is electrodeposited on a base metal, plastic, or undercoating to provide a bright surface with wear and tarnish resistance.

<sup>5</sup> Chromic Acid means the common name for chromium anhydride (CrO<sub>3</sub>).

<sup>6</sup> *Chromium anodizing tank* means the receptacle or container along with the following accompanying internal and external components needed for chromium anodizing: rectifiers fitted with controls to allow for voltage adjustments, heat exchanger equipment, circulation pumps, and air agitation systems.

<sup>7</sup> *Trivalent Chromium* means the form of chromium in a valence state of +3.

<sup>8</sup> *Wetting Agent* means the type of commercially available chemical fume suppressant that materially reduces the surface tension of a liquid. Use of a PFOS-based fume suppressant<sup>3</sup> is prohibited after September 21, 2015.

| Use of <b>PFOS</b> -based fume suppressants <sup>3</sup> is <b>prohibited</b> . Have any been used? Yes $\Box$ No $\Box$                                                                                     |

<sup>3</sup> *Perfluorooctyl sulfonate (PFOS)-based fume suppressant* means a fume suppressant that contains 1 percent or greater PFOS by weight. Use of a PFOS-based fume suppressant is prohibited after September 21, 2015.

<sup>4</sup> *Chromium electroplating tank* means the receptacle or container along with the following internal and external components needed for chromium electroplating: rectifiers; anodes; heat exchanger equipment; circulation pumps; and air agitation systems. *Decorative chromium electroplating* means the process by which a thin layer of chromium (typically 0.003 to 2.5 microns) is electrodeposited on a base metal, plastic, or undercoating to provide a bright surface with wear and tarnish resistance.

<sup>7</sup> *Trivalent Chromium* means the form of chromium in a valence state of +3.

<sup>8</sup> *Wetting Agent* means the type of commercially available chemical fume suppressant that materially reduces the surface tension of a liquid. Use of a PFOS-based fume suppressant<sup>3</sup> is prohibited after September 21, 2015.

# MONITORING TO DETERMINE CONTINUOUS COMPLIANCE

#### FOR ALL AFFECTED CHROMIUM ELECTROPLATING AND ANODIZING TANKS

# (Except Decorative Chromium Electroplating Tanks using a Trivalent Chromium Bath *that incorporates* a Wetting Agent that is an Ingredient in the Trivalent Chromium Bath Components purchased as a Package)

# **OPERATION AND MAINTENANCE REQUIREMENTS**

(Table 1 to 40 CFR 63.342 – Summary of Operation and Maintenance Practices) For All Affected Chromium Electroplating and Anodizing Tanks

(EXCEPT DECORATIVE CHROMIUM ELECTROPLATING TANKS USING A TRIVALENT CHROMIUM BATH *THAT INCORPORATES* A WETTING AGENT THAT IS AN INGREDIENT IN THE TRIVALENT CHROMIUM BATH COMPONENTS PURCHASED AS A PACKAGE)

#### Is an operation and maintenance plan, meeting the requirements of 40 CFR 63.342(f), kept on site? Yes $\Box$ No $\Box$ Are the following applicable operation and maintenance practices complied with? Yes $\Box$ No $\Box$ Yes N/A **Control technique Operation and maintenance practices** No 1. Quarterly visual inspection of device to ensure there is proper Composite mesh-pad (CMP) drainage, no chronic acid buildup on the pads, and no evidence system of chemical attack on the structural integrity of the device? 2. Quarterly visual inspection of back portion of the mesh pad $\square$ closest to the fan to ensure there is no breakthrough of chromic acid mist? 3. Quarterly visual inspection of ductwork from tank to the $\square$ $\square$ $\square$ control device to ensure there are no leaks? 4. Perform washdown of the composite mesh-pads in accordance with manufacturers recommendations? 1. Quarterly visual inspection of device to ensure there is proper drainage, no chromic acid buildup on the packed beds, and no $\square$ $\square$ $\square$ Packed-bed scrubber (PBS) evidence of chemical attack on the structural integrity of the device? 2. Quarterly visual inspection of back portion of the chevron $\square$ $\square$ $\square$ blade mist eliminator to ensure that it is dry and there is no breakthrough of chromic acid mist? 3. Quarterly visual inspection of ductwork from tank to the control device to ensure there are no leaks? 4. Fresh makeup water added to the top of the packed bed whenever makeup water is needed? a b 1. Ouarterly visual inspection of device to ensure there is proper $\square$ $\square$ $\square$ PBS/CMP system drainage, no chronic acid buildup on the pads, and no evidence of chemical attack on the structural integrity of the device? 2. Quarterly visual inspection of back portion of the mesh pad closest to the fan to ensure there is no breakthrough of chromic acid mist? 3. Quarterly visual inspection of ductwork from tank to the control device to ensure there are no leaks? 4. Perform washdown of the composite mesh-pads in accordance $\square$ with manufacturers recommendations? 1. Quarterly visual inspection of fiber-bed unit and prefiltering device to ensure there is proper drainage, no chromic acid $\square$ $\square$ $\square$ Fiber-bed mist eliminator c buildup in the units, and no evidence of chemical attack on the structural integrity of the devices? 2. Quarterly visual inspection of ductwork from tank or tanks to $\square$ the control device to ensure there are no leaks? 3. Perform washdown of fiber elements in accordance with $\square$ $\square$ $\square$ manufacturers recommendations?

