

# Recycled Water

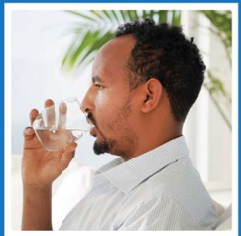

## What is Potable Reuse?

Potable reuse refers to highly treated recycled water from various sources people can use for drinking, cooking or bathing.

## Is Recycled Water Safe for People to Drink?

Yes. This type of water treatment uses proven technologies that make the water meet or exceed all federal drinking water standards.

## Why Should Recycled Water Be Added to Florida's Water Supply?

Florida is growing at a record pace, with an estimated 1,000 people moving to the state daily. Floridians use nearly 6.4 billion gallons of water per day. We need an additional 1 billion gallons of water per day by 2040. Recycled water can help ensure there is plenty of water for everyone.
