

STORET

STORET is an acronym for STORage and RETrieval database. While U.S. EPA designed STORET as a national water quality database, Florida utilized this system to manage chemical, biological, and physical water quality data. Florida's STORET database was retired in 2017 and replaced by the Watershed Information Network (WIN) database.

STORET Public Access (SPA)

Legacy Florida STORET data are available for download using the [STORET Public Access \(SPA\)](#) site. Data will not be migrated to WIN since they do not meet WIN Minimum Data Quality Standards (MDQS).