<sup>a</sup> If greater than 50 percent of the scrubber water is drained (e.g., for maintenance purposes), makeup water may be added to the scrubber basin.

<sup>b</sup> For horizontal-flow scrubbers, top is defined as the section of the unit directly above the packing media such that the makeup water would flow perpendicular to the air flow through the packing. For vertical-flow units, the top is defined as the area downstream of the packing material such that the makeup water would flow countercurrent to the air flow through the unit.

<sup>c</sup> Work practice standards for the control device installed upstream of the fiber-bed mist eliminator to prevent plugging do not apply as long as the work practice standards for the fiber-bed unit are followed.

# HOUSEKEEPING REQUIREMENTS

# FOR ALL AFFECTED CHROMIUM ELECTROPLATING AND ANODIZING TANKS

| Are all of the following applicable housekeeping practices complied with? Yes $\Box$ No $\Box$                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                      |     |             |     |  |  |  |

| (1) Inspection records for the add-on air pollution control device, if such a device is used, and monitoring equipment, to document that the inspection and maintenance required by the work practice standards of 40 CFR 63.342(f), Operation and maintenance practices, and Table 1 of 40 CFR 63.342, Summary of Operation and Maintenance Practices, have taken place. The record can take the form of a checklist and should identify the device inspected, the date of inspection, a brief description of the working condition of the device during the inspection, and any actions taken to correct deficiencies found during the inspection. |     |    |             |  |  |  |  |  |
| (2) Records of all maintenance performed on the affected source, the add-on air pollution control device, and monitoring equipment, except routine housekeeping practices;                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |     |    |             |  |  |  |  |  |
| (3) Records of the occurrence, duration, and cause (if known) of each malfunction of process, add-on air pollution control, and monitoring equipment;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |     |    |             |  |  |  |  |  |
| (4) Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.342(a)(1), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation;                                                                                                                                                                                                                                                                                                                                                               |     |    |             |  |  |  |  |  |
| (5) Other records, which may take the form of checklists, necessary to demonstrate consistency with the provisions of the operation and maintenance plan required by 40 CFR $63.342(f)(3)$ ;                                                                                                                                                                                                                                                                                                                                                                                                                                                         |     |    |             |  |  |  |  |  |
| (6) Test reports documenting results of all performance tests;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |     |    |             |  |  |  |  |  |
| (7) All measurements as may be necessary to determine the conditions of performance tests, including measurements necessary to determine compliance with the special compliance procedures of 40 CFR 63.344(e);                                                                                                                                                                                                                                                                                                                                                                                                                                      |     |    |             |  |  |  |  |  |
| (8) Records of monitoring data required by 40 CFR 63.343(c) that are used to demonstrate compliance with the standard including the date and time the data are collected;                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |     |    |             |  |  |  |  |  |
| (9) The specific identification (i.e., the date and time of commencement and completion) of each period of excess emissions, as indicated by monitoring data, that occurs during malfunction of the process, add-on air pollution control, or monitoring equipment;                                                                                                                                                                                                                                                                                                                                                                                  |     |    |             |  |  |  |  |  |
| (10) The specific identification (i.e., the date and time of commencement and completion) of each period of excess emissions, as indicated by monitoring data, that occurs during periods <i>other than</i> malfunction of the process, add-on air pollution control, or monitoring equipment;                                                                                                                                                                                                                                                                                                                                                       |     |    |             |  |  |  |  |  |
| (11) The total process operating time of the affected source during the reporting period;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |     |    |             |  |  |  |  |  |
| (12) Records of the actual cumulative rectifier capacity of hard chromium electroplating tanks at a facility expended during each month of the reporting period, and the total capacity expended to date for a reporting period, if the owner or operator is using the actual cumulative rectifier capacity to determine facility size in accordance with 40 CFR $63.342(c)(2)$ ;                                                                                                                                                                                                                                                                    |     |    |             |  |  |  |  |  |
| (13) For sources using fume suppressants to comply with the standards, records of the date<br>and time that fume suppressants are added to the electroplating or anodizing bath and<br>records of the fume suppressant manufacturer and product name;                                                                                                                                                                                                                                                                                                                                                                                                |     |    |             |  |  |  |  |  |
| (14) For sources complying with 40 CFR 63.342(e), records of the bath components purchased, with the wetting agent clearly identified as a bath constituent contained in one of the components;                                                                                                                                                                                                                                                                                                                                                                                                                                                      |     |    |             |  |  |  |  |  |
| (15) Any information demonstrating whether a source is meeting the requirements for a waiver of recordkeeping or reporting requirements, if the source has been granted a waiver under 40 CFR 63.10(f); and                                                                                                                                                                                                                                                                                                                                                                                                                                          |     |    |             |  |  |  |  |  |
| (16) All documentation supporting the notifications and reports required by 40 CFR 63.9, 63.10, and 63.347.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |     |    |             |  |  |  |  |  |

For rule cites and further information, see <u>40 CFR 63 Subpart N, National Emission Standards for Hazardous Air</u> <u>Pollutants for Chromium Emissions From Hard and Decorative Chromium Electroplating and Chromium Anodizing</u> <u>Tanks and 40 CFR 63 Subpart A, National Emission Standards for Hazardous Air Pollutants – General Provisions.</u>
