

How You Can Protect Springs

Talk to your teacher about having your classroom plant a tree. Trees act like a giant filter, helping to clean rainwater as it moves into our drinking water and springs.

Reduce plastic trash! Instead, choose reusable water bottles and bags, and recycle whenever you can.

Every drop counts, so turn off the faucet! Don't let the water run while brushing your teeth or washing your face and hands.

Never litter! Cans, bottles, plastic bags and other trash can harm animals and water quality.

Share these tips with your friends and family. We need YOU to help protect our springs and Florida's environment.

Stay on the trails when near a spring to avoid harming natural areas that help keep dirt and pollution away from the clear spring water.

Avoid stepping on underwater vegetation and kicking up spring bottom when tubing, snorkeling or swimming at springs. Doing so can destroy the plants and harm fish and wildlife habitat.

Everyone can have a positive impact on springs and water in Florida! Help protect the springs near your home by following these tips.
